For the last 20 years, the Innocenti Report Card series has led the way in comparing children's well-being across rich countries. Report Card 16 develops this further through a multi-level approach to show that children's well-being is influenced by children's own actions and relationships, by the networks and resources of their caregivers, and by public policies and the national context. This approach is aligned with the 1989 United Nations Convention on the Rights of the Child, in that it recognizes the responsibilities of governments, families and communities to help realize children's rights and promote their well-being.

Quantum Mechanics, Volume 3 David R. Godine Publisher

"...a daunting triumph of will pushing its way through imposing roadblocks to a magical country, an absurdist nirvana of humor, pathos, and loss."--

Time magazine A Void is a metaphysical whodunit, a story chock-full of plots and subplots, of trails in pursuit of trails, all of which afford Perec occasion to display his virtuosity as a verbal magician. It is also an outrageous verbal stunt: a 300-page novel that never once employs the letter E. The year is 1968, and as France is torn apart by social and political anarchy, the noted eccentric and insomniac Anton Vowl goes missing. Ransacking his Paris flat, his best friends scour his diary for clues to his whereabouts. At first glance these pages reveal nothing but Vowl's penchant for word games, especially for "lipograms," compositions in which the use of a particular letter is suppressed. But as the friends work out Vowl's verbal puzzles, and as they investigate various leads discovered among the entries, they too disappear, one by one by one, and under the most mysterious circumstances . . .

Over the last few decades, research, activity, and funding has been devoted to improving the recruitment, retention, and advancement of women in the fields of science, engineering, and medicine. In recent years the diversity of those participating in these fields, particularly the participation of women, has improved and there are significantly more women entering careers and studying science, engineering, and medicine than ever before.

However, as women increasingly enter these fields they face biases and barriers and it is not surprising that sexual harassment is one of these barriers. Over thirty years the incidence of sexual harassment in different industries has held steady, yet now more women are in the workforce and in academia, and in the fields of science, engineering, and medicine (as students and faculty) and so more women are experiencing sexual harassment as they work and learn. Over the last several years, revelations of the sexual harassment experienced by women in the workplace and in academic settings have raised urgent questions about the specific impact of this discriminatory behavior on women and the extent to which it is limiting their careers. Sexual Harassment of Women explores the influence of sexual harassment in academia on the career advancement of women in the scientific, technical, and medical workforce. This report reviews the research on the extent to which women in the fields of science, engineering, and medicine are victimized by sexual harassment and examines the existing information on the extent to which sexual harassment in academia negatively impacts the recruitment, retention, and advancement of women pursuing scientific, engineering, technical, and medical careers. It also identifies and analyzes the policies, strategies and practices that have been the most successful in preventing and addressing sexual harassment in these settings.

bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.

This study sets out to do two things. Firstly, it seeks to contribute to the burgeoning literature on ontological security in International Relations (IR)... Secondly, I hope to say something about Indian nationalism by making the case for Bangladesh's importance in the project of nation-curation. I show how the uncodability of the Bangladeshi migrant and the Indian citizen presents an ontological threat to the Indian nation, portending an implosion of selfhood by undermining claims to an ontic reality for something called the Indian nation...

Christian Metz and the Codes of Cinema BRILL

In this thought-provoking work, Tony D. Sampson presents a contagion theory fit for the age of networks. Unlike memes and microbial contagions, Virality does not restrict itself to biological analogies and medical metaphors. It instead points toward a theory of contagious assemblages, events, and affects. For Sampson, contagion is not necessarily a positive or negative force of encounter; it is how society comes together and relates. Sampson argues that a biological knowledge of contagion has been universally distributed by way of the rhetoric of fear used in the antivirus industry and other popular discourses surrounding network culture. This awareness is also detectable in concerns over too much connectivity, such as problems of global financial crisis and terrorism. Sampson's "virality" is as established as that of the biological meme and microbe but is not understood through representational thinking expressed in metaphors and analogies. Rather, Sampson interprets contagion theory through the social relationalities first established in Gabriel Tarde's microsociology and subsequently recognized in Gilles Deleuze's ontological worldview. According to Sampson, the reliance on representational thinking to explain the social behavior of networking—including that engaged in by nonhumans such as computers—allows language to overcategorize and limit analysis by imposing identities, oppositions, and resemblances on contagious phenomena. It is the power of these categories that impinges on social and cultural domains. Assemblage theory, on the other hand, is all about relationality and encounter, helping us to understand the viral as a positively sociological event, building from the molecular outward, long before it becomes biological.

Things: A Story of the Sixties is the story of a young couple who want to enjoy life, but the only way they know how to do so is through ownership of 'things'. Perec's first novel won the Prix Renaudot and became the cult book for a generation. In A Man Asleep, a young student embarks upon a disturbing and exhaustive pursuit of indifference, following his experience in non-existence with relentless logic.

Here are some of Sciascia's greatest stories - brief and haunting, the realist tradition at its best. In one tale a couple of men talk, cynically yet earnestly, about the etymology of the word 'mafia' - who they are, and why their interest is so piqued by the word, becomes apparent with frightening clarity. In another story a group of peasants are taken on board ship and promised that they will be put ashore illegally at Trenton, New Jersey; after a

long time at sea, their landfall is far from what they expected. And Mussolini himself takes an interest in the case of Aleister Crowley, whose presence in Sicily has become an embarrassment.

"The second edition of the Global Education Monitoring Report (GEM Report) presents the latest evidence on global progress towards the education targets of the UN Sustainable Development Goals. With hundreds of millions of people still not going to school, and many not achieving minimum skills at school, it is clear education systems are off track to achieve global goals. The marginalized currently bear the most consequences but also stand to benefit the most if policy-makers pay sufficient attention to their needs. Faced with these challenges, along with tight budgets and increased emphasis on results-oriented value for money, countries are searching for solutions. Increased accountability often tops the list. The 2017/8 GEM Report shows the entire array of approaches to accountability in education. It ranges from countries unused to the concept, where violations of the right to education go unchallenged, to countries where accountability has become an end in itself instead of a means to inclusive, equitable and high-quality education and lifelong learning for all. The report emphasizes that education is a shared responsibility. While governments have primary responsibility, all actors - schools, teachers, parents, students, international organizations, private sector providers, civil society and the media 63 have a role in improving education systems. The report emphasized the importance of transparency and availability of information but urges caution in how data are used. It makes the case for avoiding accountability systems with a disproportionate focus on narrowly defined results and punitive sanctions. In an era of multiple accountability tools, the report provides clear evidence on those that are working and those that are not."--Back cover.

Accountability in education: meeting our commitments Routledge

Today's world is post-colonial and post-Cold War. These twin characteristics explain why international society is also riddled with the two major forms of injustice which Nancy Fraser identified as afflicting national societies. First, the economic and social disparities between states caused outcry in the 1950s when the first steps were taken towards decolonisation. These inequalities, to which a number of emerging states now contribute, are still glaring and still pose the problem of the gap between formal equality and true equality. Second, international society is increasingly confronted with culture- and identity-related claims, stretching the dividing line between equality and difference. The less-favoured states, those that feel stigmatised, but also native peoples, ethnic groups, minorities and women now aspire to both legal recognition of their equal dignity and the protection of their identities and cultures. Some even seek reparation for injustices arising from the past violation of their identities and the confiscation of their property or land. In answer to these two forms of claim, the subjects of international society have come up with two types of remedy encapsulated in legal rules: the law of development and the law of recognition. These two sets of rights are neither wholly autonomous and individualised branches of law nor formalised sets of rules. They are imperfect and have their dark side. Yet they can be seen as the first milestones towards what might become a fairer international society; one that is both equitable (as an answer to socio-economic injustice) and decent (as an answer to cultural injustice). This book explores this evolution in international society, setting it in historical perspective and examining its presuppositions and implications.

Culture: urban future John Wiley & Sons

This book provides in-depth and wide-ranging analyses of the emergence, and subsequent ubiquity, of algorithms in diverse realms of social life. The plurality of Algorithmic Cultures emphasizes: 1) algorithms' increasing importance in the formation of new epistemic and organizational paradigms; and 2) the multifaceted analyses of algorithms across an increasing number of research fields. The authors in this volume address the complex interrelations between social groups and algorithms in the construction of meaning and social interaction. The contributors highlight the performative dimensions of algorithms by exposing the dynamic processes through which algorithms - themselves the product of a specific approach to the world - frame reality, while at the same time organizing how people think about society. With contributions from leading experts from Media Studies, Social Studies of Science and Technology, Cultural and Media Sociology from Canada, France, Germany, UK and the USA, this volume presents cutting edge empirical and conceptual research that includes case studies on social media platforms, gaming, financial trading and mobile security infrastructures.

A pioneering figure in film studies, Christian Metz proposed countless new concepts for reflecting on cinema, rooted in his phenomenological structuralism. He also played a key role in establishing film studies as a scholarly discipline, making major contributions to its institutionalisation in universities worldwide. This book brings together a stellar roster of contributors to present a close analysis of Metz's writings, their theoretical and epistemological positions, and their ongoing influence today.
