Making Good Time W. W. Norton & Company

The eighth edition of *The Evolution of Management Thought* provides readers with a deep understanding of the origin and development of management ideas. Spanning an expansive time period, from the pre-industrial era to the modern age of globalization, this landmark volume examines the backgrounds, original work, and influences of major figures and their contributions to advances in management theory and practice. This fully-revised edition has been painstakingly reviewed and thoroughly updated to reflect areas of contemporary management such as job design, motivation, leadership, organization theory, technological change, and increased worker diversity. In this classic text, authors Daniel Wren and Arthur Bedeian examine the management challenges and perspectives of the Industrial Revolution, discuss the emergence of the management process and systematic management, trace the rise of scientific management, and much more. Organized around a chronological framework, the text places a comprehensive range of management theories in their historical context to clearly illustrate their evolution over time. The book's four parts, each designed to be a self-contained unit of study, contain extensive cross-references to allow readers to connect earlier to later developments to the volume's central unifying theme.

History of Management Thought Springer Nature

This book describes the millennia-long process of the genesis, formation, struggle, and change of views on the management of social organizations in various countries around the world; in other words, it characterizes the worldwide evolution of the History of Management Thought (HMT) - ideas, concepts, theories, paradigms, and scientific schools - from Antiquity to the present. The book is the outcome of extensive research, based on the analysis, generalization, and systematization of foreign and domestic published literature, as well as on the gathering and analysis of unique archival materials. For the first time in the

historical and managerial literature, the book puts forward original definitions of three historical and managerial sciences - the History of Management, the History of Management Thought, and the Historiography of Historical and Managerial Research. It addresses the main challenges in pursuing Historical and Scientific Research (HSR), the main "subject" levels of HSR and specific methodological problems concerning HMT, as well as epistemological methods for identifying key factors in and causes of the advent and evolution of HMT. This book presents both the origins of management thought dating back to the 5th millennium BC and the latest management concepts of the early 21st century. In particular, it traces the origins and sources of management thought, reflected in the works of thinkers and statesmen of the Ancient World (Egypt, Western Asia, China, India, Greece, and Rome), the era of feudalism, and the Middle Ages (Byzantium, Western Europe, and England), the era of inception capitalism (Western Europe and the USA), as well as the new and recent history of management thought of the 20th and 21st centuries. In addition, for the first time in History of Management literature, it presents the history of Russian management thought from the 9th century to modern concepts and scientific schools.

Making Time Oxford University Press

Lillian Gilbreth is a stunning example of female ingenuity in the early twentieth century. At a time when women were standard fixtures in the home and barely accepted in many professions, Gilbreth excelled in both spheres, concurrently winning honors as 'Engineer of the Year' and 'Mother of the Year'. This accessible, engaging introduction to the life of Lillian Gilbreth examines her pivotal role in establishing the discipline of industrial psychology, her work as an engineer of domestic management and home economics, and her role as mother of twelve children - made famous by the book, and later movie, *Cheaper by the Dozen*. This book examines the life of an exceptional woman who was able to negotiate the divide between the public and domestic spheres and define it on her terms. About the Lives of American Women series: selected and edited by renowned women's historian Carol Berkin, these brief biographies are designed for use in

undergraduate courses. Rather than a comprehensive approach, each biography focuses instead on a particular aspect of a woman's life that is emblematic of her time, or which made her a pivotal figure in the era. The emphasis is on a 'good read' featuring accessible writing and compelling narratives, without sacrificing sound scholarship and academic integrity. Primary sources at the end of each biography reveal the subject's perspective in her own words. Study questions and an annotated bibliography support the student reader.

Psychology and Work Today Taylor & Francis

Born into a life of privilege in 1878, Lillian Moller Gilbreth put her pampered life aside for one of adventure and challenge. She and her husband, Frank, became efficiency experts by studying the actions of factory workers. They ran their home efficiently, too. When Frank suddenly died, Lillian was left to her own devices to raise their eleven children. Eventually, she was hired by the Brooklyn Borough Gas Company to improve kitchen design, which was only the beginning. Lillian Gilbreth was the subject of two movies (*Cheaper by the Dozen* and *Belles on Their Toes*), the first woman elected to the National Academy of Engineering, and the first female psychologist to have a U.S. postage stamp issued in her honor. A leading efficiency expert, she was also an industrial engineer, a psychologist, an author, a professor and an inventor.

Guide to the Management Gurus 5th Edition UPNE

Spanning the 20th and 21st centuries, the writers considered in this first book of the Routledge Focus on Women Writers in Organization Studies series make an important contribution to how we think about rationality in managing, leading and working. It provides a space in which to think differently about rationality, challenging dominant masculine logics while positioning relations between people centre stage. A critical and intellectually provocative text, the book provides a nuanced and practical account of rationality in organizational contexts, making it clear that women have and continue to write groundbreaking work on the subject: women like Lillian Moller Gilbreth, who was at the forefront of developments in scientific management, and Frances Perkins, who was the first female US cabinet secretary. Both are important not only for what they achieved but also as illustrations

of the ways in which women have been written out of the accounts of managing and management thought. This matters not only because credit is denied to those who deserve it, but also because it impoverishes our understanding of complex organisational phenomenon. Where so much extant writing on managing and organizing is preoccupied with abstract notions of structure, strategy, metaphor and machines, the writers considered here explain why effective working and managing is primarily about seeing and working with people. Writers such as Arlie Hochschild, Mary Parker Follett and Heather Höpfl remind us that rationality cannot be decoupled from emotion or, where a system is to be rationalised, then it should start with and enhance the lives of people – be designed with people at the centre. In this sense, the book is not arguing for a wholesale rejection of rationality. Rather, authors call on readers to move beyond a preoccupation with rationality for its own sake, seeing it instead as a useful and highly contestable aspect of organizational life. Each woman writer is introduced and analysed by an expert in their field. Further reading and accessible resources are also identified for those interested in knowing more. This book will be relevant to students, researchers and practitioners with an interest in business and management, organizational studies, critical management studies, gender studies and sociology. Like all the books in this series, it will also be of interest to anyone who wants to see, think and act differently.

Lillian Gilbreth Indiana Historical Society

As editor Kenneth E. Hendrickson, III, notes in his introduction: “Since the end of the nineteenth-century, industrialization has become a global phenomenon. After the relative completion of the advanced industrial economies of the West after 1945, patterns of rapid economic change invaded societies beyond western Europe, North America, the Commonwealth, and Japan.” In *The Encyclopedia of the Industrial Revolution in World History* contributors survey the Industrial Revolution as a world historical phenomenon rather than through the traditional lens of a development largely restricted to Western society. *The Encyclopedia of the Industrial Revolution in World History* is a three-volume work of over 1,000 entries on the rise and spread of the Industrial Revolution across the world. Entries comprise accessible but scholarly explorations of topics from the “aerospace industry” to “zaibatsu.” Contributor articles not only

address topics of technology and technical innovation but emphasize the individual human and social experience of industrialization. Entries include generous selections of biographical figures and human communities, with articles on entrepreneurs, working men and women, families, and organizations. They also cover legal developments, disasters, and the environmental impact of the Industrial Revolution. Each entry also includes cross-references and a brief list of suggested readings to alert readers to more detailed information. *The Encyclopedia of the Industrial Revolution in World History* includes over 300 illustrations, as well as artfully selected, extended quotations from key primary sources, from Thomas Malthus’ “Essay on the Principal of Population” to Arthur Young’s look at Birmingham, England in 1791. This work is the perfect reference work for anyone conducting research in the areas of technology, business, economics, and history on a world historical scale.

The Mansion of Happiness Routledge

This book presents a diversity of innovative and impactful research in the field of industrial and systems engineering (ISE) led by women investigators. After a Foreword by Margaret L. Brandeau, an eminent woman scholar in the field, the book is divided into the following sections: Analytics, Education, Health, Logistics, and Production. Also included is a comprehensive biography on the historic luminary of industrial engineering, Lillian Moeller Gilbreth. Each chapter presents an opportunity to learn about the impact of the field of industrial and systems engineering and women’s important contributions to it. Topics range from big data analysis, to improving cancer treatment, to sustainability in product design, to teamwork in engineering education. A total of 24 topics touch on many of the challenges facing the world today and these solutions by women researchers are valuable for their technical innovation and excellence and their non-traditional perspective. Found within each author’s biography are their motivations for entering the field and how they view their contributions, providing inspiration and guidance to those entering industrial engineering.

Indiana's 200 Routledge

From building blocks to city blocks, an eye-opening exploration of how children's playthings and physical surroundings affect their development. Parents obsess over their children's playdates, kindergarten curriculum, and every bump and bruise, but the toys, classrooms, playgrounds, and neighborhoods little ones engage with are just as important. These objects and spaces encode decades, even centuries of changing ideas about what makes for good child-rearing--and what does not. Do you choose wooden toys, or plastic, or, increasingly, digital? What do youngsters lose when seesaws are deemed too dangerous and slides are designed primarily for safety? How can the built environment help children cultivate self-reliance? In these debates, parents, educators, and kids themselves are often caught in the middle. Now, prominent design critic Alexandra Lange reveals the surprising histories behind the human-made elements of our children's pint-size landscape. Her fascinating investigation shows how the seemingly innocuous universe of stuff affects kids' behavior, values, and health, often in subtle ways. And she reveals how years of decisions by toymakers, architects, and urban planners have helped--and hindered--

American youngsters' journeys toward independence. Seen through Lange's eyes, everything from the sandbox to the street becomes vibrant with buried meaning. *The Design of Childhood* will change the way you view your children's world--and your own. *Defining Management* Tundra Books

Why are the fields of science and technology still considered to be predominantly male professions? *The Madame Curie Complex* moves beyond the most common explanations - limited access to professional training, lack of resources, exclusion from social networks of men - to give historical context and unexpected revelations about women's contributions to the sciences.

Exploring the lives of Jane Goodall, Rosalind Franklin, Rosalyn Yalow, Barbara McClintock, Rachel Carson, and the women of the Manhattan Project, Julie Des Jardins considers their personal and professional stories in relation to their male counterparts - Albert Einstein, Robert Oppenheimer, Enrico Fermi - to demonstrate how the gendered culture of science molds the methods, structure, and experience of the work. With lively anecdotes and vivid detail, *The Madame Curie Complex* reveals how women scientists have often asked different questions, used different methods, come up with different explanations for phenomena in the natural world, and how they have forever transformed a scientist's role.

The Evolution of Management Thought Vintage

Reminiscences of Lillian Gilbreth, co-author of *Cheaper by the Dozen* and recipient of honors and awards which are listed at the end of the book along with academic degrees, memberships, and books and articles she authored.

Time Out for Happiness Random House

Renowned Harvard scholar and New Yorker staff writer Jill Lepore has written a strikingly original, ingeniously conceived, and beautifully crafted history of American ideas about life and death from before the cradle to beyond the grave. How does life begin? What does it mean? What happens when we die? "All anyone can do is ask," Lepore writes. "That's why any history of ideas about life and death has to be, like this book, a history of curiosity." Lepore starts that history with the story of a seventeenth-century Englishman who had the idea that all life begins with an egg, and ends it with an American who, in the 1970s, began freezing the dead. In between, life got longer, the stages of life multiplied, and matters of life and death moved from the library to the laboratory, from the humanities to the sciences. Lately, debates

about life and death have determined the course of American politics. Each of these debates has a history. Investigating the surprising origins of the stuff of everyday life—from board games to breast pumps—Lepore argues that the age of discovery, Darwin, and the Space Age turned ideas about life on earth topsy-turvy. "New worlds were found," she writes, and "old paradises were lost." As much a meditation on the present as an excavation of the past, *The Mansion of Happiness* is delightful, learned, and altogether beguiling.

Making Time Bloomsbury Publishing USA

Part of the Indiana Historical Society's commemoration of the nineteenth state's bicentennial, *Indiana's 200: The People Who Shaped the Hoosier State* recognizes the people who made enduring contributions to Indiana in its 200-year history. Written by historians, scholars, biographers, and independent researchers, the biographical essays in this book will enhance the public's knowledge and appreciation of those who made a difference in the lives of Hoosiers, the country, and even the world. Subjects profiled in the book include individuals from all fields of endeavor: law, politics, art, music, entertainment, literature, sports, education, business/industry, religion, science/invention/technology, as well as "the notorious."

Cheaper by the Dozen Springer Nature

Readers of *Cheaper by the Dozen* remember Lillian Moller Gilbreth (1878-1972) as the working mom who endures the antics of not only twelve children but also an engineer husband eager to experiment with the principles of efficiency -- especially on his own household. What readers today might not know is that Lillian Gilbreth was herself a high-profile engineer, and the only woman to win the coveted Hoover Medal for engineers. She traveled the world, served as an advisor on women's issues to five U.S. presidents, and mingled with the likes of Eleanor Roosevelt and Amelia Earhart. Her husband, Frank Gilbreth, died after twenty years of marriage, leaving her to raise their eleven surviving children, all under the age of nineteen. She continued her career and put each child through college. Retiring at the age of ninety, Lillian Gilbreth was the working mother who "did it all." Jane Lancaster's spirited and richly detailed biography tells Lillian Gilbreth's life story—one that resonates with issues faced today by many working women. Lancaster confronts the complexities of how one of the twentieth century's foremost career women could

be pregnant, nursing, or caring for children for more than three decades. Yet we see how Gilbreth's engineering work dovetailed with her family life in the professional and domestic partnership that she forged with her husband and in her long solo career. The innovators behind many labor-saving devices and procedures used in factories, offices, and kitchens, the Gilbreths tackled the problem of efficiency through motion study. To this Lillian added a psychological dimension, with empathy toward the worker. The couple's expertise also yielded the "Gilbreth family system," a model that allowed the mother to be professionally active if she chose, while the parents worked together to raise responsible citizens. Lancaster has woven into her narrative many insights gleaned from interviews with the surviving Gilbreth children and from historical research into such topics as technology, family, work, and feminism. Filled with anecdotes, this definitive biography of Lillian Gilbreth will engage readers intrigued by one of America's most famous families and by one of the nation's most successful women.

Growing Up America Rowman & Littlefield

This book describes industrial-organizational (I-O) psychology programs in action, showing how they are developed and implemented in a variety of organizational settings, using workers who differ by gender, age, culture, ethnicity, and socioeconomic status.

Women of Vision Hachette UK

A dazzling intellectual history of the West served up with verve and insight by two brilliant young historians. Here is an intellectual entertainment, a sweeping history of the key institutions that have organized knowledge in the West from the classical period onward. With elegance and wit, this exhilarating history alights at the pivotal points of cultural transformation. The motivating question throughout: How does history help us understand the vast changes we are now experiencing in the landscape of knowledge? Beginning in Alexandria and its great center of Hellenistic learning and imperial power, we then see the monastery in the wilderness of a collapsed civilization, the rambunctious universities of the late medieval cities, and the thick social networks of the Enlightenment republic of letters. The development of science and the laboratory as a dominant knowledge institution brings us to the present, seeking patterns in the new digital networks of knowledge. Full of memorable

characters, this fresh history succeeds in restoring the strangeness and the significance of the past.

[Cheaper by the Dozen](#) Tundra Books

A comprehensive examination of American women scientists across the sciences throughout the 20th century, providing a rich historical context for understanding their achievements and the way they changed the practice of science. Much more than a "Who's Who," this exhaustive two-volume encyclopedia examines the significant achievements of 20th century American women across the sciences in light of the historical and cultural factors that affected their education, employment, and research opportunities. With coverage that includes a number of scientists working today, the encyclopedia shows just how much the sciences have evolved as a professional option for women, from the dawn of the 20th century to the present. *American Women of Science since 1900* focuses on 500 of the 20th century's most notable American women scientists—many overlooked, undervalued, or simply not well known. In addition, it offers individual features on 50 different scientific disciplines (Women in Astronomy, etc.), as well as essays on balancing career and family, girls and science education, and other sociocultural topics. Readers will encounter some extraordinary scientific minds at work, getting a sense of the obstacles they faced as the scientific community faced the questions of feminism and gender confronting the nation as a whole.

[The Oxford Encyclopedia of Women in World History](#) Second Story Press

The fifth edition of the original, best-selling guide to the ideas of leading management thinkers. The ten additional full-length entries range from classic gurus such as Henry Gantt and the Gilbreth time-and-motion pioneers to the latest thinkers

influencing 21st-century business, including Clayton Christensen, master of innovation theory, and Karen Stephenson with her ground-breaking insights into human networks. The lives and work of more than 55 gurus are covered in clear and accessible style, along with penetrating analysis of their ideas and influence on management. *Guide to the Management Gurus* has sold around the world since its first publication in 1991, and has been translated into more than 15 languages, including Russian, Chinese, Korean and Japanese.

[Spic-and-Span!](#) Infobase Publishing

Concurrent with the increasing complexity of the field of management, the need to re-examine the foundations from which its theories have advanced has become ever more important and useful. *The Oxford Handbook of Management Theorists* examines and evaluates the contributions that seminal figures, past and present, have made to the theory of management by providing in-depth, up-to-date, and detailed scholarly analysis of their ideas and influence. Chapters by leading management and management history scholars explore the origins of each thinker or school of thought and their ideas, and discuss the significance and influence in a broader framework. The Handbook contextualises each theorist and their theories, analysing their actions, interactions, and re-actions to contemporary events and to each other. It is arranged in three parts: pioneers of management thinking from Frederick Taylor to Chester Barnard; post-war theorists, such as the Tavistock Institute and Edith Penrose; and the later phase of Business School theorists, including Alfred Chandler, Michael Porter, and Ikujiro Nonaka. This book will be essential reading for anyone interested in how and why management ideas have emerged, and the ways in which

they are currently developing and will evolve in the future.

Encyclopedia of Women and American Politics, Third Edition OUP Oxford

The Encyclopedia of Women in World History captures the experiences of women throughout world history in a comprehensive, 4-volume work. Although there has been extensive research on women in history by region, no text or reference work has comprehensively covered the role women have played throughout world history. The past thirty years have seen an explosion of research and effort to present the experiences and contributions of women not only in the Western world but across the globe. Historians have investigated women's daily lives in virtually every region and have researched the leadership roles women have filled across time and region. They have found and demonstrated that there is virtually no historical, social, or demographic change in which women have not been involved and by which their lives have not been affected. *The Oxford Encyclopedia of Women in World History* benefits greatly from these efforts and experiences, and illuminates how women worldwide have influenced and been influenced by these historical, social, and demographic changes. The Encyclopedia contains over 1,250 signed articles arranged in an A-Z format for ease of use. The entries cover six main areas: biographies; geography and history; comparative culture and society, including adoption, abortion, performing arts; organizations and movements, such as the Egyptian Uprising, and the Paris Commune; women's and gender studies; and topics in world history that include slave trade, globalization, and disease. With its rich and insightful entries by leading scholars and experts, this reference work is sure to be a valued, go-to resource for scholars, college and high school students, and general readers alike.
