In this original and lucid account of how Spanish painters of the 16th and 17th centuries dealt with mystic visions in their art, and of how they attempted to "represent the unrepresentable", Victor Stoichita aims to establish a theory of visionary imagery in Western art in general, and one for the Spanish Counter-Reformation in particular. He reveals how the spirituality of the Counter-Reformation was characterized by a rediscovery of the role of the

imagination in the exercise of faith. This had important consequences for painters such as Velazquez, Zurbaran and El Greco, leading to the development of ingenious solutions for visual depictions of mystical experience. This was to crystallize into an overtly meditative and didactic pictorial language. That Spanish painting is both cerebral and passionate is due to the particular historical forces which shaped it. Stoichita's account will be of crucial interest not just to scholars of Spanish art but to anyone interested in how art responds to ideological pressures.

 Whereas in English-speaking countries comics are for children or adults 'who should know better', in France and Belgium the form is recognized as the 'Ninth Art' and follows in the path of poetry, architecture, painting and cinema. The bande dessinée [comic strip] has its own national institutions, regularly obtains front-page coverage and has received the accolades of statesmen from De Gaulle onwards. On the way to providing a comprehensive introduction to the most francophone of cultural phenomena, this book considers national specificity as relevant to an

anglophone reader, whilst exploring related issues such as text/image expression, historical precedents and sociological implication. To do so it presents and analyses priceless manuscripts, a Franco- American rodent, Nazi propaganda, a museum-piece urinal, intellectual gay porn and a prehistoric warrior who's really Zinedine Zidane.

#### *Opera as Art FeniXX*

The sixteenth and seventeenth centuries in France were an epoch of spectacular artistic activity, exemplified by the chateaux of the Loire valley, the palace of Versailles, the paintings of Poussin and Claude, and the sculpture of Coysevox, which echo the political and cultural importance of France and the "Sun King." Anthony Blunt presents

major artists and their principal works chronologically, provides an overview of the main projects of the period and of the artistic personalities behind them, and clearly sets the historical context. This new edition, of one of the classics of the Pelican History of Art series, has been revised and updated with color illustrations and a new bibliography. Comics in French Rowman & Littlefield Geographical Aesthetics places the terms 'aesthetics' and 'geography' under critical question together, responding both to the increasing calls from within geography to develop a 'geographical aesthetics', and a resurgence of interdisciplinary interest in conceptual and empirical questions around geoaesthetics, environmental aesthetics, as well as the spatialities of the

aesthetic. Despite taking up an identifiable role within the geographical imagination and sensibilities for centuries, and having what is arguably a key place in the making of the modern discipline, aesthetics remains a relatively under-theorized field within geography. Across 15 chapters Geographical Aesthetics brings together timely commentaries by international, interdisciplinary scholars to rework historical relations between geography and aesthetics, and reconsider how it is we might understand aesthetics. In renewing aesthetics as a site of investigation, but also an analytic object through which we can think about worldly encounters, Geographical Aesthetics presents a reworking of our geographical imaginary of the aesthetic.

Cognitive mathematics provides insights into how mathematics works inside the brain and how it is interconnected with other faculties through so-called blending and other associative processes. This handbook is the first large collection of various aspects of cognitive mathematics to be amassed into a single title, covering decades of connection between mathematics and other figurative processes as they manifest themselves in language, art, and even algorithms. It will be of use to anyone working in math cognition and education, with each section of the handbook edited by an international

leader in that field.

In *Opera as Art: Philosophical Sketches*, Paul Thom argues for opera as an art, standing alongside other artforms that employ visual and sonic media to embody the great themes of human life. Thom contends that in great operatic art, the narrative and expressive content collaborate with the work's aesthetic qualities towards achieving this aim. This argument can be extended to modern operatic productions. At their best, these stagings are works of art in themselves, whether they give faithful renditions of the operas they stage and whether their aims go beyond interpretation to commentary and critique. This book is a philosophical introduction to the key

practices that comprise the world of opera: the making of the work; its interpretation by directors, critics, and spectators; and the making of an operatic production. Opera has always existed in a context of philosophical ideas, and this book is written for opera-lovers who would like to learn something about that philosophical context.

This study uncovers the plethora of new, innovative drawing strategies that shaped French visual arts at the height of France's imperial power. Horace

Lecoq de Boisbaudran, Eugene Guillaume, and Félix Ravaisson, among others, designed new drawing procedures that responded to leading concerns of modern art and the exigencies of modern life: landscape painting and picturesque tourism, industrial design, and the use of drawing as vehicles of knowledge production and in social control. From graphic regimes that were “purement mathématique” and demanded the practice of orthographic projection, to those that privileged the articulation of proportions and the cultivation of an internal measuring system, fin de siècle educators in the fine and applied arts radically transformed drawing strategies and its history. The shifting parameters of drawing pedagogy and practice unfold

onto a wider set of theoretical concerns central to humanistic inquiry and art-making today: the philosophy and cultural history of habit-based learning, the relation between industrialization and drawing, and the relation between art and mathematics. The book will be of interest to scholars working in art history, French studies, history of art education, history of philosophy, and history of science.

This Encyclopedia offers a fresh, integrated and creative perspective on the formation and foundations of philosophy and science in European modernity. Combining careful contextual reconstruction with arguments from traditional philosophy, the book examines methodological dimensions, breaks down traditional oppositions such as rationalism vs. empiricism, calls attention to gender issues, to 'insiders and outsiders', minor figures in philosophy, and underground movements, among many other topics. In addition, and in line with important recent transformations in the fields of

history of science and early modern philosophy, the volume recognizes the specificity and significance of early modern science and discusses important developments including issues of historiography (such as historical epistemology), the interplay between the material culture and modes of knowledge, expert knowledge and craft knowledge. This book stands at the crossroads of different disciplines and combines their approaches - particularly the history of science, the history of philosophy, contemporary philosophy of science, and intellectual and cultural history. It brings together over 100 philosophers, historians of science, historians of mathematics, and medicine offering a comprehensive view of early modern philosophy and the sciences. It

combines and discusses recent results from two very active fields: early modern philosophy and the history of (early modern) science.
