Soil Survey Manual (New Revised Ed.) CRC Press

For as long as there have been people, men and women have looked up into the night sky and wondered about the nature of the cosmos. Without the benefit of science to provide answers, they relied on myth and superstition to help them make sense of what they saw. Lucky for us, we live at a time when regular folks, equipped with nothing more than their naked eyes, can look up into the night sky and gain admittance to infinite wonders. If you know what to look for, you can make out planets, stars, galaxies, and even galactic clusters comprising hundreds of millions of stars and spanning millions of light-years. *Astronomy For Dummies* tells you what you need to know to make sense of the world above us. Written by one of the most well-known astronomers in the world, this fun, fact-filled, and accessible guide fills you in on the basic principles of astronomy and tells you how to: Identify planets and stars Explore our solar system, the Milky Way, and beyond Understand the Big Bang, quasars, antimatter, black holes, and more Join the Search for Extraterrestrial Intelligence (SETI) Get the most out of planetarium visits Make more sense out of space missions From asteroids to black holes, quasars to white dwarfs, *Astronomy For Dummies* takes you on a grand tour of the universe. Featuring star maps, charts, gorgeous full-color photographs, and easy-to-follow explanations it gives you a leg up on the basic science of the universe. Topics covered include: Observing the night sky, with and without optics Selecting binoculars and telescopes and positioning yourself for the best view Meteors, comets, and man-made moons Touring our solar system and becoming familiar with the planets, asteroids, and near Earth objects Our Sun, stars, galaxies, black holes and quasars SETI and planets revolving around other suns Dark matter and antimatter The Big Bang and the evolutions of the universe You might think the cosmos is a vast and mysterious place, but *Astronomy For Dummies* will make it seem as friendly and familiar as your own backyard.

Modeling Uncertainty: An Examination of Stochastic Theory, Methods, and Applications, is a volume undertaken by the friends and colleagues of Sid Yakowitz in his honor. Fifty internationally known scholars have collectively contributed 30 papers on modeling uncertainty to this volume. Each of these papers was carefully reviewed and in the majority of cases the original submission was revised before being accepted for publication in the book. The papers cover a great variety of topics in probability, statistics, economics, stochastic optimization, control theory, regression analysis, simulation, stochastic programming, Markov decision process, application in the HIV context, and others. There are papers with a theoretical emphasis and others that focus on applications. A number of papers survey the work in a particular area and in a few papers the authors present their personal view of a topic. It is a book with a considerable number of expository articles, which are accessible to a nonexpert - a graduate student in mathematics, statistics, engineering, and economics departments, or just anyone with some mathematical background who is interested in a preliminary exposition of a particular topic. Many of the papers present the state of the art of a specific area or represent original contributions which advance the present state of knowledge. In sum, it is a book of considerable interest to a broad range of academic researchers and students of

stochastic systems.

This book discusses gritty issues that society faces every day: food and water security, environmental services provided by farmers, almost accidentally, and taken for granted by everyone else, the capability of the land to provide our needs today and for the foreseeable future and pollution of soil, air and water. The chapters are grouped in four main themes: soil development - properties and qualities; assessment of resources and risks; soil fertility, degradation and improvement and soil contamination, monitoring and remediation. It is a selection of papers presented at the Pedodiversity in Space and Time Symposium held at Chernivtsi National University, Ukraine, 15-19 September 2015.

Recently widowed, Rebecca Parcell is too busy struggling to maintain her farm in Morristown to give a fig who wins the War for Independence. But rumors are spreading in the winter of 1780 that she's a Loyalist sympathizer who betrayed her husband to the British- quite a tidy way to end her disastrous marriage, the village gossips whisper. Everyone knows that her husband was a Patriot, a hero who died aboard a British prison ship moored in New York Harbor. But "everyone" is wrong. Parcell was a British spy, and General Washington-who spent that winter in Morristown-can prove it. He swears he'll safeguard Becca's farm if she unravels her husband's secrets. With a mob ready to exile her or worse, it's an offer she can't refuse. Escaped British prisoner of war Daniel Alloway was the last person to see Becca's husband alive, and Washington throws this unlikely couple together on an espionage mission to British-occupied New York City. Moving from glittering balls to an underworld of brothels and prisons, Becca and Daniel uncover a plot that threatens the new country's future. But will they move quickly enough to warn General Washington? And can Becca, who's lost almost everyone she loves, fight her growing attraction to Daniel, a man who always moves on?

Based on ten years of collaborative, community-based research, this book examines race and racism in a mixed-heritage Native American and African American community on Long Island's north shore. Through excavations of the Silas Tobias and Jacob and Hannah Hart houses in the village of Setauket, Christopher Matthews explores how the families who lived here struggled to survive and preserve their culture despite consistent efforts to marginalize and displace them over the course of more than 200 years. He discusses these forgotten people and the artifacts of their daily lives within the larger context of race, labor, and industrialization from the early nineteenth to the mid-twentieth century. *A Struggle for Heritage* draws on extensive archaeological, archival, and oral historical research and sets a remarkable standard for projects that engage a descendant community left out of the dominant narrative. Matthews demonstrates how archaeology can be an activist voice for a vulnerable population's civil rights as he brings attention to the continuous, gradual, and effective economic assault on people of color living in a traditional neighborhood amid gentrification. Providing examples of multiple approaches to documenting hidden histories and silenced pasts, this study is a model for public and professional efforts to include and support the preservation of historic communities of color. A volume in the series Cultural Heritage Studies, edited by Paul A.

Uses previously unstudied Coast Guard records for New York City and environs to examine the development of Rum Row and smuggling in New York City during Prohibition. With the passage of the Eighteenth Amendment, "drying up" New York City promised to be the greatest triumph of the proponents of Prohibition. Instead, the city remained the nation's greatest liquor market.

Smugglers, Bootleggers, and Scofflaws focuses on liquor smuggling to tell the story of Prohibition in New York City. Using previously unstudied Coast Guard records from 1920 to 1933 for New York City and environs, Ellen NickKenzie Lawson examines the development of Rum Row and smuggling via the coasts of Long Island, the Long Island Sound, the Jersey shore, and along the Hudson and East Rivers. Lawson demonstrates how smuggling syndicates on the Lower East Side, the West Side, and Little Italy contributed to the emergence of the Broadway Mob. She also explores New York City's scofflaw population—patrons of thirty thousand speakeasies and five hundred nightclubs—as well as how politicians Fiorello La Guardia, James "Jimmy" Walker, Nicholas Murray Butler, Pauline Morton Sabin, and Al Smith articulated their views on Prohibition to the nation. Lawson argues that in their assertion of the freedom to drink alcohol for enjoyment, New York's smugglers, bootleggers, and scofflaws belong in the American tradition of defending liberty. The result was the historically unprecedented step of repeal of a constitutional amendment with passage of the Twenty-first Amendment in 1933.

What is the nature of unidentified aerial phenomena? Forty years ago a small cadre of dedicated researchers began actively investigating cases, interviewing witnesses, and exchanging data through a small, informal network of international contacts. Today this low profile network, or "invisible college," has grown into a larger, multi-nation volunteer research effort joined by many individuals. But the questions first raised 40 years ago remain current and unanswered. "I believe that a powerful force has influenced the human race in the past and is again influencing it now. Does this force represent alien intervention, or does it originate entirely within human consciousness? This is the question that forms the basis of the work of the Invisible College of UFO researchers." - Jacques Vallee Dr. Jacques Vallee began his professional life as an astronomer at the Paris Observatory in 1961. While on the staff of the French Space Committee, he witnessed the destruction of the tracking tapes of unknown objects orbiting the earth, initiating a lifelong interest in the UFO phenomenon. Vallee arrived in the U.S. in 1962 and worked in astronomy at the University of Texas at Austin before receiving a Ph.D. in computer science from Northwestern University in 1967. There he became a close associate of J. Allen Hynek, then scientific consultant for the U.S. Air Force on Project Blue Book—the result was *The Invisible College*. Other works by Vallee include *Dimensions*, *Confrontations*, and *Revelations*. Dr. Vallee is presently a venture capitalist living in San Francisco."

A new look at the 1937 abduction of a wealthy wife and mother, based on previously classified FBI documents—includes photos. When she was kidnapped from Long Meadow Farm in Stony Brook, New York, in 1937, Alice McDonnell Parsons was the heir to a vast fortune among Long Island's

wealthy elite. The crime shocked the nation and was front-page news for several months. J. Edgar Hoover personally assigned his best FBI agents to the case, and within a short time, Parsons's husband and their live-in housekeeper, Anna Kupryanova, had become prime suspects. Botched ransom attempts, clashes between authorities, and romantic intrigue kept the investigation mired in drama. The crime remained unsolved. Now, in this book, former Suffolk County detective Steven C. Drielak reveals previously classified FBI documents—and pieces together the mystery of the Alice Parsons kidnapping.

The study of slavery in the Americas generally assumes a basic racial hierarchy: Africans or those of African descent are usually the slaves, and white people usually the slaveholders. In this unique interdisciplinary work of historical archaeology, anthropologist Katherine Hayes draws on years of fieldwork on Shelter Island's Sylvester Manor to demonstrate how racial identity was constructed and lived before plantation slavery was racialized by the legal codification of races. Using the historic Sylvester Manor Plantation site turned archaeological dig as a case study, Hayes draws on artifacts and extensive archival material to present a rare picture of northern slavery on one of the North's first plantations. There, white settlers, enslaved Africans, and Native Americans worked side by side. While each group played distinct roles on the Manor and in the larger plantation economy of which Shelter Island was part, their close collaboration and cohabitation was essential for the Sylvester family's economic and political power in the Atlantic Northeast. Through the lens of social memory and forgetting, this study addresses the significance of Sylvester Manor's plantation history to American attitudes about diversity, Indian land politics, slavery and Jim Crow, in tension with idealized visions of white colonial community. -- Book jacket.

In a world where half of the population lives in cities and more than 90 percent of urban growth is occurring in the developing world, cities struggle to modernize without completely losing their unique character, which is embodied by their historic cores and cultural heritage assets. As countries develop, cultural heritage can provide a crucial element of continuity and stability: the past can become a foundation for the future. This book collects innovative research papers authored by leading scholars and practitioners in heritage economics, and presents the most current

knowledge on how heritage assets can serve as drivers of local economic development. What this book tries to suggest is a workable approach to explicitly take into account the cultural dimensions of urban regeneration in agglomerations that have a history and possess a unique character, going beyond an approach based solely on major cultural heritage assets or landmarks. The knowledge disseminated through this book will help stakeholders involved in preparation, implementation, and supervision of development investments to better assess the values of cultural heritage assets and incorporate them in urban development policies.

“This provocative and exciting book . . . makes a startling case for there being life on Mars.”

—Whitley Strieber, #1 New York Times–bestselling author of *Communion* The Martians is an in-depth study of the theory that Mars was once a world that teemed with life. Perhaps, even, life not too dissimilar to ours. Incredibly, the Martians may still be there. Alive. The questions that this book asks and answers include the following: • What kind of society did the Martians have? • What caused their world to become harsh and desert-like? • Did global warming or nuclear war ensure the extinction of the Martians? • Are Martian artifacts strewn about the surface, just waiting to be found by the likes of NASA? • Has NASA already found such evidence, but chosen to withhold such monumental finds from the public and the media? • Could some form of the Martians still exist, deeply below the surface of the planet, in secure installations that allow them to ensure their civilization continues? • What do we know about the Martian environment, its atmosphere, and its landscape? The Martians explores the CIA’s top-secret search for the Martians, multiple photos of strange anomalies, and the latest revelations about the environment and water on Mars. And most tantalizing of all: Did an ailing Martian race come to Earth in past eons and were they confused with gods? The questions concerning life on Mars—then and now—are many. The answers are astounding.

“Might be just the book to bring out your inner astronomer . . . over 250 pages of breathtaking images from the past 50 years of NASA’s space exploration.” —Parade Preface by Bill Nye This magnificent volume offers a rich visual tour of the planets in our solar system. More than two-hundred breathtaking photographs from the archives of NASA are paired with extended captions detailing the science behind some of our cosmic neighborhood’s most extraordinary phenomena. Images of newly discovered areas of Jupiter, fiery volcanoes on Venus, and many more reveal the astronomical marvels of space in engrossing detail. Anyone with an interest in science, astronomy, and the mysteries of the universe will delight in this awe-inspiring guide to the wonders of the solar system. “As you turn through the pages, you’re hit with true moments of awe, photos that remind you the power of nature extends beyond our own planet.” —Houston Chronicle “Breathtaking pictures show the otherworldly magic of the solar system . . . The images are at once humbling and uplifting: Here in the black void of space is Saturn’s frozen moon, Mimas, white and pitted like a galactic golf ball; here is the tiny golden orb called Io, casting a shadow in a perfect inky circle on the marbled surface of Jupiter; here is the great sun, flames spurting from its surface like plumes.” —The Wall Street Journal “[A] gorgeous photographic tour of space . . . The collection is a remarkable reminder of how much has been learned about the planets over the past few decades,

solving many mysteries yet introducing many more.” —Publishers Weekly

Urban Soils Routledge

One of the key goals of incident management is the rapid clearance of traffic incidents. Many transportation agencies focus their incident management on quicker and more reliable detection techniques. Another focus, however, should be the reduction in time required by law enforcement officers to complete on-scene investigations of crashes. As the price of high-quality digital cameras has steadily declined, more agencies are beginning to use photogrammetry as a method for accident investigation and reconstruction. The investigative time needed for certain crash sites is reduced because taking photographs is quicker and simpler than employing other methods typically used, such as coordinate and the total station survey method. Pictures are taken at the site and then brought back to the office and analyzed to obtain measurements of the scene. The analysis can be very time-consuming; therefore, the trade-off for reduced field time and road closure time is increased analysis time. Many law enforcement agencies in Virginia, including the Virginia State Police, use the total station survey method for accident investigation and reconstruction. Its main disadvantages are its relatively high cost and complexity, with the latter necessitating extensive training on how to use the system. Because of these factors, it is often the case that only a few systems and operators are available. Given the commitment of the Virginia State Police and other law enforcement agencies to total stations, the purpose of this study was to determine if photogrammetry is a valid tool for accident investigation and reconstruction in Virginia. The scope was limited to reviews of the literature and the state of the practice. Findings and conclusions are provided regarding the use of photogrammetry in Virginia and the United States, its advantages and disadvantages, associated legal issues, and its cost. The report recommends that the Virginia Department of Transportation in conjunction with the Virginia State Police undertake several case studies of accident investigation and reconstruction at either mock or real crash scenes in which both total station and the most current photogrammetry methods are used and compared.

Circular Economy in the Construction Industry is an invaluable resource for researchers, policymakers, implementers and PhD and Masters-level students in universities analyzing the present status of Construction and Demolition Wastes (C&DW) management, materials development utilizing slag, fly ash, HDPE fibre, geo-wastes, and other wastes, green concrete, soil stabilization, resource circulation in construction sectors, success in experimentation & commercial production, future needs, and future research areas. While huge C&DW is wasted by dumping, there is potential of recycling preventing greenhouse gas (GHG) emissions and environmental pollution as well as creating business opportunities. Circularity of resources in the construction industry can contribute to a more secure, sustainable, and economically sound future through proper policy instruments, management systems, and recycling by selecting the following: Supply chain sustainability and collection of C&D Wastes, Appropriate separation and recycling technology, Enforcement of policy instruments, Productivity, quality control of recycled products and intended end use, Economic feasibility as business case, commercialization, generating employment. This book addresses most of the above issues in a lucid manner by experts in the field from different countries, which are helpful for the related stakeholders, edited by experts in the field.

This book focuses on the management and conservation of architectural heritage with the aim of increasing awareness about the value of such conservation and of saving what is left of history, which in turn rewards societies by supporting the tourism industry, generating economic return, and preserving communities' identities. Since it has become an essential need to manage and conserve the architectural heritage in order to protect the identity and heritage of a city, there appeared a gap between the theory and its application. Therefore, a considerable amount of attention has been directed by experts in this field toward emphasizing the contribution of heritage conservation in order to inspire the development of imaginative, useful high-quality design.
