*Engage Tb: Integrating Community-Based Tuberculosis Activities Into the Work of Nongovernmental and Other Civil Society Organizat* Springer Science & Business Media

The artificial intelligence (AI) landscape has evolved significantly from 1950 when Alan Turing first posed the question of whether machines can think. Today, AI is transforming societies and economies. It promises to generate productivity gains, improve well-being and help address global challenges, such as climate change, resource scarcity and health crises.

Visibilidade e estrategias de publicacoes, o papel das revisoes cientificas e os sistemas nacionais de pesquisa.

*Urban Drainage* Academic Press

"Tuberculosis (TB) affected an estimated 8.7 million people and caused 1.4 million deaths globally in 2011, including 0.5 million women and at least 64 000 children. About 13% of TB occurs among people living with HIV, and TB causes almost a quarter of AIDS deaths. There is evidence of links between TB and noncommunicable diseases such as diabetes mellitus and with determinants of ill-health like tobacco and drug use, alcoholism and malnutrition. TB mostly affects the productive segment of society in their prime. One third of people estimated to have TB are either not reached for diagnosis and treatment by the current health systems or are not being reported. Even in patients who are identified, TB is often diagnosed and treated late. In order to reach the unreached and to find TB patients early in the course of their illness, a wider range of stakeholders already involved in community-based activities needs to be engaged. These include the nongovernmental organizations (NGOs) and other civil society organizations (CSOs) that are active in community-based development, particularly in primary health care, HIV infection

and maternal and child health, but have not yet included TB in their priorities and activities. NGOs and other CSOs are non-profit organizations that operate independently from the state and from the private for-profit sector. They include a broad spectrum of entities such as international, national and local NGOs, community-based organizations (CBOs), faith-based organizations (FBOs), patient-based organizations and professional associations. CBOs are membership-based non-profit organizations that are usually self-organized in specific local areas (such as a village) to increase solidarity and mutual support to address specific issues. For example, these include HIV support groups, women's groups, parent-teacher associations and micro-credit village associations. CBO membership is comprised entirely of community members themselves, so these organizations can be considered to represent the community most directly. NGOs and other CSOs engage in activities that range from community mobilization, service delivery, and technical assistance to research and advocacy. The strengths of NGOs and other CSOs active in health care and other development interventions at the community level include their reach and spread and their ability to engage marginalized or remote groups. These organizations have a comparative advantage because of their understanding of the local context. Greater collaboration between NGOs and other CSOs and local and national governments could greatly enhance development outcomes. A more decentralized approach that formally recognizes the critical role of NGOs and other CSOs as partners addressing gaps through support to community-based actions will expand TB prevention, diagnosis, treatment and care activities. Community-based TB activities cover a wide range of activities contributing to prevention, diagnosis, improved treatment adherence and care that positively influence the outcomes of drug-sensitive, drug resistant and HIV-associated TB. The activities also include community mobilization to promote effective communication and participation among community members to generate demand for TB prevention, diagnosis, treatment and care services. While diagnostic tests for TB continue to be performed in clinical settings, for lack of simpler diagnostic methods, community-based TB activities are conducted outside the premises of formal health facilities (e.g.

hospitals, health centres and clinics) in community-based structures (e.g. schools, places of worship, congregate settings) and homesteads. Such community-based TB activities could and should be integrated with other community-based activities supporting primary health care services, including those for HIV infection, maternal and child health and noncommunicable diseases to improve synergy and impact. Community-based TB activities utilize community structures and mechanisms through which community members, CBOs and groups interact, coordinate and deliver their responses to the challenges and needs affecting their communities."--Page 1.

**Spaces and Identities in Border Regions** transcript Verlag Series Editor: Peter Calow, Department of Zoology, University of Sheffield, England The main aim of this series will be to illustrate and to explain the way organisms 'make a living' in nature. At the heart of this - their functional biology - is the way organisms acquire and then make use of resources in metabolism, movement, growth, reproduction, and so on. These processes will form the fundamental framework of all the books in the series. Each book will concentrate on a particular taxon (species, family, class or even phylum) and will bring together information on the form, physiology, ecology and evolutionary biology of the group. The aim will be not only to describe how organisms work, but also to consider why they have come to work in that way. By concentration on taxa which are well known, it is hoped that the series will not only illustrate the success of selection, but also show the constraints imposed upon it by the physiological, morphological and developmental limitations of the groups. Another important feature of the series will be its organismic orientation. Each book will emphasize the importance of functional integration in the day to-day lives and the evolution of organisms. This is crucial since, though it may be true that organisms can be considered as collections of gene determined traits, they nevertheless interact with their environment as integrated wholes and it is in this context that individual traits have been subjected to natural selection and have evolved. *Phylogeography of Southern European Refugia* Springer Cet ouvrage s'adresse essentiellement aux élèves des sections préparatoires au BEP carrières sanitaires et sociales. Il respecte

scrupuleusement le programme de biologie humaine des deux années de cette formation. Il met en application les méthodologies préconisées dans les instructions pédagogiques. Chaque chapitre est introduit par des travaux pratiques ou des travaux dirigés. Les travaux pratiques mettent en œuvre des observations ou des dissections d'organes, des examens microscopiques, des expériences et présentent des résultats. L'interprétation des observations et des expériences ainsi que le traitement des résultats figurent dans les cours qui succèdent immédiatement aux travaux pratiques ou aux travaux dirigés. Cette conception de l'ouvrage permet le développement de l'esprit d'observation et d'analyse et débouche sur une mémorisation facile des connaissances. Dans sa finalité professionnelle, cet ouvrage aborde des notions de physiopathologie et de pathologie utiles pour l'enseignement des sciences médico-sociales et des techniques professionnelles (techniques de soins, d'hygiène et de confort, techniques de secourisme). Bien illustré, il définit un certain nombre de termes scientifiques et médicaux au fur et à mesure de l'introduction de ces termes. Ce livre peut être également conseillé aux élèves préparant la mention complémentaire " Aide à domicile ". Il sera utile aux candidats préparant les concours d'entrée aux écoles paramédicales (écoles d'aide-soignantes et écoles d'auxiliaires de puériculture). Il peut être enfin un ouvrage de référence pour tous ceux qui sont engagés dans des formations paramédicales et sociales : - certificat d'aptitude aux fonctions d'aide-soignant (CAFAS), - certificat d'auxiliaire de puériculture, - certificat d'aptitude aux fonctions d'aide à domicile, - certificat d'aptitude aux fonctions d'aide médico-psychologique.

*Zoonoses and communicable diseases common to man and animals* IRD Orstom

These OECD Biosafety Consensus Documents identify elements of scientific information used in the environmental safety and risk assessment of transgenic organisms which are common to OECD member countries. This is intended to encourage information sharing and prevent duplication of effort among countries. This book offers ready access to those consensus documents which have been published thus far. As such, it should be of value to applicants for commercial uses of transgenic crops, regulators in national authorities as well as the wider scientific community. More information on.

Cytogenomics demonstrates that chromosomes are crucial in understanding the human genome and that new high-throughput approaches are central to advancing cytogenetics in the 21st century. After an introduction to (molecular) cytogenetics, being the basic of all cytogenomic research, this book highlights the strengths and newfound advantages of cytogenomic research methods and technologies, enabling researchers to jump-start their own projects and more effectively gather and interpret chromosomal data. Methods discussed include banding and molecular cytogenetics, molecular combing, molecular karyotyping, next-generation sequencing, epigenetic study approaches, optical mapping/karyomapping, and CRISPR-cas9 applications for cytogenomics. The book's second half demonstrates recent applications of cytogenomic techniques, such as characterizing 3D chromosome structure across different tissue types and insights into multilayer organization of chromosomes, role of repetitive elements and noncoding RNAs in human genome, studies in topologically associated domains, interchromosomal interactions, and chromoanagenesis. This book is an important reference source for researchers, students, basic and translational scientists, and clinicians in the areas of human genetics, genomics, reproductive medicine, gynecology, obstetrics, internal medicine, oncology, bioinformatics, medical genetics, and prenatal testing, as well as genetic counselors, clinical laboratory geneticists, bioethicists, and fertility specialists. Offers applied approaches empowering a new generation of cytogenomic research using a balanced combination of classical and advanced technologies Provides a framework for interpreting chromosome structure and how this affects the functioning of the genome in health and disease Features chapter contributions from international leaders in the field

*Fisheries in the Pacific* Springer Science & Business Media

The value of the canine nose is well-documented, and working dogs are being utilized for their olfactory skills in an increasing number of fields. Not only are dogs used by police, security, and the military, but they are also now used in forensic science, in medical detection of disease, in calculating population trends of endangered species and e

Integrative Biophysics Biologie humaine

Facioscapulohumeral muscular dystrophy (FSHD) is a genetic

disorder involving slowly progressive muscle degeneration in which the muscles of the face, shoulder blades and upper arms are among the most severely affected. It is the third most common inherited muscular dystrophy, affecting 1 in 20,000. The search for the molecular basis of the disease is of interest to all genetic researchers, involving a deletion outside a coding region resulting in over-expression of adjacent genes. This volume summarizes the current understanding of the disorder, including clinical, molecular and therapeutic aspects.

*Français Interactif* Archaeopress Archaeology

*Fisheries in the Pacific: The Challenges of Governance and Sustainability* is a multidisciplinary book, which examines various aspects of coastal and oceanic fisheries in Pacific waters. These interrelated fisheries sectors are critical for regional food security and also represent a reserve of food resources for the rest of the world. The introduction and eight chapters highlight that both these sectors raise major economic and ecological issues while revealing significant social changes, political asymmetries and alliances, geostrategic rationales, developments in legislation, customary dynamics, and conservation challenges. Through complementary approaches and interpretations of both quantitative and qualitative data, this book aims to contribute to a better understanding of the current situation of fisheries in the Pacific. It also responds to the compelling need to establish a constructive and ongoing dialogue on the matter between social scientists and environmental scientists, based in Europe and in the Pacific Islands, and between these experts and the various stakeholders and policy-making institutions involved in the Pacific region.

*Embodiment in Evolution and Culture* United Nations

Three years ago when Professor Garry Cole visited our Mycology unit at the Pasteur Institute we discussed the possibility of organizing a small International Symposium on "Isolation, Purification and Detection of Fungal Antigens" limited to 8 American/Canadian scientists and to 8 French participants. The location chosen was the Pasteur Institute because of the historical and current importance of the Institute as a Center for Research in Immunology and Medical Mycology. The interest demonstrated by all medical mycologists we contacted led us to expand the small original meeting to an international symposium in which all aspects of antigens of pathogenic and allergenic fungi and

actinomycetes related to man, animals, and even plants would be discussed. Our wish was also to hold this Symposium in the same week as the Anniversary meeting of the French Society of Medical Mycology which was founded at the Pasteur Institute 30 years ago with my colleagues Gabriel Segretain and Francois Mariat.

**French books in print, anglais** OECD Publishing

This book has its origin in a conference held at the British School at Athens in 2011 which aimed to explore the range of new archaeological information now available for the seventh century in Greek lands. It presents material data, combining accounts of recent discoveries (which often enable reinterpretation of older finds), regional reviews, and archaeologically focused critique of historical and art historical approaches and interpretations. The aim is to make readily accessible the material record as currently understood and to consider how it may contribute to broader critiques and new directions in research. The geographical focus is the old Greek world encompassing Macedonia and Ionia, and extending across to Sicily and southern Italy, considering also the wider trade circuits linking regional markets. The book does not aim for the pan-Mediterranean coverage of recent works: given that much of the latest innovative and critical scholarship has focused on the western Mediterranean in particular, it is necessary to bring old Greece back under the spotlight and to expose to critical scrutiny the often Athenocentric interpretative frameworks which continue to inform discussion of other parts of the Mediterranean.

**Pathways to Modern Chemical Physics** Elsevier

The second edition of this quick reference handbook for obstetricians and gynecologists and primary care physicians is designed to complement the parent textbook *Clinical Obstetrics: The Fetus & Mother*. The third edition of *Clinical Obstetrics: The Fetus & Mother* is unique in that it gives in-depth attention to the two patients - fetus and mother, with special coverage of each patient. *Clinical Obstetrics* thoroughly reviews the biology, pathology, and clinical management of disorders affecting both the fetus and the mother. *Clinical Obstetrics: The Fetus & Mother - Handbook* provides the practising physician with succinct, clinically focused information in an easily retrievable format that facilitates diagnosis, evaluation, and treatment. When you need fast answers to specific questions, you can turn with confidence to this streamlined, updated reference.

Les indicateurs de science pour les pays en développement  
Academic Press

Japanese encephalitis and West Nile viruses are members of the Japanese encephalitis serological group of the genus *Flavivirus* and therefore closely related genetically and antigenically. They share a number of properties, including the use of birds as their major wildlife maintenance host and *Culicine* mosquitoes for transmission, and they are both associated with severe human disease, as well as fatal infections in horses. The emergence of these two viruses, and their well-established propensity to colonise new areas, make it timely to re-examine their ecology, biology, molecular structure, replication and epidemiology, and these therefore provide the focus of this volume.

Artificial Intelligence in Society Springer Science & Business Media  
*Bark Beetles: Biology and Ecology of Native and Invasive Species* provides a thorough discussion of these economically important pests of coniferous and broadleaf trees and their importance in agriculture. It is the first book in the market solely dedicated to this important group of insects, and contains 15 chapters on natural history and ecology, morphology, taxonomy and phylogenetics, evolution and diversity, population dynamics, resistance, symbiotic associations, natural enemies, climate change, management strategies, economics, and politics, with some chapters exclusively devoted to some of the most economically important bark beetle genera, including *Dendroctonus*, *Ips*, *Tomicus*, *Hypothenemus*, and *Scolytus*. This text is ideal for entomology and forestry courses, and is aimed at scientists, faculty members, forest managers, practitioners of biological control of insect pests, mycologists interested in bark beetle-fungal associations, and students in the disciplines of entomology, ecology, and forestry. Provides the only synthesis of the literature on bark beetles. Features chapters exclusively devoted to some of the most economically important bark beetle genera, such as *Dendroctonus*, *Ips*, *Tomicus*, *Hypothenemus*, and *Scolytus*. Includes copious color illustrations and photographs that further enhance the content.

**Glossary of Abbreviations** Springer

Fluorescence in situ hybridization (FISH) has been developed as a powerful technology which allows direct visualisation or localisation of genomic alterations. The technique has been adopted to a range of applications in both medicine, especially in

the areas of diagnostic cytogenetics, and biology. Topics described in this manual include: FISH on native human tissues, such as blood, bone marrow, epithelial cells, hair root cells, amniotic fluid cells, human sperm cells; FISH on archival human tissues, such as formalin fixed and paraffin embedded tissue sections, cryofixed tissue; simultaneous detection of apoptosis and expression of apoptosis-related genes; comparative genomic hybridization; and special FISH techniques.

*Air Pollution and Health* World Health Organization

Spatial and identity research operates with differentiations and relations. These are particularly useful heuristic tools when examining border regions where social and geopolitical demarcations diverge. Applying this approach, the authors of this volume investigate spatial and identity constructions in cross-border contexts as they appear in everyday, institutional and media practices. The results are discussed with a keen eye for obliquely aligned spaces and identities and relinked to governmental issues of normalization and subjectivation. The studies base upon empirical surveys conducted in Germany, France, Belgium and Luxembourg.

Cytogenomics pacific-credo Publications

Most of the specialists working in this interdisciplinary field of physics, biology, biophysics and medicine are associated with "The International Institute of Biophysics" (IIB), in Neuss, Germany, where basic research and possibilities for applications are coordinated. The growth in this field is indicated by the increase in financial support, interest from the scientific community and frequency of publications. Audience: The scientists of IIB have presented the most essential background and applications of biophotonics in these lecture notes in biophysics, based on the summer school lectures by this group. This book is devoted to questions of elementary biophysics, as well as current developments and applications. It will be of interest to graduate and postgraduate students, life scientists, and the responsible officials of industries and governments looking for non-invasive methods of investigating biological tissues.

*Biologie humaine* IWA Publishing

Urban Drainage: A Multilingual Glossary has been written by research engineers and scientists with substantial experience in the urban drainage field. It provides definitive descriptions of urban drainage terms in English, French, Japanese and German, giving guidance on their appropriate usage and context. The

glossary also contains many diagrams, tables and technical discussions, and is a very practical tool to facilitate international technical communication in the urban drainage field. Containing well over 850 commonly-used terms in urban drainage, all expressed in a user-friendly manner, the book serves as a valuable resource for both practitioner and academic. Topics covered include: urban hydrology/hydraulics sewerage surface water runoff pollution (groundwater and surface) receiving waters ecology ecotoxicology best management practices urban water

resource management Urban Drainage: A Multilingual Glossary represents an initiative of the joint IWA/IAHR Committee on Urban Drainage and has arisen out of the long-standing terminological and tautological difficulties of many terms in common usage within international urban drainage practice. It will be of great use and interest to scientists, engineers and ecologists, professionals and students working in urban hydrology/hydraulics, urban water resource management and regulation, urban planning and ecology.
