Muse with the Moon Bloomsbury Publishing
 The interpretation of sacred scriptures engenders vivid debates in religious communities, both at the scholarly and grass-roots levels. Issues of debate are the hermeneutical assumptions, the methods of interpretation, and the constructive and harmful implications of certain readings. For Christian and Muslim communities, themes related to God's grace, violence, gender relations and ecology, are topical. As scholars from different contexts and faith backgrounds together interpret sacred texts they gain fresh insights into their meaning and their transformative dynamics. Essays by authors with expertise in scriptural interpretation, religious studies, pastoral care, philosophical theology, gender studies and pedagogy explore Christian and Muslim perspectives on scriptural interpretation, and discuss how to understand how God communicates with the world today.

 Mit dem Mond zum „grünen Daumen“. Die Autoren erklären, wie jeder mit dem Wissen um die Einflüsse der Mondrhythmen mühelos jedes Stückchen Land in einen ertragreichen und blütenschweren Garten verwandeln kann. Das Gartenbuch der besonderen Art – mit dem ganzen Wissen vom richtigen Zeitpunkt. Für Blütenpracht und reiche Ernte. • Mit Jahresplan, Anbauvorschlägen und Pflanzenkombinationen.

A Cultural History of Work in Antiquity WND Books

The founder of psychoanalysis and one of the twentieth century's most influential thinkers, in his own words. Sigmund Freud is on the very short list of historical figures who have profoundly influenced—perhaps even revolutionized—the way we think and the way we see the world and ourselves. This book compiles quotes, maxims, observations, and witticisms from the founder of psychoanalysis and the popularizer of such terms as ego, superego, and id. Covering subjects ranging from politics and religion to love and sex, this collection assembles passages from Freud's major works, as well as making use of personal letters to his friends and family. Organized into ten thematic chapters, this thought-provoking compilation provides a representative look into all of Freud's work.

A New World of Animals BRILL

"Captures the excitement of the scientific revolution and makes a point of celebrating the advances it ushered in." —Financial Times A companion to such acclaimed works as *The Age of Wonder*, *A Clockwork Universe*, and *Darwin's Ghosts*—a groundbreaking examination of the greatest event in history, the Scientific Revolution, and how it came to change the way we understand ourselves and our world. We live in a world transformed by scientific discovery. Yet today, science and its practitioners have come under political attack. In this fascinating history spanning continents and centuries, historian David Wootton offers a lively defense of science, revealing why the Scientific Revolution was truly the greatest event in our history. *The Invention of Science* goes back five hundred years in time to chronicle this crucial transformation, exploring the factors that led to its birth and the people who made it happen. Wootton argues that the Scientific Revolution was actually five separate yet concurrent events that developed independently, but came to intersect and create a new worldview. Here are the brilliant iconoclasts—Galileo, Copernicus, Brahe, Newton, and many more curious minds from across Europe—whose studies of the natural world challenged centuries of religious orthodoxy and ingrained superstition. From gunpowder technology, the discovery of the new world, movable type printing, perspective painting, and the telescope to the practice of conducting experiments, the laws of nature, and the concept of the fact, Wootton shows how these discoveries codified into a social construct and a system of knowledge. Ultimately, he makes clear the link between scientific discovery and the rise of industrialization—and the birth of the modern world we know.

Die Spur des Sputnik Walter de Gruyter GmbH & Co KG

The late-twentieth-century anxiety about a 'crisis in masculinity' still persists today, particularly in English-speaking cultures. *Studying Men and Masculinities* offers an engaging and comprehensive overview of masculinity. Drawing on a wide range of cultural practices and texts from different genres and media, David Buchbinder examines the notion of patriarchy and the challenges to patriarchal power, including queer theory. The book considers whether crisis may in fact be built into the very structure of the masculine, and examines emergent masculinities post-9/11. Theoretical positions within the field are clearly explained and applied to real life case studies from literature, film, and television. Interspersed in each chapter are a series of questions and tasks aimed at encouraging the reader to engage her/himself in the study of masculinities in everyday life and popular culture. This topical and thought-provoking book will be an invaluable resource for students of masculinities studies, sexuality studies, cultural studies, and gender theory.

The Invention of Science Springer Nature

Julius Schmidt was one of the finest astronomical observers of his time, and his detailed map of the Moon surpassed anything that had come before. Today, the German astronomer and geophysicist has remained a largely neglected figure, despite being one of the most important players in the history of lunar studies. This book at last makes accessible Schmidt's highly regarded German work, *Der Mond*. Considered an astronomical classic of the nineteenth century, *Der Mond* remained without a proper English counterpart for the last century and a half, until now. The author's faithful English translation provides readers with much-needed access into Schmidt's original publication, with the aim of showing the community just how vital his work and legacy have been in the international field of selenography.

What is the history of knowledge? This engaging and accessible introduction explains what is distinctive about the new field of the history of knowledge (or, as some scholars say, 'knowledges in the plural') and how it differs from the history of science, intellectual history, the sociology of knowledge or from cultural history. Leading cultural historian, Peter Burke, draws upon examples of this new kind of history from different periods and from the history of India, East Asia and the Islamic world as well as from Europe and the Americas. He discusses some of the main concepts used by scholars working in the field, among them 'order of knowledge', 'situated knowledge' and 'knowledge society'. This book tells the story of the transformation of relatively raw 'information' into knowledge via processes of classification, verification and so on, the dissemination of this knowledge and finally its employment for different purposes, by governments, corporations or private individuals. A concluding chapter identifies central problems in the history of knowledge, from triumphalism to relativism, together with attempts to solve them. The only book of its kind yet to be published, *What is the History of Knowledge?* will be essential reading for all students of history and the humanities in general, as well as the interested general reader.

Interpreting Suárez Simon and Schuster

A survey of ancient Egyptian mathematics across three thousand years *Mathematics in Ancient Egypt* traces the development of Egyptian mathematics, from the end of the fourth millennium BC—and the earliest hints of writing and number notation—to the end of the pharaonic period in Greco-Roman times. Drawing from mathematical texts, architectural drawings, administrative documents, and other sources, Annette Imhausen surveys three thousand years of Egyptian history to present an integrated picture of theoretical mathematics in relation to the daily practices of Egyptian life and social structures. Imhausen shows that from the earliest beginnings, pharaonic civilization used numerical techniques to efficiently control and use their material resources and labor. Even during the Old Kingdom, a variety of metrological systems had already been devised. By the Middle Kingdom, procedures had been established to teach mathematical techniques to scribes in order to make them proficient administrators for their king. Imhausen looks at counterparts to the notation of zero, suggests an explanation for the evolution of unit fractions, and analyzes concepts of arithmetic techniques. She draws connections and comparisons to Mesopotamian mathematics, examines which individuals in Egyptian society held mathematical knowledge, and considers which scribes were trained in mathematical ideas and why. Of interest to historians of mathematics, mathematicians, Egyptologists, and all those curious about Egyptian culture, *Mathematics in Ancient Egypt* sheds new light on a civilization's unique mathematical evolution.

Divination and Human Nature casts a new perspective on the rich tradition of ancient divination—the reading of divine signs in oracles, omens, and dreams. Popular attitudes during classical antiquity saw these readings as signs from the gods while modern scholars have treated such beliefs as primitive superstitions. In this book, Peter Struck reveals instead that such phenomena provoked an entirely different accounting from the ancient philosophers. These philosophers produced subtle studies into what was an odd but observable fact—that humans could sometimes have uncanny insights—and their work signifies an early chapter in the cognitive history of intuition. Examining the writings of Plato, Aristotle, the Stoics, and the Neoplatonists, Struck demonstrates that they all observed how, setting aside the charlatans and swindlers, some people had premonitions defying the typical bounds of rationality. Given the wide differences among these ancient thinkers, Struck notes that they converged on seeing this surplus insight as an artifact of human nature, projections produced under specific conditions by our physiology. For the philosophers, such unexplained insights invited a speculative search for an alternative and more naturalistic system of cognition. Recovering a lost piece of an ancient tradition, *Divination and Human Nature* illustrates how philosophers of the classical era interpreted the phenomena of divination as a practice closer to intuition and instinct than magic.

The Art of Divination in the Ancient Near East Princeton University Press

With the stress and strains of modern life, it is increasingly difficult to be the peaceful and serene spirit that we all wish to be. In *I Want to Be Calm*, Harriet Griffey explores the issues we may face in our day-to-day lives that make us feel stressed, anxious, depressed or overwhelmed, and shares practical advice on how to overcome them. Covering topics such as the worry cycle, managing emotions and mindful meditation, Harriet shows how to implement easy but effective approaches to find calm. She looks at how we can practice mindfulness at home and work, how to pursue better relationships and making mindful decisions like choosing peace and living in the moment, plus more. Beautifully illustrated throughout, *I Want to Be Calm* will still the mind and relax the body, bringing you peace and happiness.

From national security and social security to homeland and cyber-security, "security" has become one of the most overused words in culture and politics today. Yet it also remains one of the most undefined. What exactly are we talking about when we talk about security? In this original and timely book, John Hamilton examines the discursive versatility and semantic vagueness of security both in current and historical usage. Adopting a philological approach, he explores the fundamental ambiguity of this word, which denotes the removal of "concern" or "care" and therefore implies a condition that is either carefree or careless. Spanning texts from ancient Greek poetry to Roman Stoicism, from Augustine and Luther to Machiavelli and Hobbes, from Kant and Nietzsche to Heidegger and Carl Schmitt, Hamilton analyzes formulations of security that involve both safety and negligence, confidence and complacency, certitude and ignorance. Does security instill more fear than it assuages? Is a security purchased with freedom or human rights morally viable? How do security projects inform our expectations, desires, and anxieties? And how does the will to security relate to human finitude?

Although the book makes clear that security has always been a major preoccupation of humanity, it also suggests that contemporary panics about security and the related desire to achieve perfect safety carry their own very significant risks. *Scribal Practices and the Social Construction of Knowledge in Antiquity, Late Antiquity and Medieval Islam* Goldmann Verlag
Der Start des sowjetischen Satelliten Sputnik am 4. Oktober 1957 löste im Westen einen Schock aus, während er für die Sowjetunion eine neue »kosmische Ära« einleitete. Doch der Sputnik-Flug hatte nicht nur technische und politische Bedeutung. Erstmals gehen die Autorinnen und Autoren in diesem Band auch den grundlegenden kulturellen Wandlungen nach, die aus dem Beginn der Raumfahrtära resultierten. Das Themenspektrum reicht von der Veränderung des kollektiven Zeitempfindens und der Raumästhetik über Wandlungen in der visuellen Kultur der Sowjetunion bis zu ideengeschichtlichen und literarischen Adaptionen der Weltraumfaszination.

The wisdom of Michael J. Roads in 30 short, practical chapters meant to keep you on the path to enlightenment. "If you live what you learn from this book, you will transcend through the various landmines that litter the landscape of the unsuspecting spiritual adventurer. With this book as your guide, you can walk freely, easily, and joyfully."

Freud Verbatim Walter de Gruyter

Francisco Suárez is arguably the most important Neo-Scholastic philosopher and a vital link in the chain leading from medieval philosophy to that of the Renaissance and the Enlightenment. Long neglected by the Anglo-Saxon philosophical community, this sixteenth-century Jesuit theologian is now an object of intense scholarly attention. In this volume, Daniel Schwartz brings together essays by leading specialists which provide detailed treatment of some key themes of Francisco Suárez's philosophical work: God, metaphysics, meta-ethics, the human soul, action, ethics and law, justice and war. The authors assess the force of Suárez's arguments, set them within their wider argumentative context and single out influences and appraise competing interpretations. The book is a useful resource for scholars and students of philosophy, theology, philosophy of religion and history of political thought and provides a rich bibliography of secondary literature.

Transformative Readings of Sacred Scriptures kassel university press GmbH

Since the dawn of humanity, people have developed concepts about themselves and the natural world in which they live. This volume aims at investigating the construction and transfer of such concepts between and within various ancient and medieval cultures. The single contributions try to answer questions concerning the sources of knowledge, the strategies of transfer and legitimation as well as the conceptual changes over time and space. After a comprehensive introduction, the volume is divided into three parts: The contributions of the first section treat various theoretical and methodological aspects. Two additional thematic sections deal with a special field of knowledge, i.e. concepts of the moon and of the end of the world in fire.

I Want to be Calm Taylor & Francis

In this updated fourth edition, author Maurice Levi successfully integrates both the micro and macro aspects of international finance. He successfully explores managerial issues and focuses on problems arising from financial trading relations between nations, whilst covering key topics such as: * organization of foreign exchange markets * determination of exchange rates * the fundamental principles of international finance * foreign exchange risk and exposure * fixed and flexible exchange rates. This impressive new edition builds and improves upon the

popular style and structure of the original. With new data, improved pedagogy, and coverage of all of the main developments in international finance over the last few years, this book will prove essential reading for students of economics and business.

The Moon Waxmann Verlag

Medicine, astronomy, dealing with numbers - even the cultures of the "pre-modern" world offer a rich spectrum of scientific texts.

But how are they best translated? Is it sufficient to translate the sources into modern scientific language, and thereby, above all, to identify their deficits? Or would it be better to adopt the perspective of the sources themselves, strange as they are, only for them not to be properly understood by modern readers? Renowned representatives of various disciplines and traditions present a controversial and constructive discussion of these problems.
