Palliative Medicine

accompanied by discussion in a question-and-answer format.

Supportive and Palliative Care in Cancer Springer
Clinical Case Studies for the Family Nurse Practitioner is a key resource for advanced practice nurses and graduate students seeking to test their skills in assessing, diagnosing, and managing cases in family and primary care. Composed of more than 70 cases ranging from common to unique, the book compiles years of experience from experts in the field. It is organized chronologically, presenting cases from neonatal to geriatric care in a standard approach built on the SOAP format. This

includes differential diagnosis and a series of critical thinking questions ideal for self-assessment or classroom use.

Hospice Care for Children Oxford University Press
Over 90 case studies based on real life patient-care scenarios. Each case includes learning outcomes and references.

Research methods in palliative care
Dartmouth College Press

Case Studies in Palliative and End-of-Life Care uses a case-based approach to provide students and practitioners with an important learning tool to improve critical thinking skills and encourage discussion toward improving experiences for patients and their

families. The book is organized into three sections covering subjects related to communication, symptom management, and family care. Each case is presented in a consistent, logical format for ease of use, highlighting key evidence-based concepts including the case history, care setting, diagnosis and prognosis, assessment, treatment considerations, and family support. A key reference, Case Studies in Palliative and End-of-Life Care is an invaluable resource for clinicians who provide palliative care to patients with life-limiting illnesses and those at the end of life along with their families.

50 Studies Every

Palliative Care Doctor Should Know Oxford University Press, USA Providing much-needed focus on hospice projects in the context of unprecedented rates of societal ageing, this new reference book presents an overview of major recent developments in this rapidly evolving building type. The authors present an overview of the historical origins of the contemporary hospice and the diverse variations on the basic premise of hospice care, and offer a series of case studies of exemplary hospices. The most innovative work in this area over the past decade has been in Japan, the US, Canada and the UK, and the authors describe and analyze

examples both as individual projects and as comparable yet differing approaches. Hospice Architecture will be essential reading for anyone involved in the planning, design and construction of hospices.

Collaborative Practice in Palliative Care

Walter de Gruyter GmbH & Co KG

For patients and their loved ones, no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to

this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care,

consistent with their wishes. Dying in America evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and

the public to provide the best care possible for people nearing the end of life.

Cancer Screening in the Developing World
Elsevier Health Sciences

Praise for the first edition: "This is an excellent teaching guide and resource manual for instructors, gerontological nursing students, and practicing nurses and social workers who wish to learn more about geriatric concerns and care. It will be kept by nursing students long after they graduate as a guide to resources that will be valuable throughout their nursing careers. As a home care nurse working mainly with the geriatric community, I found the resources helpful in my

practice. As an instructor, I found the book to be a very useful guide for teaching geriatrics.”
Score: 90, 4 Stars
—Doody’s Medical Reviews “[This] is a unique volume that effectively addresses the lack of gerontology case studies for use with undergraduate nursing students. Case studies are a pedagogically powerful approach to active learning that offer opportunities to apply content to clinical practice.” —The Gerontologist “The case narrative approach of this book promotes active learning that is more meaningful to students (and practicing nurses) and more likely to increase the transfer of evidence into practice. An excellent resource

for faculty (staff educators) to facilitate critical learning skills.”
—Liz Capezuti, PhD, RN, FAAN Dr. John W. Rowe Professor in Successful Aging Co-Director, Hartford Institute for Geriatric Nursing New York University College of Nursing Vivid case examples help guide nurses in developing appropriate interventions that include complementary and alternative health therapies and provide a basis for evaluating outcomes. Exercises interspersed throughout each case study include numerous open-ended and multiple-choice questions to facilitate learning and critical thinking. The text is unique in that some of the presented cases focus on psychosocial

issues such as gambling addiction, hoarding behavior, emergency preparedness, and long-distance caregiving. Cases also depict geriatric clients who are living healthy, productive lives to counter myths and negative attitudes about older adults. Scenarios demonstrating ethical dilemmas prepare students to appropriately respond to “gray area” situations. The text is geared for AACN and NLN accreditation and is organized according to the needs of actual clinical settings. With cases that take place in the home and community or within primary, acute, and long-term care facilities, this book will be useful for courses

specific to gerontology nursing or across any nursing curriculum. New to the Second Edition: A completely new section of Aging Issues Affecting the Family New cases addressing health care disparities, aging in place, and prevention of catheter-associated urinary tract infection Additional contemporary case studies The addition of Quality for Safety in Nursing Education (QSEN) initiatives A greater focus on prioritization and delegation of client’s needs infused throughout exercises *Integrated Pharmacy Case Studies* Oxford University Press Awarded first place in the 2019 AJN Book of the Year Awards in the Gerontologic Nursing category second place

in the Advanced Practice Nursing category. Gain expert primary care of older adults with a case-based approach to geriatric primary care and multimorbidity management. Written by two leading academic and clinical experts in geriatric primary care, *Case Studies in Geriatric Primary Care and Multimorbidity Management, 1st Edition* uses detailed Exemplar Case Studies and Practice case studies to teach you how to think like an expert geriatric clinician. Because most older adults have more than one condition when seeking care, both Exemplar and Practice Case Studies place a strong emphasis on "multimorbidity"

management, (the management of patients with a host of complex, interacting conditions). To provide extensive practice in learning how to think like an expert, case studies reflect the reality that care does not necessarily begin or end in the primary care setting, cases move fluidly from primary care to acute care to inpatient rehabilitation to assisted living to long-term care. Building on foundational introductory chapters, cases also call on you to develop interprofessional collaboration skills and reflect the diversity of today's older adults, in terms of age (young-old to old-old), gender, culture, ethnicity, sexuality, socioeconomic status,

and more! As you work through both basic-level and advanced Practice Case Studies, you can make extensive notes in the printed book and then go online to submit answers for grading and receive expert feedback for self-reflection. - NEW!

Introductory unit on the core principles of caring for older adults gives you a strong foundation in the principles of geriatric primary care and multimorbidity management. - NEW! and UNIQUE!

Exceptionally detailed, unfolding Exemplar Case Studies demonstrate how an expert advanced practitioner "thinks clinically" to provide care to older adults with multiple conditions. - NEW and

UNIQUE! Exceptionally detailed, unfolding Practice Case Studies emphasize patient diversity and multimorbidity management across healthcare settings to help you develop advanced clinical reasoning skills for geriatric primary care. - NEW and UNIQUE!

Strong emphasis on multimorbidity management focuses on caring for older adults with multiple chronic conditions. - NEW! Emphasis on the continuum of care across settings reflects the reality that care does not necessarily begin or end in the primary care setting but can move from primary care to acute care to inpatient rehabilitation to assisted living to long-term care, and so

forth. - NEW! Online answer submission for grading and expert feedback for self-reflection. - NEW! Emphasis on patient diversity reflects the makeup of today's older adult, population in terms of age (young-old to old-old), gender, culture, ethnicity, sexuality, socioeconomic status, and more. - NEW! Emphasis on interprofessional collaboration use Exemplar Case Studies and Practice Case Studies to allow you to demonstrate your interprofessional collaboration skills.

Ethics, Conflict and Medical Treatment for Children E-Book

John Wiley & Sons
This book will be the first of its kind to offer intensive conversation analysis on patient-

clinician interactions in the context of palliative medicine. The book focuses on a series of individual case studies of conversations that revolve, in each case, around one key critical term that is often evoked or understood differently by clinicians and patients.

Case Studies in Pain Management John Wiley & Sons

This second edition provides the most up-to-date information on all aspects of palliative care including recent developments (including COVID-19), global policies, service provision, symptom management, professional aspects, organization of services, palliative care for specific populations, palliative care emergencies,

ethical issues in palliative care, research in palliative care, public health approaches and financial aspects of care. This new Textbook of Palliative Care remains a unique, comprehensive, clinically relevant and state-of-the art book, aimed at advancing palliative care as a science, a clinical practice and as an art. Palliative care has been part of healthcare for over fifty years but we still needs to be explained. Healthcare education and training has been slow to recognize the vital importance of ensuring that all practitioners have a good understanding of what is involved in the care of people with serious or advanced illnesses and their families.

However, the science of palliative care is advancing and this new edition will contribute to a better understanding of this specialty. This new edition offers 20 new chapters out of over 120, written by experts in their given fields provide up-to-date information on a wide range of topics of relevance to those providing care towards the end of life no matter what the disease may be. We present a global perspective on contemporary and classic issues in palliative care with authors from a wide range of disciplines involved in this essential aspect of care. The Textbook includes sections addressing aspects such as symptom

management and care provision, organization of care in different settings, care in specific disease groups, palliative care emergencies, ethics, public health approaches and research in palliative care. This new Textbook will be of value to practitioners in all disciplines and professions where the care of people approaching death is important, specialists as well as non-specialists, in any setting where people with serious advanced illnesses are residing. It is also an important resource for researchers, policy-and decision-makers at national or regional levels. Neither the science nor the art of palliative care will stand still so the

Editors and contributors from all over the world aim to keep this Textbook updated so that the reader can find new evidence and approaches to care. *The Best Care Possible* CRC Press
Compassionate communities are communities that provide assistance for those in need of end of life care, separate from any official health service provision that may already be available within the community. This idea was developed in 2005 in Allan Kellehear's seminal volume- *Compassionate Cities: Public Health and End of Life Care*. In the ensuing ten years the theoretical aspects of the idea have been continually explored, primarily rehearsing

academic concerns rather than practical ones. *Compassionate Communities: Case Studies from Britain and Europe* provides the first major volume describing and examining compassionate community experiments in end of life care from a highly practical perspective. Focusing on community development initiatives and practice challenges, the book offers practitioners and policy makers from the health and social care sectors practical discussions on the strengths and limitations of such initiatives. Furthermore, not limited to providing practice choices the book also offers an important and timely

impetus for other practitioners and policy makers to begin thinking about developing their own possible compassionate communities. An essential read for academic, practitioner, and policy audiences in the fields of public health, community development, health social sciences, aged care, bereavement care, and hospice & palliative care, *Compassionate Communities* is one of only a handful of available books on end of life care that takes a strong health promotion and community development approach. *Innovations in Hospice Architecture*
Pharmaceutical Press
What should happen

when doctors and parents disagree about what would be best for a child? When should courts become involved? Should life support be stopped against parents' wishes? The case of Charlie Gard, reached global attention in 2017. It led to widespread debate about the ethics of disagreements between doctors and parents, about the place of the law in such disputes, and about the variation in approach between different parts of the world. In this book, medical ethicists Dominic Wilkinson and Julian Savulescu critically examine the ethical questions at the heart of disputes about medical treatment for children. They use the Gard case as a

springboard to a wider discussion about the rights of parents, the harms of treatment, and the vital issue of limited resources. They discuss other prominent UK and international cases of disagreement and conflict. From opposite sides of the debate Wilkinson and Savulescu provocatively outline the strongest arguments in favour of and against treatment. They analyse some of the distinctive and challenging features of treatment disputes in the 21st century and argue that disagreement about controversial ethical questions is both inevitable and desirable. They outline a series of lessons from the Gard case and propose a radical new

'dissensus' framework for future cases of disagreement. - This new book critically examines the core ethical questions at the heart of disputes about medical treatment for children. - The contents review prominent cases of disagreement from the UK and internationally and analyse some of the distinctive and challenging features around treatment disputes in the 21st century. - The book proposes a radical new framework for future cases of disagreement around the care of gravely ill people.

Palliative Care in Oncology

Columbia University Press

Home health care is an important aspect of community health and a growing area of healthcare services.

Clinical Case Studies in Home Health Care uses a case-based approach to provide home healthcare professionals, educators, and students with a useful tool for thoughtful, holistic care. The book begins with a thorough and accessible introduction to the principles of home health care, including a discussion of supporting theoretical frameworks and information on managing complexities, transitioning patients to home care, and preparation for the home visit. Subsequent sections are comprised entirely of case studies organized by body system. Though cases are diverse in content, each is presented in a consistent manner,

incorporating relevant data about the patient and caregivers and the approach to patient care and promoting a logical approach to patient presentation. Cases also include helpful tips about reimbursement practices, cultural competence, community resources, and rehabilitation needs.

Palliative Care

Support Class

Professional Publishing
This book provides a clear approach to establishing a user involvement system in a healthcare organisation and its potential impact on cancer services. Using a tool kit style approach drawing on examples of successful past projects and case studies to provide evidence of good

practice it describes how to plan and implement different stages of user involvement enabling organisations to draw on user experience and expertise to evaluate develop and improve the quality of service that they provide.

Members of regional cancer networks multidisciplinary cancer care teams and all those involved in the NHS cancer services will find this toolkit interesting reading.

Case Studies in Geriatric Primary Care & Multimorbidity

Management Springer Publishing Company

The first study guide for the CHPN® certification exam! This must-have study guide for nurses seeking to obtain Certified Hospice and Palliative

Nurse (CHPN®) status provides state-of-the-art information about all aspects of this specialty. It features 300 carefully selected Q&As that offer a detailed rationale for each question, along with tips and strategies to promote exam mastery and frequently asked questions about the exam. Additional questions are arranged in chapters mirroring the exam blueprint and the number of questions for each category correlates with the exam matrix. Case-based scenarios embodied within the questions facilitate the application of knowledge in a problem-solving format. A complete practice exam is included as well. Brief topical reviews address hospice and palliative

care nursing practice in all of its dimensions, including physical, spiritual, and psychosocial. The resource highlights information that forms the basis of end-of-life care, such as communication and family-centered care. Additionally, high-level skills used by hospice and palliative care nurses, such as drug and dosage conversion and the use of infusion therapy, are covered as well. Key Features: Delivers the first study guide for hospice and palliative nurses seeking CHPN® certification Provides concise, up-to-date knowledge on all aspects of the specialty Includes information about the exam, answers to commonly asked questions, and tips and strategies for

exam mastery Includes practice questions and answers following each chapter Provides a final comprehensive practice exam that offers 300 Q&As with detailed answer rationales that mirror the exam format Presents case-based scenarios within the questions that facilitate the application of knowledge

Palliative Skills for Frontline Clinicians
Penguin

The third edition of this successful book continues to offer a panoramic view of palliative care. It introduces a number of new topics including Neurological Disorders, The Last Days and Palliative Sedation. The contributors illustrate, through the case studies, the desired skills, attitudes, and

knowledge required in palliative medicine.

Oxford Handbook of Public Health Practice
National Academies Press

50 Studies Every Palliative Doctor Should Know presents key studies that have shaped the practice of palliative medicine.

Selected using a rigorous methodology, the studies cover topics including: palliative care, symptom assessment and management, psychosocial aspects of care and

communication, and end-of-life care. For each study, a concise summary is presented with an emphasis on the results and limitations of the study, and its implications for practice. An illustrative clinical case concludes

each review, followed by brief information on other relevant studies. This book is a must-read for health care professionals and anyone who wants to learn more about the data behind clinical practice.

LGBTQ-Inclusive Hospice and Palliative Care

Routledge
Children with life-threatening and terminal illnesses--and their families-- require a unique kind of care to meet a wide variety of needs. This book, the first edition of which won the 1993 Pediatric Nursing Book of the Year Award, provides an authoritative source for the many people involved in caring for dying children. It draws together contributions from leading authorities in a

comprehensive, fully up-to-date resource, with an emphasis on practical topics that can be put to immediate use. The book covers the entire range of issues related to the hospice environment and is intended for all those who participate in the hospice-care process: physicians, nurses, social workers, teachers, clergy, family therapists, parents, and community service volunteers.

Textbook of Palliative Care

Routledge
With the growth of neuropalliative care as a rapidly-emerging subspecialty in neurology, it is essential that clinicians develop core skills to offer high-quality, patient-centred care. This book captures the essence of palliative

care in neurology, highlighting abundant opportunities to incorporate key principles into patients' management plans. Through a pragmatic, case-based format with suggested references for readers to expand their knowledge on a range of topics, this guide explores didactic opportunities. From patients facing challenging end-of-life decisions, families struggling to determine the treatment intensities, to clinicians leading difficult conversations, these cases are straightforward and relatable. Demonstrating the breadth of palliative care opportunities occurring on the spectrum of neurologic disease, this essential toolkit supports

clinicians at all levels, providing assistance for patients who have chronic, progressive, or terminal neurologic diseases. Compelling and thought-provoking, this guide highlights the many opportunities to ease suffering and to improve quality of life.

Certified Hospice and Palliative Nurse (CHPN) Exam Review

Cambridge University Press

The death of a child is a special sorrow. No matter the circumstances, a child's death is a life-altering experience. Except for the child who dies suddenly and without forewarning, physicians, nurses, and other medical personnel usually play a central role in the lives of children who die and their families.

At best, these professionals will exemplify "medicine with a heart." At worst, families' encounters with the health care system will leave them with enduring painful memories, anger, and regrets. When *Children Die* examines what we know about the needs of these children and their families, the extent to which such needs are "and are not" being met, and what can be done to provide more competent, compassionate, and consistent care. The book offers recommendations for involving child patients in treatment decisions, communicating with parents, strengthening the organization and

delivery of services, developing support programs for bereaved families, improving public and private insurance, training health professionals, and more. It argues that taking these steps will improve the care of children who survive as well as those who do not "and will likewise help all families who suffer with their seriously ill or injured child. Featuring illustrative case histories, the book discusses patterns of childhood death and explores the basic elements of physical, emotional, spiritual, and practical care for children and families experiencing a child's life-threatening illness or injury.
