This book integrates the growing clinical research evidence related to the emerging transdisciplinary field of occupational health and wellness. It includes a wide range of important topics, ranging from current conceptual approaches to health and wellness in the workplace, to common problems in the workplace such as presenteeism/abstenteeism, common illnesses, job-related burnout, to prevention and intervention methods. It consists of five major parts. Part I, "Introduction and Overviews," provides an overview and critical evaluation of the emerging conceptual models that are currently driving the clinical research and practices in the field. This serves as the initial platform to help better understand the subsequent topics to be discussed. Part II, "Major Occupational Symptoms and Disorders," exposes the reader to the types of critical occupational health risks that have been well documented, as well as the financial and productivity losses associated with them. In Part III, "Evaluation of Occupational Causes and Risks to Workers' Health," a comprehensive evaluation of these risks and causes of such occupational health threats is provided. This leads to Part IV, "Prevention and Intervention Methods," which delineates methods to prevent or intervene with these potential occupational health issues. Part V, "Research, Evaluation, Diversity and Practice," concludes the book with the review of epidemiological, measurement, diversity, policy, and practice issues—with guidelines on changes that are needed to decrease the economic and health care impact of illnesses in the workplace, and

recommendations for future. All chapters provide a balance among theoretical models, current best-practice guidelines, and evidence-based documentation of such models and guidelines. The contributors were carefully selected for their unique knowledge, as well as their ability to meaningfully present this information in a comprehensive manner. As such, this Handbook is of great interest and use to health care and rehabilitation professionals, management and human resource personnel, researchers and academicians alike.

Assembling cultures takes a fine-grained look at workplace activism in car manufacturing between 1945 and 1982, using it as a key case for unpicking narratives around affluence, declinism

and class. It traces the development of the militant car worker stereotype, looking at the social relations which lay behind the industry's reputation for conflict. This book reveals a changing, complex world of social practices, cultural norms, shared values and expectations. From the 1950s, car workers developed shop-floor organisations of considerable authority, enabling some new demands of their working lives, but constraining other more radical political aims. This is a story of workers and their place in the power relations of post-war Britain. This book is invaluable to academics and students studying the history, sociology and politics of modern Britain, particularly those with an interest in power, rationality, class, labour, gender and race.
