ROJAS KADE

Feminist, Queer, Crip U of Minnesota Press
 Feminist theorist and philosopher Donna Haraway has substantially impacted thought on science, cyberculture, the environment, animals, and social relations. This long-overdue volume explores her influence on feminist theory and philosophy, paying particular attention to her more recent work on companion species, rather than her "Manifesto for Cyborgs." Margret Grebowicz and Helen Merrick argue that the ongoing fascination with, and re-production of, the cyborg has overshadowed Haraway's extensive body of work in ways that run counter to her own transdisciplinary practices. Sparked by their own personal "adventures" with Haraway's work, the authors offer readings of her texts framed by a series of theoretical and political perspectives: feminist materialism, standpoint epistemology, radical democratic theory, queer theory, and even science fiction. They situate Haraway's critical storytelling and "risky reading" practices as forms of feminist

methodology and recognize her passionate engagement with "naturecultures" as the theoretical core driving her work. Chapters situate Haraway as critic, theorist, biologist, feminist, historian, and humorist, exploring the full range of her identities and reflecting her commitment to embodying all of these modes simultaneously.

The Cyborg Handbook John Wiley & Sons
 What is the nature of athletic performance? This book offers an answer to this fascinating question by considering the relationship between sport, technology and the body. Specifically, it examines cultural resistance to the enhancement of athletes and explores the ways in which performance technologies complicate and confound our conception of the sporting body. The book addresses concerns about the technological "invasion" of the "natural" body to investigate expectations that athletic performances reflect nothing more than the actual capacity of the untainted athlete. By examining a series of case studies, including Paralympic sprinter Oscar Pistorius, Fastskin swimsuits, hypoxic chambers and an array of illicit substances and methods, the book distinguishes between internal and external technologies to highlight the ways that performance

enhancement, and public reaction to it, can be read. *Sport, Technology and the Body* offers a powerful challenge to conventional views of athletic performance that stand authenticity against artifice, integrity against corruption, and athletic purity against technological intrusion. It is essential reading for all serious students of the sociology, culture or ethics of sport.

The Beautiful Warriors Routledge

In *Molecular Red*, McKenzie Wark creates philosophical tools for the Anthropocene, our new planetary epoch, in which human and natural forces are so entwined that the future of one determines that of the other. Wark explores the implications of Anthropocene through the story of two empires, the Soviet and then the American. The fall of the former prefigures that of the latter. From the ruins of these mighty histories, Wark salvages ideas to help us picture what kind of worlds collective labor might yet build. From the scientific pioneers who were trying to transform science during the Russia Revolution, to visionaries contemplating cyborg possibilities and science fiction dreams in late 20th century California, *Molecular Red* not only looks at the crisis of climate change that we face but also how we might be able to understand it, and how we might salvage some hope out of the wreckage.

Staying with the Trouble Rowman & Littlefield

A new approach to writing culture has arrived: multispecies ethnography. Plants, animals, fungi, and microbes appear alongside humans in this singular book about natural and cultural history. Anthropologists have collaborated with artists and biological scientists to illuminate how diverse organisms are entangled in political, economic, and cultural systems. Contributions from influential writers and scholars, such as Dorion Sagan, Karen Barad, Donna Haraway, and Anna Lowenhaupt Tsing, are featured along with essays by emergent artists and cultural anthropologists. Delectable mushrooms flourishing in the aftermath of ecological disaster, microbial cultures enlivening the politics and value of food, and nascent life forms running wild in the age of biotechnology all figure in this curated collection of essays and artifacts. Recipes provide instructions on how to cook acorn mush, make cheese out of human milk, and enliven forests after they have been clear-cut. *The Multispecies Salon* investigates messianic dreams, environmental nightmares, and modest sites of biocultural hope. For additional materials see the companion website: www.multispecies-salon.org/ Contributors: Karen Barad, Caitlin Berrigan, Karin Bolender, Maria Brodine, Brandon Costelloe-Kuehn, David S. Edmunds, Christine Hamilton, Donna J. Haraway, Stefan Helmreich, Angela James, Lindsay Kelley, Eben Kirksey, Linda Noel, Heather Paxson, Nathan Rich, Anna Rodriguez, Dorion Sagan, Craig Schuetze, Nicholas Shapiro, Miriam Simun, Kim TallBear, Anna Lowenhaupt Tsing

Crystals, Fabrics, and Fields Manchester University Press

French philosopher Gilles Deleuze is known as a thinker of creation, joyous affirmation, and rhizomatic assemblages. In this short book, Andrew Culp polemically argues that this once-radical canon of joy has lost its resistance to the present. Concepts created to defeat capitalism have been recycled into business mantras that joyously affirm "Power is vertical; potential is horizontal!" Culp recovers the Deleuze's forgotten negativity. He unsettles the prevailing interpretation through an underground network of references to conspiracy, cruelty, the terror of the outside, and the shame of being human. Ultimately, he rekindles opposition to what is intolerable about this world. *Forerunners* is a thought-in-process series of breakthrough digital works. Written between fresh ideas and finished books, *Forerunners* draws on scholarly work initiated in notable blogs, social media, conference plenaries, journal articles, and the synergy of academic

exchange. This is gray literature publishing: where intense thinking, change, and speculation take place in scholarship. *Simians, Cyborgs, and Women* U of Minnesota Press Building off the highly successful *The Cyborg Handbook*, this new collection of essays, interviews, and creative pieces brings together a set of compelling personal accounts about what it means to live as a cyborg in the twenty-first century. Human integration with complex technologies goes back to clothes, cooking, and language, but has accelerated incredibly in the last few centuries, with interest spreading among scientists, coders, people with sophisticated implants, theorists, and artists. This collection includes some of the most articulate of these voices from over 25 countries, including Donna Haraway, Stelarc, Natasha Vita-More, Steve Mann, Amber Case, Michael Chorost, Moon Ribas, Kevin Warwick, Sandy Stone, Dion Farquhar, Angeliki Malakasioti, Elif Ayiter, Heesang Lee, Angel Gordo, and others. Addressing topics including race, gender, sexuality, class, conflict, capitalism, climate change, disability and beyond, this collection also explores the differences between robots, androids, cyborgs, hybrids, post-, trans-, and techno-humans, offering readers a critical vocabulary for understanding and discussing the cyborgification of culture and everyday life. Compelling, interdisciplinary, and international, the book is a perfect primer for students, researchers, and teachers of cyberculture, media and cultural theory, and science fiction studies, as well as anyone interested in the intersections between human and machine.

No Speed Limit Columbia University Press

Acclaimed theorist and social scientist Donna Jeanne Haraway uses the work of pioneering developmental biologists Ross G. Harrison, Joseph Needham, and Paul Weiss as a springboard for a discussion about a shift in developmental biology from a vitalism-mechanism framework to organicism. The book deftly interweaves Thomas Kuhn's concept of paradigm change into this wide-ranging analysis, emphasizing the role of model, analogy, and metaphor in the paradigm and arguing that any truly useful theoretical system in biology must have a central metaphor.

Primate Visions Routledge

What does it mean to be human today? The answer to this question, which is as old as the human species itself, is becoming less and less certain. Current technological developments increasingly erode our traditional humanist reflexes: consciousness, emotion, language, intelligence, morality, humour, mortality - all these no longer demonstrate the unique character and value of human existence. Instead, the spectre of the 'posthuman' is now being widely invoked as the 'inevitable' next evolutionary stage that humans are facing. Who comes after the human? This is the question that posthumanists are taking as their starting point. This critical introduction understands posthumanism as a discourse, which, in principle, includes everything that has been and is being said about the figure of the 'posthuman'. It outlines the genealogy of the various posthuman 'scenarios' in circulation and engages with their theoretical and philosophical assumptions and social and political implications. It does so by connecting the philosophical debate about the future of humanity with a range of texts, including examples from new media, popular culture, science and the media.

Posthuman Urbanism Springer Science & Business Media

Helva had been born human, but only her brain had been saved—saved to be schooled, programmed, and implanted into the sleek titanium body of an intergalactic scout ship. But first she had to choose a human partner—male or female—to share her exhilarating escapades in space! Her life was to be rich and

rewarding . . . resplendent with daring adventures and endless excitement, beyond the wildest dreams of mere mortals. Gifted with the voice of an angel and being virtually indestructible, Helva XH-834 antipitated a sublime immortality. Then one day she fell in love!

Molecular Red Taylor & Francis

In *Bodies That Matter*, Judith Butler further develops her distinctive theory of gender by examining the workings of power at the most "material" dimensions of sex and sexuality. Deepening the inquiries she began in *Gender Trouble*, Butler offers an original reformulation of the materiality of bodies, examining how the power of heterosexual hegemony forms the "matter" of bodies, sex, and gender. Butler argues that power operates to constrain "sex" from the start, delimiting what counts as a viable sex. She offers a clarification of the notion of "performativity" introduced in *Gender Trouble* and explores the meaning of a citational politics. The text includes readings of Plato, Irigaray, Lacan, and Freud on the formation of materiality and bodily boundaries; "Paris is Burning," Nella Larsen's "Passing," and short stories by Willa Cather; along with a reconsideration of "performativity" and politics in feminist, queer, and radical democratic theory.

Bodies That Matter U of Minnesota Press

Following World War II, millions of U.S. Catholics were poised to attain the American dream, while at Vatican Council II, the liberal vision of the church seemed finally to triumph. Yet by the end of the twentieth century, American Catholicism was in crisis, plagued by grave ideological divisions; a dwindling pool of priests, nuns, and monks; and declining financial resources. What went wrong? In *Tracing the Sign of the Cross*, Marian Ronan identifies the roots of this crisis in an inability on the part of American Catholics to mourn a variety of losses suffered in the last third of the twentieth century. Drawing on the work of four writers with distinctively Catholic imaginations, Ronan argues that endless battles over sexuality and gender in particular have kept American Catholics from confronting these losses, thus jeopardizing the future of Catholicism. The writings of James Carroll, the archetypal liberal American Catholic, form the basis of Ronan's exploration of the church in the decades following Vatican II. Carroll's writings, especially his memoir, *An American Requiem*, seem to embody the very engagement with loss Ronan calls for—yet a highly gendered pattern of resistance to mourning emerges throughout Carroll's writing. Ronan discerns a similar Catholic "inability to mourn" in the early works of the novelist Mary Gordon, the feminist philosopher of science Donna Haraway, and the essayist Richard Rodriguez. While Gordon's characters gradually engage their profound losses, Haraway's female cyborg dons a crown of thorns, and Rodriguez confronts his own gay/brown identity—contributing in all cases to a new and chastened vision of the church. Framed by the author's own personal experience, *Tracing the Sign of the Cross* is an intimate and persuasive account of Catholic possibility in a postmodern world.

EGirls, ECitizens Duke University Press

Now that pornography is on the Internet, its political and social functions have changed. So contends Margret Grebowicz in this imperative philosophical analysis of Internet porn. The production and consumption of Internet porn, in her account, are a symptom of the obsession with self-exposure in today's social networking media, which is, in turn, a symptom of the modern democratic construction of the governable subject as both transparent and communicative. In this first feminist critique to privilege the effects of pornography's Internet distribution rather than what it depicts, Grebowicz examines porn-sharing communities (such as the bestiality niche market) and the politics of putting women's

sexual pleasure on display (the "squirting" market) as part of the larger democratic project. Arguing against this project, she shows that sexual pleasure is not a human right. Unlikely convergences between thinkers like Catherine MacKinnon, Jean Baudrillard, Judith Butler, and Jean-François Lyotard allow her to formulate a theory of the relationships between sex, speech, and power that stands as an alternative to such cyber-libertarian mottos as "freedom of speech" and "sexual freedom."

Posthumanism A&C Black

Haraway's discussions of how scientists have perceived the sexual nature of female primates opens a new chapter in feminist theory, raising unsettling questions about models of the family and of heterosexuality in primate research.

On cybernetic organisms (cyborgs)

Carnal Art Psychology Press

Simians, Cyborgs and Women is a powerful collection of ten essays written between 1978 and 1989. Although on the surface, simians, cyborgs and women may seem an odd threesome, Haraway describes their profound link as "creatures" which have had a great destabilizing place in Western evolutionary technology and biology. Throughout this book, Haraway analyzes accounts, narratives, and stories of the creation of nature, living organisms, and cyborgs. At once a social reality and a science fiction, the cyborg—a hybrid of organism and machine—represents transgressed boundaries and intense fusions of the nature/culture split. By providing an escape from rigid dualisms, the cyborg exists in a post-gender world, and as such holds immense possibilities for modern feminists. Haraway's recent book, *Primate Visions*, has been called "outstanding," "original," and "brilliant," by leading scholars in the field. (First published in 1991.)

Why Internet Porn Matters Routledge

Haraway's 'A Cyborg Manifesto' is a key postmodern text and is widely taught in many disciplines as one of the first texts to embrace technology from a leftist and feminist perspective using the metaphor of the cyborg to champion socialist, postmodern, and anti-identitarian politics. Until Haraway's work, few feminists had turned to theorizing science and technology and thus her work quite literally changed the terms of the debate. This article continues to be seen as hugely influential in the field of feminism, particularly postmodern, materialist, and scientific strands. It is also a precursor to cyberfeminism and posthumanism and perhaps anticipates the development of digital humanities.

Steeped in Heritage Indiana University Press

Accelerationism is the bastard offspring of a furtive liaison between Marxism and science fiction. Its basic premise is that the only way out is the way through: to get beyond capitalism, we need to push its technologies to the point where they explode. This may be dubious as a political strategy, but it works as a powerful artistic program. Other authors have debated the pros and cons of accelerationist politics; *No Speed Limit* makes the case for an accelerationist aesthetics. Our present moment is illuminated, both for good and for ill, in the cracked mirror of science-fictional futurity. *Forerunners: Ideas First* is a thought-in-process series of breakthrough digital publications. Written between fresh ideas and finished books, *Forerunners* draws on scholarly work initiated in notable blogs, social media, conference plenaries, journal articles, and the synergy of academic exchange. This is gray literature publishing: where intense thinking, change, and speculation take place in scholarship.

Xenofeminism U of Minnesota Press

This timely and engaging book argues that technoscientific advances are radically transforming the woman-machine relationship. However, it is feminist politics rather than the

technologies themselves that make the difference.

TechnoFeminism fuses the visionary insights of cyberfeminism with a materialist analysis of the sexual politics of technology.

Reload Lexington Books

eGirls, eCitizens is a landmark work that explores the many forces that shape girls' and young women's experiences of privacy, identity, and equality in our digitally networked society. Drawing on the multi-disciplinary expertise of a remarkable team of leading Canadian and international scholars, as well as Canada's foremost digital literacy organization, MediaSmarts, this collection presents the complex realities of digitized

communications for girls and young women as revealed through the findings of The eGirls Project (www.egirlsproject.ca) and other important research initiatives. Aimed at moving dialogues on scholarship and policy around girls and technology away from established binaries of good vs bad, or risk vs opportunity, these seminal contributions explore the interplay of factors that shape online environments characterized by a gendered gaze and too often punctuated by sexualized violence. Perhaps most importantly, this collection offers first-hand perspectives collected from girls and young women themselves, providing a unique window on what it is to be a girl in today's digitized society.
