The field of monster studies has grown significantly over the past few years and this companion provides a comprehensive guide to the study of monsters and the monstrous from historical, regional and thematic perspectives. The collection reflects the truly multi-disciplinary nature of monster studies, bringing in scholars from literature, art history, religious studies, history, classics and cultural and media studies. The companion offers scholars and graduate students the first comprehensive and authoritative review of this emergent field.

*Effects of Anthropogenic Noise on Animals* Ashgate Publishing, Ltd.

Kids love Leo Lionni's books because they entertain and deal with emotions, feelings and issues that are important to kids, all at the same time. Our author study is designed to explore the award winning books and artwork of Leo Lionni. The order in which Leo Lionni's books are shared is entirely up to the teacher, building more flexibility into the unit. There are complete lessons including reproducible pages, activities and questions for each of the following books: The Alphabet Tree, Little Blue and Yellow, A Color Of His Own. An Extraordinary Egg, Frederick, The Greentail Mouse, Mr M. Mouse, Matthew's Dream, A Busy Year, Tillie And The Wall, Alexander and The Wind-Up Mouse, Geraldine, The Music Mouse, and much more. This Author Study provides a teacher and student section with a variety of activities, author biography, self-evaluation, story sequencing, and reader's theatre to create a well-rounded lesson plan.

Why cracking the code of human conception took centuries of wild theories, misogynist blunders, and ludicrous mistakes Throughout most of human history, babies were surprises. People knew the basics: men and women had sex, and sometimes babies followed. But beyond that the origins of life were a colossal mystery. The Seeds of Life is the remarkable and rollicking story of how a series of blundering geniuses and brilliant amateurs struggled for two centuries to discover where, exactly, babies come from. Taking a page from investigative thrillers, acclaimed science writer Edward Dolnick looks to these early scientists as if they were detectives hot on the trail of a bedeviling and urgent mystery. These strange searchers included an Italian surgeon

using shark teeth to prove that female reproductive organs were not 'failed' male genitalia, and a Catholic priest who designed ingenious miniature pants to prove that frogs required semen to fertilize their eggs. A witty and rousing history of science, *The Seeds of Life* presents our greatest scientists struggling-against their perceptions, their religious beliefs, and their deep-seated prejudices-to uncover how and where we come from.

*Exploration of the Seas* The Princeton Review

Provides a complete program for integrating hypermedia production skills into the classroom, for teachers of lower grades through high school. Section I describes activities adaptable to various teaching styles and curriculum needs, covering everything from rain forests to fractions to pioneers. Activities include step-by-step instructions and reproducible handouts. Section II gives student directions for using many of the hypermedia programs and software support materials currently being used in schools, such as HyperStudio for Apple IIGS, HyperCard, and Multimedia Scrapbook. Appendices offer assessment tools, generic planning sheets, and teacher support materials. Annotation copyrighted by Book News, Inc., Portland, OR

Animal trainers care for many different types of animals! Children will explore some of the methods that trainers use, such as affection bonding and classical and operant conditioning, while simultaneously gaining an understanding of animal instincts and animal rehabilitation. Readers are invited to learn about the variety of animals that trainers work with and are encouraged to find an area of study to focus on if they want to become an animal trainer. With stunning images, interesting facts, a glossary of useful terms, informational text, and an interview with a real-life animal trainer, readers will be intrigued and delighted as they move through this fascinating title. This 6-Pack includes six copies of this title and a lesson plan.

"A 22-volume, highly illustrated, A-Z general encyclopedia for all

Over the past several years, many investigators interested in the effects of man-made sounds on animals have come to realize that there is much to gain from studying the broader literature on hearing sound and the effects of sound as well as data from the effects on humans. It has also become clear that knowledge of the effects of sound on one group of animals (e.g., birds or frogs) can guide studies on other groups (e.g., marine mammals or fishes) and that a review of all such studies together would be very useful to get a better understanding of the general principles and underlying cochlear and cognitive mechanisms that explain damage, disturbance, and deterrence across taxa. The purpose of this volume, then, is to provide a comprehensive review of the effects of man-made sounds on animals, with the goal of fulfilling two major needs. First, it was thought to be important to bring together data on sound and bioacoustics that have implications across all taxa (including humans) so that such information is generally available to the community of scholars interested in the effects of sound. This is done in Chaps. 2-5. Second, in Chaps. 6-10, the volume brings together what is known about the effects of sound on diverse vertebrate taxa so that investigators with interests in specific groups can learn from the data and experimental approaches from other species. Put another way, having an overview of the similarities and discrepancies among various animal groups and insight into the "how and why" will benefit the overall conceptual understanding, applications in society, and all future research.

*Reading with Leo Lionni (Author Study)* National Academies Press  
Today, almost all countries of the world are facing the scourge of natural disasters caused by global warming. Rising temperature is increasing the frequency and intensity of natural disasters and the severity of their effects. The increase in the average global temperature has not happened all of a sudden, the real reason for this increase is the pro-capitalist/corporate world economic development model adopted by the governments of different countries. Most of the countries around the world, especially developed countries, have indiscriminately squandered natural

resources in a blind race of economic growth. The research articles in this book are an attempt to analyze the global climate crisis, natural disasters, and economic growth. They trace the extent to which human beings have destroyed natural resources such as forests, water, land, and air in the name of economic development. The average temperature of the earth began to rise after the Pre-Industrial Revolution Period. Rapid global warming has caused the world's oldest and most developed countries to be affected by floods, heatwaves, droughts, and wildfires. Every day, one or another region of India is suffering from natural calamities, with the state of Uttarakhand and six states in the Western Ghats being on the brink of ruin. They also explain which countries around the world are now planning to overcome the climate crisis caused by global warming. The time to look at the facts and act on Climate Change is now, if every country takes bold steps for the pressing issues at hand, we can still change the trajectory of where humanity is headed. Everyday small acts by vigilant citizens can look like drops of water, but we should remember many tiny drops can make an ocean, these many small acts can surmount to something bigger. We must put in the time, though, and effort quickly and boldly. Here's to leaving our planet better than how we found it for the future generations to come.

Seventy percent of our blue planet is covered by oceans.

Although progress has been made in understanding the role of oceans in climate change, locating energy reserves, revealing new life forms, and describing the flow of carbon through these systems, it may be time to catapult our understanding to new levels by undertaking an interdisciplinary, international, global ocean exploration program. The interim report outlines the committee's vision for a future international global ocean exploration program; this vision will be fully described, together

with detailed recommendations for technological needs and capabilities, funding levels, and management structures to ensure a productive and successful ocean exploration program.
