Global Strategy: Competing in the Connected Economy details how firms enter, compete and grow in foreign markets. Jain moves away from the traditional focus on developed countries and their multinational enterprises, instead focusing on both developed and emerging economies, as well as their interaction in an increasingly connected world. As the current global business environment is increasingly shaped—and

connected—by faster technological developments, geopolitical forces, emerging economies, and new multinationals from those economies, this highly charged dynamic provides rich opportunity to revisit mainstream paradigms in globalization, innovation, and global strategy. The book rises to the challenge, exploring new competitive phenomena, new business models, and new strategies. Rich illustrations, real-world examples, and case data,

provide students and executives with the insights necessary to connect, compete, and grow in a globalized business environment. This bold book succinctly covers strategy models and implementation for a range of global players, providing students of strategy and international business with a rich understanding of the contemporary business environment. For access to additional materials, including Powerpoint slides, a list of suggested cases, and sample

syllabus, please contact Vinod Jain (vinod.jain01@yahoo.com).

Dragon in the Air: Transformation of China's Aviation Industry and Air Force IDRC

Fibre2Fashion magazine—the print venture of Fibre2Fashion.com since 2011—is circulated among a carefully-chosen target audience globally, and reaches the desks of top management and decision-makers in the textiles, apparel and fashion industry. As one of

India's leading industry magazines for the entire textile value chain, Fibre2Fashion Magazine takes the reader beyond the mundane headlines, and analyses issues in-depth.

World Aerospace KW Publishers Pvt Ltd

This title examines the dynamics of the globalisation processes and the emergence of new locations for innovation and its implications.

Dragon in the Air: Transformation of China's Aviation Industry and Air Force is a comprehensive and multidimensional study of the air force and the emerging aviation industry in PRC. The author has made a bold effort to trace the changing character of Chinese Air Force from the time of nationalists and perspicuously hunted down the history by dividing PLAAF into three distinct periods. The first stage from 1949-1979 has been characterized by the early blues of PLAAF

under Mao's leadership. Deng then had an overbearing influence in the second stage from 1979-1993, also instrumental in initiating the process of transformation from an ancillary of PLA into an independent arm. The third stage was however the defining moment which witnessed the start of modernization of PLAAF under the leadership of Jiang Zemin. The author has very lucidly tried to explain the strong link between modernisation of PLAAF and the emergence

of China's aviation industry and therefore divided the book in two parts. While the first part of the book maintains focus on the air force and the process of modernisation; the second part dwells with the evolution of the aviation industry and the changes in the organisation structure. He has pointedly highlighted China's increasing defence spending and growing military capabilities resulting in China developing new aerial platforms, ballistic

missiles and modern firepower. As a result China is enhancing strategic power projection by building capabilities to carry out air strikes, reconnaissance and early warning and air and missile defence to put together a potent military force by the middle of this century.

This book is a comprehensive compilation of chapters

on materials (both established and evolving) and material technologies that are important for aerospace systems. It considers aerospace materials in three Parts. Part I covers Metallic Materials (Mg, Al, Al-Li, Ti, aero steels, Ni, intermetallics, bronzes and Nb alloys); Part II deals with Composites (GLARE, PMCs, CMCs and Carbon based CMCs); and Part III considers Special Materials. This compilation has ensured that no important aerospace material

system is ignored. Emphasis is laid in each chapter on the underlying scientific principles as well as basic and fundamental

mechanisms leading to processing, characterization, property evaluation and applications. This book

will be useful to students, researchers and professionals working in the domain of aerospace materials.
