The field of superconductivity has tremendous potential for growth and further development in industrial applications.

The subject continues to occupy physicists, chemists, and engineers

interested in both the phenomena itself and possible financially viable industrial devices utilizing the physical concepts. For the past five years, within the publications of the American Physical Society, for example, 40%-60% of all articles submitted to major journals in the area of Solid State Physics have been on the subject of superconductivity, including the newer,

extremely important subfield of high temperature superconductivity (high T_c). The present volume is the first handbook to address this field. It covers both "classic" superconductivity-related topics and high T_c . Numerous properties, including thermal, electrical, magnetic, mechanical, phase diagrams, and spectroscopic crystallographic structures are presented for many

extremely important subfield of high temperature superconductivity (high T_c). The present volume is the first handbook to address this field. It covers both "classic" superconductivity-related topics and high T_c . Numerous properties, including thermal, electrical, magnetic, mechanical, phase diagrams, and spectroscopic crystallographic structures are presented for many

extremely important subfield of high temperature superconductivity (high T_c). The present volume is the first handbook to address this field. It covers both "classic" superconductivity-related topics and high T_c . Numerous properties, including thermal, electrical, magnetic, mechanical, phase diagrams, and spectroscopic crystallographic structures are presented for many

<p>types of superconductors. Critical fields, critical currents, coherence lengths, penetration depths, and transition temperatures are tabulated. - First handbook on Superconductivity - Coherence lengths and depths are tabulated - Crystallographic structures of over 100 superconductor types - Main results of several theories are submitted - Phase diagrams for synthesizing</p>	<p>new superconductors are included <u>Clio Medica. Acta Academiae Internationalis Historiae Medicinae.</u> Vol. 11 BRILL The subject of this supplement to Landolt-Börnstein IV/22 Series is to present both the numerical and graphical data on the various magnetic properties of materials under pressure. Data for transition metal binary oxides MmOn [M: transition metals, O:</p>	<p>oxygen, m, n: 1~15], MXO [M: transition metals, X: F, Cl, Br, O: oxygen] and MM'On [M: transition metals, M': transition metals or non-transition metal elements, O: oxygen, n=2, 2.5, 3] ternary oxides are presented. As well known, the data-compiling principle in the Landolt-Börnstein series is to choose the best reliable values from many available experimental data. The</p>
---	---	---

present compilation is done according to this principle. *Clio Medica : Acta Academiae Internationalis Historiae Medicinae, Vol. 13* Brill Archive As periodical of the International Academy of the History of Medicine, this *Clio Medica* volume contains 15 papers. Modern Aspects of Rare Earths and their Complexes Elsevier Every third year, the members of the International Association for Neo-Latin Studies (IANLS) assemble for a week-long conference. Over the years, this event has evolved into the largest single conference in the field of Neo-Latin studies. The papers presented at these conferences offer, then, a general overview of the current status of Neo-Latin research; its current trends, popular topics, and methodologies . In 2022, the members of IANLS gathered for a conference in Leuven where 50 years ago the first of these congresses took place. This volume presents the conference's papers which were submitted after the event and which have undergone a peer-review process. The papers deal with a broad range of fields, including

literature, history, philology, and religious studies. *Acta Historiae Neerlandica II* BRILL In order to use rare earths successfully in various applications, a good understanding of the chemistry of these elements is of paramount importance. Nearly three to four decades have passed since titles such as *The Rare Earths* edited by F.H. Spedding and A.H. Daane, *The chemistry of the Rare Earth Elements* by N.E. Topp and *Complexes of the Rare Earths* by S.P. Sinha were published. There have been many international conferences and symposia on rare earths, as well as the series of volumes entitled *Handbook of Physics and Chemistry of Rare Earths* edited by K.A. Gschneidner and L. Eyring. Thus, there is a need for a new title covering modern aspects of rare earth complexes along with the applications. The present title consists of twelve chapters. 1. Introduction 2. General aspects 3. Stability of complexes 4. Lanthanide complexes 5. Structural chemistry of lanthanide compounds 6. Organometallic complexes 7. Kinetics and mechanisms of rare earths complexation 8. Spectroscopy of lanthanide complexes 9. Photoelectron spectroscopy of rare earths 10.

Lanthanide NMR shift reagents¹¹. Environmental ecological biological aspects¹². Applications The authors studied in schools headed by pioneers in rare earth chemistry, have a combined experience of one hundred and fifty years in inorganic chemistry, rare earth complex chemistry, nuclear and radiochemistry of rare earths and supramolecular chemistry. The present

monograph is a product of this rich experience. **Fœdera, conventiones, literæ, et cujuscunque generis acta publica, inter reges Angliæ et alios quosvis imperatores, reges, pontifices, principes, vel communitates, ab ineunte sæculo duodecimo, viz. ab anno 1101, ad nostra usque tempore habita aut tractata** BRILL Nonstoichiometric Oxides discusses the

thermodynamic and structural studies of nonstoichiometric oxides. This eight-chapter text also covers the defect-defect interactions in these compounds. The introductory chapters describe the thermodynamic properties of nonstoichiometric oxides in terms of defect complexes using the classical thermodynamic principles and from a statistical thermodynamic

cs point of view. These chapters also include statistical thermodynamic models that indicate the ordered nonstoichiometric phase range in these oxides. The subsequent chapters examine the transport properties, such as diffusion and electrical conductivity. Diffusion theories and experimental diffusion coefficients for several systems, as well as the electrical properties of

the highly defective ionic and mixed oxide conductor, are specifically tackled in these chapters. The concluding chapters present the pertinent results obtained in nonstoichiometric oxide structural studies using high-resolution electron microscopy and X-ray and neutron diffraction. Inorganic chemists and inorganic chemistry teachers and students will

greatly appreciate this book. *Foedera, Conventiones, Literae, Et Cujuscunque Generis Acta Publica, Inter Reges Angliae, Et Alios Quosvis Imperatores, Reges, Pontifices, Principes, Vel Communitates, Ab Ineunte Saeculo Duodecimo, Viz. Physics of Non-Tetrahedrally Bonded Binary Compounds III

/ Physik Der Nicht-tetraedrisch Gebundenen Binären Verbindungen

III BRILL

Since 1971, the International Congress for Neo-Latin Studies has been organised every three years in various cities in Europe and North America. In August 2012, Münster in Germany was the venue of the fifteenth Neo-Latin conference, held by the International Association for Neo-Latin

Studies. The proceedings of the Münster conference have been collected in this volume under the motto „Litterae neolatinae, sedes et quasi domicilia rerum religiosarum et politicarum – Religion and Politics in Neo-Latin Literature”. Forty-five individual and five plenary papers spanning the period from the Renaissance to the present offer a variety of themes covering a

range of genres such as history, literature, philology, art history, and religion. The contributions will be of relevance not only for scholarly readers, but also for an interested non-professional audience.

every three years in various cities in Europe and North America. In August 2009, Uppsala in Sweden was the venue of the fourteenth Neo-Latin conference, held by the International Association for Neo-Latin Studies. The proceedings of the Uppsala conference have been collected in this volume under the motto "Litteras et artes nobis traditas excolere - Reception and Innovation".

Ninety-nine individual and five plenary papers spanning the period from the Renaissance to the present offer a variety of themes covering a range of genres such as history, literature, philology, art history, and religion. The contributions will be of relevance not only for scholarly readers, but also for an interested non-professional audience.

Acta Congressus Madvigiani Hafniae MDMLIV
Leuven University Press
This continuing authoritative series deals with the chemistry, materials science, physics and technology of the rare earth elements in an integrated manner. Each chapter is a comprehensive, up-to-date, critical review of a particular segment of the field. The work offers the researcher and graduate student a complete and

thorough coverage of this fascinating field. REVIEW:" Highly experienced authors have written each review usually at a level suitable for advanced postgraduate students and	research workers from a variety of fields. With the great richness of information involving references to other review articles written from different points of view, the books are	an important reference source and should be on the shelves of most libraries." -- Journal of Applied Crystallography - Authoritative - Comprehensive - Up-to-date - Critical
