At first glance, public transport in the majority of cities and regions around the world would not be considered high-tech by most passengers. However, when taking a closer look at the systems that are necessary to attract/retain passengers and ensure efficient operations, the importance of IT and the high-tech nature of the public transport sector becomes clear. Transport operators use advanced information technology products in order to plan, optimise and manage their fleets and staff. Sophisticated software systems support and drive these tasks. Furthermore, these systems are used to manage daily operations, which includes monitoring and dispatching of rolling stock and crew, providing passengers with realtime information, electronic ticketing and much more. As in many industries, public transport and associated IT standards vary around the world. Several operators have invested significantly in public transport, while others have a great deal of catching

up to do. Strategic investments in public transport can significantly improve the quality of life in cities and regions. IT systems play a vital role in supporting this aim. Why write this book? For what purpose and for which audience? Above all, this book is intended for those who develop, implement and operate public transport IT systems. These readers need to be familiar with the software and understand public transport IT systems both at a high level and in detail. This is achieved through descriptions of public transport business processes and a detailed illustration of a comprehensive systems data model. Furthermore, the book was written for professors and students of transport and IT, at universities and other institutes of higher education. Finally, the book is intended for those in the public transport industry who use these systems and want, or need, to understand the systems in further detail.

Designing and Conducting Business Surveys provides a coherent overview of the business survey process, from start to finish. It uniquely integrates an understanding of how businesses operate, a total survey error approach to data quality that focuses specifically on business surveys, and

sound project management principles. The book brings together what is currently known about planning, designing, and conducting business surveys, with producing and disseminating statistics or other research results from the collected data. This knowledge draws upon a variety of disciplines such as survey methodology, organizational sciences, sociology, psychology, and statistical methods. The contents of the book formulate a comprehensive guide to scholarly material previously dispersed among books, journal articles, and conference papers. This book provides guidelines that will help the reader make educated trade-off decisions that minimize survey errors, costs, and response burden, while being attentive to survey data quality. Major topics include: • Determining the survey content, considering user needs, the business context, and total survey quality • Planning the survey as a project • Sampling frames, procedures, and methods • Questionnaire design and testing for self-administered paper, web, and mixed-mode surveys • Survey communication design to obtain responses and facilitate the business response process • Conducting and managing the survey using paradata and project management tools • Data processing, including capture, editing, and imputation, and dissemination of statistical

outputs Designing and Conducting Business Surveys is an indispensable resource for anyone involved in designing and/or conducting business or organizational surveys at statistical institutes, central banks, survey organizations, etc.; producing statistics or other research results from business surveys at universities, research organizations, etc.; or using data produced from business surveys. The book also lays a foundation for new areas of research in business surveys. *Innovation, Entrepreneurship and Sustainability* diplom.de

Containing research from the 25th edition of the Urban Transport conference, the papers included in this book address the need to solve important pollution problems associated with urban transport. There is also a growing need for integration with telecommunications systems and IT applications in order to improve safety, security and efficiency.

The ICEBE conference in Windhoek is the sixth in a series of annual conferences on engineering and business education. It is organized by the Robert-Schmidt-Institute (University Wismar), hosted by Polytechnic of Namibia and co-organised by University of Applied Sciences Jena. The conferences were held in Sibiu (Romania), Manila (Philippines), Cape Town (South Africa) and Wismar (Germany). The theme of the Windhoek Conference is "Innovation, Entrepreneurship and Sustainability which describes the emphasis that is laid on always using these three terms in combination, i.e., not to consider one in isolation from the others. Thus the primary target of this conference is to provide the delegates with cross-disciplinary thinking related to the three main streams in engineering and business education.

Become Part of a Champion Industry that Overpowers Even the Toughest Economic Crises. Take a minute of your time, and look around you. Notice the furniture, gadgets, books, and all the other stuff you have lying around your home or office. Chances are, the majority of those items came to you by truck. E-commerce has changed the way we buy and sell things, especially in the light of current global events. This, in turn, has created a huge, global demand for transport carriers, especially motor carriers. The trucking industry has been flourishing and growing for some time now, and it will continue to do so, according to a market research report from Technavio. They predict that the global market size will reach an impressive \$41.47 billion by 2024. This extremely favorable forecast provides a fantastic opportunity for those who wish to become a part of this lucrative industry. Large trucking companies own a significant portion of that cake, but a huge amount of transport in the US is handled by freight brokers. In fact, the demand for these cargo intermediaries has risen exponentially throughout 2020, and market analysis shows that this is the perfect time to break into a freight industry. But there is a catch. Many have already recognized this amazing opportunity, and the number of independent freight brokers is increasing. Luckily, the market is so huge that there's enough room for more, but competition is a factor that needs to be considered. This is why those who are considering to venture into the freight broker industry need to tread carefully, and take certain steps to ensure not only a great start to their business, but the potential to grow and expand. In *Freight Broker Business Startup 2021*, you will discover: Bulletproof freight brokerage business strategies, modeled after the latest market and industry analysis Detailed instructions for finding a profitable niche and conducting micro marketing for generating maximum profit A comprehensive guide through start-up costs and expenses, to help you invest your money smartly, and avoid unnecessary expenses How a bad business plan (or lack of it) can make your business fail before it even starts -- and a simple, effective template for writing one Helpful and proven tips and advice for finding customers -- shippers and carriers, and establishing a pool of long-term, steady clients A list of every form and license you'll need to obtain to start this business, including a guide through the best current Transportation Management System softwares Marketing strategies and networking tools, to help you understand exactly what your customers want, and how to provide it And much more. What makes the freight broker industry so desirable is its simplicity. No matter your background, education, or experience, you can succeed in this market and create a profitable business from scratch. If you're ready to become a successful freight broker, then scroll up and click the "Add to Cart" button right now.

Inhaltsangabe:Introduction: Estimating the cost of equity capital has two major implications. First, it reflects the return to a company's stock which an equity investor expects to receive from his investment. He makes his decision upon whether he could earn a higher rate of return in an alternative investment of equivalent risk. Second, a company must earn the cost of capital (both debt and equity) through its undertaken projects. It is hence relevant for decisions on undertaking positive net present value projects which are of similar risk as the company's average business activities. It also substantially influences the pricing of an entire firm as far as the valuation is based on a discounted cash flow model. A lot of effort has been done in the past to achieve accurate models which precisely determine this cost. Building on the modern portfolio theory of Harry Markowitz, a widely used and commonly known model in this context is the Capital Asset Pricing Model (CAPM). Introduced by several researchers in the 1960s, it is still one of the most applied methods for practitioners. However, it suffers from several shortcomings, including statistical caveats, economic assumptions, the absence of market frictions and the behaviour of market participants. An upgrade to this model was provided by Stephen Ross which has resulted in the Arbitrage Pricing Theory (APT). It combines several risk factors in addition to one market proxy, as it is the case in the CAPM, and is less restrictive in its assumptions. But both CAPM and APT require observable market data, i.e. stock prices, of the analysed companies. These models thus only work for publicly listed firms. If research should be done on non-traded companies, however, an alternative methodology must be applied. In general, data from the balance sheet, the income statement and the cash flow statement are available for both listed and non-listed companies. While accounting data have widely been used in the past as well and have been assumed to provide valuable information in explaining stock returns, this line of research has dissipated over time. Only a few key figures, such as size and financial leverage, are still considered to be relevant. However, they can be used to indirectly estimate a firm's beta by assessing their explanatory power in a CAPM or APT framework. This methodology is particularly beneficial for firms which are not listed because there cannot be observed any stock price movements. [...]

Modeling of Transport Demand explains the mechanisms of transport demand, from analysis to calculation and forecasting. Packed with strategies for forecasting future demand for all transport modes, the book helps readers assess the validity and accuracy of demand forecasts. Forecasting and evaluating transport demand is an essential task of transport professionals and researchers that affects the design, extension, operation, and maintenance of all transport infrastructures. Accurate demand forecasts are necessary for companies and government entities when planning future fleet size, human resource needs, revenues, expenses, and budgets. The operational and planning skills provided in *Modeling of Transport Demand* help readers solve the problems they face on a daily basis. *Modeling of Transport Demand* is written for researchers, professionals, undergraduate and graduate students at every stage in their careers, from novice to expert. The book assists those tasked with constructing qualitative models (based on executive judgment, Delphi, scenario writing, survey methods) or quantitative ones (based on statistical, time series, econometric, gravity, artificial neural network, and fuzzy methods) in choosing the most suitable solution for all types of transport applications. Presents the most recent and relevant findings and research - both at theoretical and practical levels - of transport demand Provides a theoretical analysis and formulations that are clearly presented for ease of understanding Covers analysis for all modes of transportation Includes case studies that present the most appropriate formulas and methods for finding solutions and evaluating results

Inhaltsangabe:Introduction: Coming together is beginning. Keeping together is process. Working together is success. Henry Ford. Raising global competition, increasing customer demand, requests to deliver just-in-time, and an increasing pressure to cut costs are only a few examples to express

the need for more flexibility, speed and agility of organizations. Companies in different industry segments can achieve this requirement by flexible organizational structures, a knowledgeable and motivated workforce, and the application of technology and communication media. In this context the composition of teams plays an important role because it has proven to be a fast and comprehensive way to solve problems, to fulfill customer demand, and to develop new products and processes. Over the past decade the construct of teams has further developed into so called virtual teams. Virtual teams are teams which include team members who work together remotely from various locations around the globe. Lipnack and Stamps (1997) characterize virtual teams as the peopleware for the 21st century. The modality of working in virtual teams becomes more popular as the world's population becomes more connected. Research proposes that virtual teams are as effective as traditional teams. Virtual teams offer the opportunity to meet the challenges of cost effectiveness, product quality, and speed in an international setting that is driven by customer orientation and a rapidly changing economy. Furthermore, people with the most experience and knowledge for a specific business topic can be brought together no matter where they are located in the world. In a virtual team setting, modern communication technology plays an important role because it brings together the virtual team members that are located in various places around the globe. Formerly, members of a traditional team had many opportunities to meet in-person to discuss business and project issues. But with team members working from distributed locations, meeting in-person is hindered. In such cases a team depends heavily on communication technology that offers some kind of substitution for meeting in-person. Video conferencing has long been known as one option to meet distributed team members face-to-face. Baker (2002) concludes in his study that video conferencing is the best way of communication in virtual teams. Because traditional video conferencing had its limitations, vendors lately have introduced telepresence [...]

The Holy Grail for most organisations is the successful attainment, and retention, of inimitable competitive advantage. This book addresses the question of how to leverage the unique intangible assets of an organisation: its explicit, implicit, acquired and derived knowledge. The refreshingly innovative concept of Intelligence-Based Competitive Advantage® is one which will eclipse the cost-driven and resource-reduction attitudes most prevalent in the first decade of this century. Tomorrow's organisation will need to derive IBCA® through the expert execution of bespoke competitive intelligence practice, unique analytical processes, pioneering competitive strategy formulation, and timely execution of all three, if they are to succeed. This volume consists of insights from Competitive Intelligence practices at both country and organisational level, Competitive Analysis processes within the firm and within challenging sector and economic environments and Competitive Strategy formulation in profit, non-profit, real and virtual world contexts. It is essential reading for anybody wishing to gain a formal understanding of the practical and intellectual challenges which will face organisations in the future as they strive to achieve strategic foresight and Intelligence-Based Competitive Advantage. This book presents latest research on the evolution of consumer services, as these services continue to become a larger part of the economy in the world. Four core focal points lead the central message of the book: first, the convergence of back and front offices; second, placing the client as a fundamental input of services production and delivery process, and 'industrializing' the customers' role to combine efficiency and experience; third, the constitution and role of inputs necessary for the configuration, production and delivery of the service, with the crucial role of

'operationalizing' the customers' experience; and fourth, the adoption of new technologies and the appropriate transfer of manufacturing managerial practices through service industrialization. This is a special volume of articles based on solid research and analysis, including conceptualization of the important issues, as well as recommendations for managers. It presents case histories and managerial practices in some key sectors, such as financial services, health care, tourism/hospitality, entertainment and media, online services and home and personal services
