Flexibility: Digital communication systems can transmit real-valued discrete-time signals, which could be analog ones obtained by analog-to-digital conversion, and symbolic-valued ones (computer data, for example). Analog vs digital communication - UK Essays Definition: Analog and digital communications are the two types of data transmission system however several factors generate the difference between the two. The major difference between analog and digital communication lies in

the signal being transmitted. In analog communication, the message signal is in analog form i.e., continuous time signal. Analog Communication is the technology which uses Analog signal for the transmission of information. Digital Communication is the technology which uses digital signal for the transmission of information.
