 This text provides a comprehensive review for practicing pathologists to understand the molecular biology, diagnostics, and predictive markers and implications for therapy of uterine cancer. While molecular based therapeutic strategies for uterine cancer are not as well developed as for some other organ sites, these are the most common gynecologic malignancies and there have been many important recent developments that are discussed in this volume. Comprehensive chapters address essential information about endometrial carcinoma, uterine mesenchymal tumors, and cervical carcinoma and include the pathogenesis of carcinoma and discuss molecular based classification, biomarkers, therapy, prevention, and hereditary cancers of the uterus. Precision Molecular Pathology of Uterine Cancer is a unique and one of a kind resource for practicing pathologists, pathologists in training and gynecologists.

Digital Evidence and Computer Crime Penn State Press

The 2010 Nagoya Protocol on Access and Benefit-sharing in Perspective analyses the implications of this innovative environmental treaty for different areas of international law, and its implementation challenges in various regions and from the perspectives of various stakeholders.

Journal Martinus Nijhoff Publishers

This book constitutes the refereed proceedings of the Second International Conference on Research in Smart Cards, E-smart 2001, held in Cannes, France, in September 2001. The 20 revised full papers presented were carefully reviewed and selected from 38 submissions. Among the topics addressed are biometrics, cryptography and electronic signatures on smart card security, formal methods for smart card evaluation and certification, architectures for multi-applications and secure open platforms, and middleware for smart cards and novel applications of smart cards.

The Language Grid Springer

One of the greatest American authors, Mark Twain holds a special position not only as a distinctly American cultural icon but also as a preeminent portrayer of youth. His famous writings about

children and youthful themes are central to both his work and his popularity. The distinguished contributors to Mark Twain and Youth make Twain even more accessible to modern readers by fully exploring youth themes in both his life and his extensive writings. The volume's twenty-six original essays offer new perspectives on such important subjects as Twain's boyhood; his relationships with his siblings and his own children; his attitudes toward aging, gender roles, and slavery; the marketing, reception, teaching, and adaptation of his works; and youth themes in his individual novels--Adventures of Huckleberry Finn, The Adventures of Tom Sawyer, The Prince and the Pauper, Pudd'nhead Wilson, and Joan of Arc. The book also includes a revealing foreword by actor Hal Holbrook, who has performed longer as "Mark Twain" than Samuel Clemens himself did. The book includes contributions by: Lawrence Berkove, John Bird, Jocelyn A. Chadwick, Joseph Csicsila, Hugh H. Davis, Mark Dawidziak, Shelley Fisher Fishkin, James Golden, Alan Gribben, Benjamin Griffin, Ronald Jenn, Holger Kersten, Andrew Levy, Cindy Lovell, Karen Lystra, Debra Ann MacComb, Peter Messent, Linda A. Morris, K. Patrick Ober, John R. Pascal, Lucy E. Rollin, Barbara Schmidt, David E. E. Sloane, Henry Sweets, Wendelinus Wurth.

The four-volume set LNCS 11334-11337 constitutes the proceedings of the 18th International Conference on Algorithms and Architectures for Parallel Processing, ICA3PP 2018, held in Guangzhou, China, in November 2018. The 141 full and 50 short papers presented were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on Distributed and Parallel Computing; High Performance Computing; Big Data and Information Processing; Internet of Things and Cloud Computing; and Security and Privacy in Computing.

The 2010 Nagoya Protocol on Access and Benefit-sharing in Perspective CRC Press

This is the first book describing cable networks, services, and their management in greater detail by thirteen experts in various fields covering network architectures and services, operations, administration, maintenance, provisioning, troubleshooting (OAMPT) for residential services; network architectures, services, and OAMPT for business services; Software Defined Networks (SDN) and Virtualization concepts Comprehensive reference book useful for people working for a multiple systems operator Includes chapter introductions Written by 13 experts in various fields such as network services and soft defined networks

The Merchant Taylors of York Jeffrey Frank Jones

There is increasing interaction among communities with multiple languages, thus we need services that can effectively support multilingual communication. The Language Grid is an initiative to build an infrastructure that allows end users to create composite language services for intercultural collaboration. The aim is to support communities to create customized multilingual environments by using language services to overcome local language barriers. The stakeholders of the Language Grid are the language resource providers, the language service users, and the language grid operators who coordinate the former. This book includes 18 chapters in six parts that summarize various research results and associated development activities on the Language Grid. The chapters in Part I describe the framework of the Language Grid, i.e., service-oriented collective intelligence, used to bridge providers, users and operators. Two kinds of software are introduced, the service grid server software and the

Language Grid Toolbox, and code for both is available via open source licenses. Part II describes technologies for service workflows that compose atomic language services. Part III reports on research work and activities relating to sharing and using language services. Part IV describes various applications of language services as applicable to intercultural collaboration. Part V contains reports on applying the Language Grid for translation activities, including localization of industrial documents and Wikipedia articles. Finally, Part VI illustrates how the Language Grid can be connected to other service grids, such as DFKI's Heart of Gold and smart classroom services in Tsinghua University in Beijing. The book will be valuable for researchers in artificial intelligence, natural language processing, services computing and human--computer interaction, particularly those who are interested in bridging technologies and user communities.

Daily Treasury Statement APH Publishing

o Includes the authoritative texts for eleven pieces written between 1868 and 1902 o Publishes, for the first time, the complete text of "Villagers of 1840-3," Mark Twain's astounding feat of memory o Features a biographical directory and notes that reflect extensive new research on Mark Twain's early life in Missouri Throughout his career, Mark Twain frequently turned for inspiration to memories of his youth in the Mississippi River town of Hannibal, Missouri. What has come to be known as the Matter of Hannibal inspired two of his most famous books, Tom Sawyer and Huckleberry Finn, and provided the basis for the eleven pieces reprinted here. Most of these selections (eight of them fiction and three of them autobiographical) were never completed, and all were left unpublished. Written between 1868 and 1902, they include a diverse assortment of adventures, satires, and reminiscences in which the characters of his own childhood and of his best-loved fiction, particularly Huck Finn and Tom Sawyer, come alive again. The autobiographical recollections culminate in an astounding feat of memory titled "Villagers of 1840-3" in which the author, writing for himself alone at the age of sixty-one, recalls with humor and pathos the characters of some one hundred and fifty people from his childhood. Accompanied by notes that reflect extensive new research on Mark Twain's early life in Missouri, the selections in this volume offer a revealing view of Mark Twain's varied and repeated attempts to give literary expression to the Matter of Hannibal.

Computer Security - ESORICS 2023 Univ of California Press

"Don't scold me, Livy—let me pay my due homage to your worth; let me honor you above all women; let me love you with a love that knows no doubt, no question—for you are my world, my life, my pride, my all of earth that is worth the having." These are the words of Samuel Clemens in love. Playful and reverential, jubilant and despondent, they are filled with tributes to his fiancée Olivia Langdon and with promises faithfully kept during a thirty-four-year marriage. The 188 superbly edited letters gathered here show Samuel Clemens having few idle moments in 1869. When he was not relentlessly "banged about from town to town" on the lecture circuit or busily revising *The Innocents Abroad*, the book that would make his reputation, he was writing impassioned letters to Olivia. These letters, the longest he ever wrote, make up the bulk of his correspondence for the year and are filled with his acute wit and dazzling language. This latest volume of Mark Twain's Letters captures Clemens on the verge of becoming the celebrity and family man he craved to be. This volume has been supported by the National Endowment for the Humanities and by a major donation to the Friends of The Bancroft Library from the Pareto Fund.

Learn to leverage, manage and protect your messaging infrastructure, and deliver information, products, and services to anyone, anytime, anywhere. Get the expertise you need in Electronic Messaging. Electronic Messaging shows you how to build from the ground up and then get the most out of a messaging infrastructure that will carry your enterprise into the next wave of collaborative computing, as well as into the next century. Packed with clear explanations, no-nonsense solutions and real-world case studies, Electronic Messaging goes far beyond basic terms, concepts, techniques, architectures, and products. While explaining fundamentals, it also provides all the advanced know-how you need to build, maintain and protect a first-class messaging environment. In the final analysis, Electronic Messaging gives you all the information and tools you need to position your enterprise for success in tomorrow's networked world - and to do so efficiently and economically.

Mark Twain and Youth Elsevier

Currently, intensive effort is being directed toward the identification of molecular targets that can provide approaches to the development of novel therapeutic strategies in cancer management. This book focuses on metastasis-associated genes, metastasis promoter and suppressor genes, which relate specifically to behavioral alterations of cancer cells in epithelial mesenchymal transition, cancer stem cell maintenance and propagation, and to the acquisition of invasive and metastasis faculty. The function of these genes has implications for cell cycle regulation and cell proliferation and so constitute an essential element in cancer growth and dissemination. The emphasis in this book is on how appropriate these genes are as molecular targets and how practicable are the constituents of their signal transduction systems as potential candidates and how accessible they are to targeted therapy. Written in a straightforward and clear style with background information supporting the new research, this book will be useful for students and researchers in cancer therapies. - Identifies molecular targets and their accessibility for therapeutic intervention - Provides information on biological features of tumor development and dissemination - Background information provided for each topic

Smart Card Programming and Security Addison Wesley Publishing Company

Molecular Approach to Cancer Management discusses molecular mechanisms of cancer initiation, growth and secondary spread, emphasizing how this information can be used to devise new

modes of treatment of cancer, especially in combatting secondary spread. The book addresses the basic concepts relating to cancer biology, the genetic determinants, and the signal transduction cascades associated with tumor growth, EMT, stem cell maintenance and propagation, and invasion and metastasis. The salient features of the signaling systems that are amenable to targeted manipulation are emphasized to facilitate research and development in the design of novel therapies and for the planning of new trials. This book is the only unique volume with coverage of topics that target therapy. As such, it is a valuable source for cancer researchers, molecular oncologists and members of the biomedical field who are interested in knowing more about molecular approaches to cancer therapy. - Covers all relevant topics with a defined aim of targeted therapy - Encompasses the basic aspects of cancer invasion and metastasis - Discusses signaling systems operating in normal cells and their deregulation in cancer cells - Directs attention to the foci in signaling systems that can be targeted with a new and conventional drug-based approach

This volume completes the publication of Middle Babylonian texts from the Rosen Collection that date to the Kassite period, a project that was initiated by Wilfred H. van Soldt with CUSAS 30 in 2015. In this book, Elena Devecchi provides full transliterations, translations, and extended commentaries of 338 previously unpublished cuneiform tablets from Kassite Babylonia (ca. 1475-1155 BCE). Most of the texts are dated to the reigns of Nazi-Maruttaš and Kadašman-Turgu, but the collection also includes one tablet dating to the reign of Burna-Buriaš II and a few documents from the reigns of Kadašman-Enlil II, Kudur-Enlil, and Šagarakti-Šuriaš, as well as some that are not dated. The tablets published here are largely administrative records dealing with the income, storage, and redistribution of agricultural products and byproducts, animal husbandry, and textile production, while legal documents and letters comprise a smaller portion of the collection. Evidence suggests that these documents originated from an administrative center that interacted closely with the provincial capital Nippur and must have been located in its vicinity. They thus expand significantly our previous knowledge of the Nippur region under Kassite rule, hitherto almost exclusively based on sources that came from Nippur itself, and provide substantial new data for the study of central aspects of society, economy, and administration that traditionally lie at the core of research about Kassite Babylonia.

Criminal Investigation Command (CID) Illustrative Crime Scene Forensics Presentations Nova Publishers

Renal cancer is a health problem of major concern worldwide. Although tyrosine kinase inhibitors and immune check-point blockade treatments, alone or in combination, are giving promising results, failures are quite frequent due to intratumor heterogeneity and to the acquisition of drug resistance. The spectrum of renal cell carcinoma subtypes is wide. Up to 70-80% of renal tumors are clear cell renal cell carcinomas, a clinically aggressive tumor subtype linked to VHL gene inactivation. Next in frequency, the papillary renal cell carcinoma category encompasses an intricate puzzle of classic and newly described entities with poorly defined limits, some of them pending definite clarification. Likewise, the chromophobe-oncocytoma duality, the so-called hybrid tumors and oncocytic neoplasms, remain to be

well profiled. Finally, a growing list of very uncommon renal tumors linked to specific molecular signatures fulfill the current portrait of renal cell neoplasia. This Special Issue of Cancers regards RCC from very different perspectives, from the intimate basic mechanisms governing this disease to the clinical practice principles of their diagnoses and treatments. The interested reader will have the opportunity to contact with some of the most recent findings and will be updated with excellent reviews.

Medical Imaging Packt Publishing Ltd

The papers comprising Vol. I and Vol. II were prepared for and presented at the International Conference on Information Networking 2002 (ICOIN 2002), which was held from January 30 to February 1, 2002 at Cheju Island, Korea. It was organized by the KISS (Korean Information Science Society) SIGIN in Korea, IPSJ SIG DPE (Distributed Processing Systems) in Japan, the ITRI (Industrial Technology Research Institute), and National Taiwan University in Taiwan. The papers were selected through two

steps, refereeing and presentation review. We selected for the theme of the conference the motto "One World of Information Networking". We did this because we believe that networking will transform the world into one zone, in spite of different ages, countries and societies. Networking is in the main stream of everyday life and affects directly millions of people around the world. We are in an era of tremendous excitement for professionals working in many aspects of the converging networking, information retailing, entertainment, and publishing companies. Ubiquitous communication and computing technologies are changing the world. Online communities, e commerce, e service, and distance learning are a few of the consequences of these technologies, and advanced networking will develop new applications and technologies with global impact. The goal is the creation of a world wide distributed computing system that connects people and appliances through wireless and high bandwidth wired channels with a backbone of computers that serve as databases and object servers. Thus, Vol.
