Pharmacology for Health Professionals -
eBook Frontiers Media SA

Widely considered the premier text in
pediatric infectious diseases, Feigin and
Cherry's Textbook of Pediatric Infectious
Diseases, 9th Edition, provides

authoritative, up-to-date coverage of this
rapidly changing field. Extensively
revised by Drs. James Cherry, Sheldon L.
Kaplan, Gail J. Demmler-Harrison,
William J. Steinbach, Peter J. Hotez, and
new editor John V. Williams, this two-
volume reference delivers the
information you need on epidemiology,
public health, preventive medicine,
clinical manifestations, diagnosis,
treatment, and much more. It serves as
a reliable, everyday resource for
practicing ID specialists, and an
invaluable reference for medical

students, residents, and fellows in ID, pediatricians and internists, and others who work with neonates, children, and adolescents or in public health. - Discusses infectious diseases according to organ systems that may be affected, as well as individually by microorganisms, placing emphasis on clinical manifestations that may be related to the organism causing the disease. - Provides detailed information regarding the best means to establish a diagnosis, explicit recommendations for therapy, and the most appropriate uses of diagnostic imaging. - Includes expanded information on Q fever, antibiotic resistance and antibiotic agents, human coronaviruses, pox viruses, and infections in the compromised host, and contains new

COVID-19 content across numerous chapters. - Features a new chapter on antimicrobial stewardship, and new coverage of antivirals for pox viruses. - Reflects today's more aggressive infectious and antibiotic-resistant organisms as well as emerging and re-emerging infectious diseases. - Contains hundreds of full-color images (many are new!), including clinical photos, radiographic images, drawings, charts, and graphs. - Enhanced eBook version included with purchase. Your enhanced eBook allows you to access all of the text, figures, and references from the book on a variety of devices. Additional digital ancillary content may publish up to 6 weeks following the publication date. - Any additional digital ancillary content may publish up to 6 weeks

following the publication date.

Textbook of Immunology Frontiers Media SA

Written by two leaders in the field of pediatric dermatology, this classic text provides both detailed content for the specialist and easily accessible information for the non-dermatologist and less experienced clinician. Paller and Mancini - Hurwitz Clinical Pediatric Dermatology, 6th Edition, comprehensively covers the full range of skin disorders in children, offering authoritative, practical guidance on diagnosis and treatment in a single volume. This award-winning, evidence-based text has been fully revised and updated, and is an essential resource for anyone who sees children with skin disorders. - Features new content outline

boxes for faster navigation, hundreds more clinical images, and authors' tips for the diagnosis and treatment of pediatric skin diseases. - Contains updated, evidence-based guidance and the latest drug developments and disease classifications. - Provides a careful balance of narrative text, useful tables, and 1,300 high-quality clinical photographs, helping you recognize virtually any skin condition you're likely to see. - Includes a greatly expanded discussion of atopic dermatitis and psoriasis and new therapeutic approaches for treating genetic disorders and systemic diseases such as ichthyoses and rheumatologic disorders. - Discusses new tests for subclassifying disease, such as the myositis-specific antibodies of juvenile dermatomyositis,

genotyping, and immunophenotypes of inflammatory skin disorders. - Contains new and updated tables on psoriasis comorbidities, genetic syndrome classifications, acne therapies, pediatric histiocytoses, PHACE syndrome criteria, HSV therapies and juvenile dermatomyositis. - Features updated sections on infections, exanthems, vascular disorders, dermatoses and genodermatoses. - Discusses hot topics such as the use of stem cell and cell therapy, as well as recombinant protein, for treating epidermolysis bullosa; the resurgence of measles; congenital Zika virus infections; and much more.

Selected References on Environmental Quality as it Relates to Health CRC Press

This best-selling resource has a worldwide reputation as the leader in its

field. Focusing on human immunology and biology, while also reporting on scientific experimentation and advancement, it provides comprehensive coverage of state-of-the-art basic science as well as authoritative guidance on the practical aspects of day-to-day diagnosis and management. This new edition includes 700 full-color illustrations and a new, more accessible format to make finding information a snap for the busy practitioner. Includes a glossary of allergy and immunology for quick and easy reference. Contains keypoints and clinical pearls highlighted to find important information quickly. links to useful online resources both for you and for your patients. Offers contributions from hundreds of international authorities for world-class

expertise in overcoming any clinical challenge. Contains 400 new illustrations, 700 in all, to better illustrate complex immunology. Covers the very latest in the field, including hot topics such as food allergy and immunotherapy. Includes the latest guidelines from The National Asthma Education and Prevention Program (NAEPP). Utilizes a new, more user-friendly full-color format for easier reference.

Novel clinical applications of extracellular vesicles Academic Press

The first book ever on the much maligned nettles of the world presents a story of these followers of mankind and his cattle throughout history. This study centres on the most abundant and sub-cosmopolitan common stinging nettle

(*Urtica dioica*), but also deals with other nettles throughout the world. Tropical tormentors rich in species include the notorious nettle trees with their formidable stings which fascinated the Europeans after their discovery by botanists on the round-the-world trips of exploration in the 17-19th centuries. Many people on their travels will have met the nettle trees of the Indo-Malay region and other stinging nettles in North and South America, India, etc., which sting and have beautiful flowers but are called nettles; these are also dealt with. The first microscopists and their descriptions of the beautiful stinging hair; the uncovering of the mechanism of its action and the more recent elucidation of the toxins causing the characteristic symptoms is a

fascinating one and takes up 3 chapters. The book includes the 100 major scientific works published on the common stinging nettle and never brought to the notice of the general public before. The author spent six years studying the ecology of the nettle patch, its invertebrate herbivores (mainly insects) and vertebrate herbivores (cattle, deer, etc.,) and their interactions with other plants: its secret life is recorded in line drawings and photographs (1000+ individual items). It was not possible to publish these in colour but they are in full colour on a CD-ROM (300 dpi) at the back of the book. Covered also are nettle folklore, fibre use in World War I & II, as a food, fodder, herbal medicine, growth as a competitor plant, habitats, sex (unique exploding

stamens), breeding systems, variation, evolution etc.!! Some the world's most beautiful butterflies would not exist without nettles.

H1 and H2 Histamine Receptors Food & Agriculture Org.

Monthly, with annual subject and author indexes. Worldwide coverage of journal articles, papers presented, and books focused primarily on basic research in vertebrate and invertebrate neurosciences. Arranged under broad topics, e.g., genetics, sleep, and neurophysiology, as well as miscellaneous topics, book notices, and proceedings. Author, subject indexes. *Federation Proceedings* Createspace Independent Publishing Platform "Pharmacology for Health Professionals provides a comprehensive introduction

to important pharmacology principles and concepts, with a strong focus on therapeutics." "The text has been extensively updated to reflect the latest information on the clinical use of drugs, local aspects of scheduling, drug legislation and ethics." -- Book Jacket.

Fish and Fishery Products Analysis

Elsevier Health Sciences

While the vast majority of our food supplies are nutritious and safe, foodborne pathogen-related illness still affects millions of people each year. Large outbreaks of foodborne diseases—such as the recent salmonella outbreak linked to various peanut butter products—continue to be reported with alarming frequency. All-Encompassing Guide to Detecti

INIS Atomindeks Springer Nature

The Bad Bug Book 2nd Edition, released in 2012, provides current information about the major known agents that cause foodborne illness. Each chapter in this book is about a pathogen—a bacterium, virus, or parasite—or a natural toxin that can contaminate food and cause illness. The book contains scientific and technical information about the major pathogens that cause these kinds of illnesses. A separate “consumer box” in each chapter provides non-technical information, in everyday language. The boxes describe plainly what can make you sick and, more important, how to prevent it. The information provided in this handbook is abbreviated and general in nature, and is intended for practical use. It is not intended to be a comprehensive

scientific or clinical reference. The Bad Bug Book is published by the Center for Food Safety and Applied Nutrition (CFSAN) of the Food and Drug Administration (FDA), U.S. Department of Health and Human Services.

Molecular Detection of Foodborne Pathogens Trafford Publishing

Handbook of Hormones: Comparative Endocrinology for Basic and Clinical Research collates fundamental information about the structure and function of hormones from basic biology to clinical use. The handbook offers a rapid way to obtain specific facts about the chemical and molecular characteristics of hormones, their receptors and signalling pathways, and the biological activities they regulate. The evolution of hormones and gene

families is also covered both in the text and in online ancillaries. Users will find simple and visual ways to learn key molecular information. Chapters and online ancillary resources integrate additional sections, providing a comparative molecular, functional, and evolutionary consideration. - Provides the only single resource available with concise, yet informative descriptions of hormones in vertebrates, invertebrates, and plants - Presents hormones in groups according to their origin, so that readers can easily understand their inter-relation - Includes comparative information on the structures and functions of hormones enabling readers to understand both general and specific actions in and across species - Ancillary website hosts additional information,

including sequence data, comparative data, figures, and tables

Current Bibliography of Epidemiology

Elsevier Health Sciences

- All content revised and updated with more succinct chapters reduced by approximately 15% - A suite of animations support readers' understanding of common drug interactions - Key Points boxes provide a snapshot of important information to reinforce readers' learning - Updated drug names to align with international harmonisation of medicines information and recommendations by the Therapeutic Goods Administration - National and international guidelines are referenced - Expanded 'Mechanism of Action' for some drugs and drug classes - Update of therapeutic areas with new

drug classes, e.g. cancer chemotherapy, antivirals and cardiac drugs - New information on clinically relevant drug interactions - Now includes an eBook with all print purchases

Current List of Medical Literature

Elsevier Health Sciences

Met behulp van wiskundige modellen wordt een voorspelling gegeven van de productie van histamine, waarbij rekening is gehouden met bederf door temperatuursinvloeden tijdens bewaring, invloeden door bevriezing, door vertraagde bevriezing, het schoonmaken van de vis, inblikken en andere conserveermethodes

Handbook of Hormones Elsevier Australia

Includes section, "Recent book acquisitions" (varies: Recent United

States publications) formerly published separately by the U.S. Army Medical Library.

Middleton's Allergy E-Book John Wiley & Sons

This novel and informative book discusses the various aspects of seafood quality. The book is divided into 7 broad sections, each tackling a different aspect. The first section covers the general aspects relevant to the nutritional quality of the fish and the various extraction protocols for macro-/micro-nutrients. The second section provides insights into handling and the principles of thermal and non-thermal processing techniques for commercially important fishery products. The quality standards and safety concerns in the seafood industry and consumption are

discussed in this section. The freshness indices of the processed products including biochemical, microbiological and toxicological characteristics are also included. The third section discusses the physico-chemical characteristics and quality parameters of potable water/ ice. The fourth section includes the quality assessment of various toxicants related to seafood products. The fifth section deals with the specific aspects such as principle, instrument and procedures of conventional and novel analytical instruments relevant to the seafood industry. The sixth section deals with the seafood waste management including solid and liquid seafood wastes. Presently, there is a great awareness regarding environmental sustainable processing/ preservation techniques. The

final chapter discusses the bioactive compounds from under-utilized marine sources showing pharmaceutical/ nutraceutical applications.

The American Review of Respiratory Disease

The third edition of the unparalleled reference on natural ingredients and their commercial use This new Third Edition of Leung's Encyclopedia of Common Natural Ingredients: Used in Food, Drugs, and Cosmetics arrives in the wake of the huge wave of interest in dietary supplements and herbal medicine resulting from both trends in health and the Dietary Supplement and Health Education Act of 1994 (DSHEA). This fully updated and revised text includes the most recent research findings on a wide variety of ingredients,

giving readers a single source for understanding and working with natural ingredients. The Encyclopedia continues the successful format for entries listed in earlier editions (consisting of source, description, chemical composition, pharmacology, uses, commercial preparations, regulatory status, and references). The text also features an easily accessible alphabetical presentation of the entries according to common names, with the index cross-referencing entries according to scientific names. This Third Edition also features: More than 50 percent more information than the Second Edition, reflecting the greatly increased research activity in recent years A new section on traditional Indian medicine, with information on nine commonly used

herbs More than 6,500 references Two new appendices explaining and illustrating the botanical terminology frequently encountered in the text A revised and expanded index Leung's Encyclopedia of Common Natural Ingredients: Used in Food, Drugs, and Cosmetics, Third Edition will continue to provide a comprehensive compilation of the existing literature and prominent findings on natural ingredients to readers with an interest in medicine, nutrition, and cosmetics.

Cotton Dust

During the last years, the research on extracellular vesicles (EVs) has raised giving new insights into pathophysiology of several diseases. EVs are membrane-bound particles secreted by almost all cell types. Depending on their biogenesis

and size they include exosomes, microparticles / microvesicles and apoptotic bodies. Characteristically, EVs carry markers from the source cell membrane and contain genetic material, lipids and proteins inside. They are known to play a role in cell-to-cell communication and to produce genotypic and phenotypic modifications in the target cell including: antigen presentation, apoptosis induction, cellular activation, inhibition or differentiation. In particular, increasing concentrations of EVs have been found in many diseases such as cancer, autoimmune and cardiovascular diseases, among others. Most of the studies in EVs are focused on the characterization of EVs compounds, identifying mechanism of action, their

potential use as biomarkers, and few of them investigate a therapeutic usage. However, there are some issues to be achieved on the path to their clinical application. This research topic offers a common place to discuss current and novel clinical applications of EVs pointing on future directions. We encouraged the submission of original articles, reviews, hypothesis, controversies, future perspectives and personal viewpoints on the following topics of interest, but not limited to:

- Contribution of EVs to better understand the pathology of immunological diseases.
- Standardization of isolation and quantification protocols in the daily

clinical practice.

- Possible applications of EVs as clinical biomarkers (diagnostic, prognostic and evolution marker).
- Therapeutic role of EVs being vehicles of specific cargo: current clinical trials?
- Novel immunological functions of EVs.

Skin Autoimmunity

Monthly. Bibliography of MEDLARS-based journal articles that describe perturbations in the ecosystems important to health. For the most part, genetic and clinical literature not included. Index medicus format; author, subject sections.

Interferon Bibliography from MEDLARS
