We can also conclude that mostly 2 questions will be asked from this chapter. Life Processes Class 10 Revision & Important Questions During the process of inhalation, the lungs get filled up with air as ribs are lifted up and the diaphragm is flattened. Air is sucked into the lungs and fills the expanded alveoli. Each lung contains 300-400 million alveoli. These numerous alveoli increase the surface area for gaseous exchange making the process of respiration more efficient.
