Based on the findings of the four-year FIDDO (Focused Investigation of Document Delivery Options) project, a study within the eLib Programme in the UK. The FIDDO team worked with library managers and end-users to develop an understanding of the issues involved with the options, methods and management of document delivery and provide recommendations. This title, as the name suggests also brings together literature on document access. The findings of *Planning Document Access: Options and Opportunities*, present objective and reliable data to inform the LIS community and aid their decision making for document delivery services.

This book constitutes the refereed proceedings of the 5th Software Quality Days Conference (SWQD) held in Vienna, Austria, in January 2013. This professional symposium and conference offers a range of comprehensive and valuable opportunities for advanced professional training, new ideas, and networking with a series of keynote speeches, professional lectures, exhibits, and tutorials. The seven scientific full papers accepted for SWQD were each peer-reviewed by three or more reviewers and selected out of 18 high-quality submissions. Further, two keynotes and six short papers on

promising research directions were also presented and included in order to spark discussions between researchers and practitioners. The papers are organized into topical sections on risk management; software and systems testing; test processes; model-based development; and process improvement and measurement.

Information Technology for Librarians and Information

This book offers everything you need to know about selecting and implementing the best integrated library system (ILS) for your library, whether you purchase and install it yourself or hire a consultant to assist you. This is the book you've been waiting for. *Integrated Library Systems: Planning, Selecting, and Implementing* is an all-inclusive guide to acquiring a new ILS. Detailed and practical, the book covers every step of the process, from cost-benefit analysis, to evaluating software, writing the request for proposal, and implementation and training. You'll learn about different types of integrated library systems—standalone, turnkey, hosted, software-as-a-service (cloud computing), and open-source—and how to assess your facility and staff to find the best fit. The book also covers evaluation of software and hardware; third-party add-ons, such as RFID; and writing successful budget proposals and justification statements. There is even specific, headache-saving advice on working with sales reps, such as the warning not to ever accept the statement: "The vendor will not be held accountable to the contents of the RFP." Even if you're working with a consultant, this book will help you understand the process and make informed decisions.

Written in a practical style, this book uses the Linux shell in many chapters, demonstrating the execution of commands and their output. With liberal use of screenshots and plenty of code samples accompanied by careful explanation, it will make the task of installing and configuring Koha easy and straightforward. All chapters are written in a way that makes them applicable to various Linux distributions. This book is aimed at Linux system administrators who need to install and maintain Koha. If you are a system administrator who wants to set up an open source integrated library system, then this book is for you. It will also be useful for system administrators who require help with specific aspects of implementing Koha.

This comprehensive primer introduces information technology topics foundational to many services offered in today's libraries and information centers. Written by a librarian, it clearly explains concepts familiar to the I.T. professional with an eye toward practical applications in libraries for the aspiring technologist. Chapters begin with a basic introduction to a major topic then go into enough technical detail of relevant technologies to be useful to the student preparing for library technology and systems work or the professional needing to converse effectively with technology experts. Many chapters also present current issues or trends for the subject matter being discussed. The twelve chapters cover major topics such as technology support, computer hardware, networking, server administration, information security, web development,

software and systems development, emerging technology, library management technologies, and technology planning. Each chapter also includes a set of pedagogical features for use with instruction including: Chapter summary List of key terms End of chapter question set Suggested activities Bibliography for further reading List of web resources Those who will find this book useful include library & information science students, librarians new to systems or information technology responsibilities, and library managers desiring a primer on information technology.

- New York Times bestseller
- The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world

"At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope." —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming*

"There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom." —David Roberts, *Vox*

"This is the ideal environmental sciences

textbook—only it is too interesting and inspiring to be called a textbook.”

—Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

Technology, Change and the Academic Library Rowman & Littlefield
Project Report from the year 2012 in the subject Library Science, Information- /

Documentation Science, printed single-sided, grade: -, Kampala International University - Dar-es-salaam College (computer studdies), course: none, language: English, comment: I undertook this project together with my student and friend mwadawa sadallar. She was very supportive especially in the design of the system. Finally she graduated with a degree of IT. i have a degree in computer science, masters of MIS, and am currently pursuing a PhD of information systems. Am a lecturer of Artificial intelligence, compiler construction, programing and information systems., abstract: For many years, universities & colleges have used file based / manual system to manage library use. Whereas this was quite efficient for some time, due to the expansion of the library and increase in the number of students, the system wastes a lot of time especially when searching for a particular book or resource. In response to this problem, more librarians have been added (employed), and this has escalated the cost of managing the library. This inefficiency, led to the study that was aimed at automating the book keeping function of the library. A study was carried out at Kampala International University Dar salaam Campus and it was discovered that the manual system had inefficiencies ranging from time wastage, high cost of operation in terms of human resources, long search time, data redundancy among others. A computer based library management system was developed using visual studio. The new system allows the user to add books into the system, search for books from the system database, track member information, manage borrowing among others. By automating library operations, the university will enjoy the

advantages of using databases and transaction processing systems. *Cyberscience Atlantic Publishers & Dist* ICDL conferences are recognized on of the most important platform in the world where noted expert share their experiences. Web-based Instruction The Energy and Resources Institute (TERI) The genre of library services platforms helps libraries manage their collection materials and automate many aspects of their operations by addressing a wider range of resources and taking advantage of current technology architectures compared to the integrated library systems that have previously dominated. This issue of *Library Technology Reports* explores this new category of library software, including its functional and technical characteristics. It highlights the differences with integrated library systems, which remain viable for many libraries and continue to see development along their own trajectory. This report provides an up-to-date assessment of these products, including those that have well-established track records as well as those that remain under development. The relationship between library services platforms and discovery services is addressed. The report does not provide detailed listings of features of each product, but gives a general overview of the high-level organization of functionality, the adoption patterns relative to size, types, and numbers of libraries that have implemented them, and how these libraries perceive their performance. This

seminal category of library technology products has gained momentum in recent years and is positioned to reshape how libraries acquire, manage, and provide access to their *Library Project Funding* Springer From the ill-fated dot-com bubble to unprecedented merger and acquisition activity to scandal, greed, and, ultimately, recession -- we've learned that widespread and difficult change is no longer the exception. By outlining the process organizations have used to achieve transformational goals and by identifying where and how even top performers derail during the change process, Kotter provides a practical resource for leaders and managers charged with making change initiatives work.

The rampant nature of technology has caused a shift in information seeking behaviors. In addition, current trends such as evidence based medicine and information literacy mean that one time instructional sessions cannot provide our patrons with all of the skills they need. For this reason, many librarians are working to develop curriculum based instruction that is semester long or consisting of many sessions throughout an academic program. In addition to teaching, librarians are also becoming embedded in the curriculums they support by serving as web-based course designers, problem-based learning facilitators, or members of curriculum committees. Although it is fairly obvious that library instruction is important and that librarians should be equipped to provide this instruction, the majority of ALA accredited programs offer only one course on library instruction, the courses are only available as electives, and they

are often only offered once a year. Librarians need to gain their instructional experiences through real life experiences, mentors, and of course, books like this one. Many books commonly discuss one-shot sessions and provide tips for getting the most out of that type of instruction. There are not as many that discuss curriculum based instruction in a section, let alone an entire book. *Curriculum-Based Library Instruction: From Cultivating Faculty Relationships to Assessment* highlights the movement beyond one-shot instruction sessions, specifically focusing on situations where academic librarians have developed curriculum based sessions and/or become involved in curriculum committees. This volume describes and provides examples of librarians' varied roles in the curriculum of education programs. These roles include semester long or multi-session instructor, web-based course designer, problem-based learning facilitator, and member of a curriculum committee. In addition to describing the roles that librarians have in supporting curriculum, the book describes how to carry out those roles with sections devoted to adult learning theory, teaching methods, developing learning objectives, and working with faculty to develop curriculum. Examples of library sessions devoted to information literacy, evidence based practice, information literacy, and biomedical informatics are included. This book is not limited to one mode of delivering information and covers examples of face to face, distance and blended learning initiatives.

Computer software evaluation is the process you go through to decide if the software fits what you need and want. Most people start by looking at software

packages but you need to look at and survey the users first. Imagine you need a new car. What you may "want" is an exciting two-seater sports car but if you have a family and or pets what you may "need" may be something quite different. How do you decide? This book details a real-world project of computer software evaluation.
