The Systematic Design of Instruction Solution Tree Press
 Economic globalization has led to intense debates about the competitiveness of nations. Prosperity, social justice, and welfare are now seen to depend on the creation of a 'high skilled' workforce. This international consensus around high skills has led recent American presidents to claim themselves 'education presidents' and in Britain, Tony Blair has announced that 'talent is 21st-century wealth'. This view of knowledge-driven capitalism has led all the developed economies to increase numbers of highly-trained people in preparation for technical, professional, and managerial employment. But it also harbours the view that what we regard as a 'skilled' worker is being transformed. The pace of technological innovation, corporate restructuring, and the changing nature of work require a new configuration of skills described in the language of creativity, teamwork, employability, self-management, and lifelong learning. But is this optimistic account of a future of high-skilled work for all justified? This book draws on the findings of a major international comparative study of national routes to a 'high skills' economy in Britain, Germany, Japan, Singapore, South Korea, and the United States, and includes data from interviews with over 250 key stakeholders. It is the first book to offer a comparative examination of 'high skill' policies -- a topic of major public debate that is destined to become of even greater importance in all the developed economies in the early decades of the twenty-first century.

 This second edition of Project-Based Learning (PBL) presents an original approach to Science, Technology, Engineering and Mathematics (STEM) centric PBL. We define PBL as an "ill-defined task with a well-defined outcome," which is consistent with our engineering design philosophy and the accountability highlighted in a standards-based environment. This model emphasizes a backward design that is initiated by well-defined outcomes, tied to local, state, or national standard that provide teachers with a framework guiding students' design, solving, or completion of ill-defined tasks. This book was designed for middle and secondary teachers who want to improve engagement and provide contextualized learning for their students. However, the nature and scope of the content covered in the 14 chapters are appropriate for preservice teachers as well as for advanced graduate method courses. New to this edition is revised and expanded coverage of STEM PBL, including implementing STEM

PBL with English Language Learners and the use of technology in PBL. The book also includes many new teacher-friendly forms, such as advanced organizers, team contracts for STEM PBL, and rubrics for assessing PBL in a larger format.

 Contextual teaching and learning (CTL) is a system for teaching that is grounded in brain research. Brain research indicates that we learn best when we see meaning in new tasks and material, and we discover meaning when we are able to connect new information with our existing knowledge and experiences. Students learn best, according to neuroscience, when they can connect the content of academic lessons with the context of their own daily lives. Johnson discusses the elements of the brain-compatible contextual teaching and learning system: making meaningful connections; investing school work with significance; self-regulated learning; collaboration; critical and creating thinking; nurturing the individual; reaching high standards; and using authentic assessment. Drawing on the practices of teachers in kindergarten through university, Johnson provides numerous examples of how to use each part of the CTL system.

 A comprehensive reference text that examines how the three aspects of language (genre, text and grammar) can be used as resources in teaching and assessing writing. It provides an accessible account of current theories of language and language learning, together with practical ideas for teaching and assessing the genres and grammar of writing across the curriculum.
STEM Project-Based Learning Springer Science & Business Media
 Engaging and motivating students--especially the least motivated learners--is a daily challenge. But with the process of problem-based learning (PBL), any teacher can create an exciting, active

classroom where students themselves eagerly build problem-solving skills while learning the content necessary to apply them. With problem-based learning, students' work begins with an ill-defined problem. Key to this problem is how it explicitly links something important in students' daily lives to the classroom. This motivational feature is vital as students define the what, where, and how of resolving the problem situation. Problem-based learning may sound potentially chaotic and haphazard, but it rests on the firm foundation of a teacher's work behind the scenes. The teacher develops a problem long before students see it, specifically choosing the skills and content the problem will emphasize and matching those to curriculum and standards. Though a PBL problem will have no "right" answer, the teacher structures the experience so that specific learning takes place as students generate the problem-solving steps, research issues, and produce a final product. The teacher guides without leading, assists without directing. Note: This product listing is for the Adobe Acrobat (PDF) version of the book.

Effective Instructional Strategies UMSurabaya Publishing

This book deals with large-scale or macro-level instructional design, which is referred to by other authors variously as curriculum development, course design, training system design or instructional systems design. The emphasis throughout the book is on the application of a systems approach, which implies both a way of thinking about the problem and a methodology for seeking and developing solutions. Thus the approach of the book is problem-oriented. The successful problem-solver requires more than a technique or procedure. He requires experience of similar problems, some general principles that he can apply to the class of problems and a great deal of creativity to develop an optimal method of solving each problem. This book brings together the theories and practical experience that have been built up by instructional technologists over the last two decades, the techniques that are currently most used for the analysis of problems in education and for their solution, and a range of new ideas specially developed by the author to encourage the creative element (so often missing from educational materials). This book is intended for anyone involved in instructional design. It is designed on a 'grid' structure to facilitate the reader's choice of chapters. Those who wish to gain a general overview may concentrate on the chapters at the theory base and analysis levels. Those more practically concerned with course design will find much of use in the synthesis and evaluation levels. Those who wish simply to discover 'what's new' in this book and its treatment of instructional design will find what they are seeking principally in the analysis and evaluation levels.

Belajar Tanpa Ujian? Benarkah belajar bisa tanpa ujian? Atau justru ada yang bertanya, buat apa belajar bila tidak ada ujian? Pepatah lama yang sering dilontarkan tentang perbedaan sekolah

dan kehidupan. Di sekolah, siswa belajar kemudian ujian. Di kehidupan, siswa ujian kemudian belajar. Pepatah itu adalah sindiran terhadap praktik belajar di sekolah yang mengkeramatkan ujian sebagai segala-galanya. Tanpa ujian, buat apa belajar? Padahal belajar adalah kemauan dan kemampuan alami manusia, yang telah ada sejak kita lahir. Jadi tanpa ada ujian pun, kita secara alami tetap belajar. Justru ketika ujian menjadi motivasi belajar, maka kita kehilangan kenikmatan belajar. Belajar jadi terpaksa semata mengejar nilai ujian. Selesai ujian, semua materi pelajaran dilupakan. Pada edisi ini, para guru berbagi praktik cerdas melakukan asesmen otentik. Proses ujian yang bermakna dan menyenangkan sebagaimana proses belajar itu sendiri. Bila membaca tulisan dan melihat fotonya, anda akan menyaksikan anak-anak yang bergembira mengikuti ujian. Seolah mereka tidak sedang ujian. Seolah mereka belajar tanpa ujian. Pada akhirnya, mari membaca dan belajar. Bila memang ada hal baik dari surat kabar ini, praktikkan dan sebarkan ke rekan guru yang lain.
