[The Roman Festivals of the Period of the Republic](#) BoD - Books on Demand

Egyptologist Gerald Massey challenged readers in A Book of the Beginnings to consider the argument that Egypt was the birthplace of civilization and that the widespread monotheistic vision of man and the metaphysical was, in fact, based on ancient Egyptian mythos. In The Natural Genesis, presented here in an omnibus edition, Massey delivers a sequel, delving deeper into his compelling polemic. In Volume I, he offers a more intellectual, fine-tuned analysis of the development of society out of Egypt. From the simplest signs (numbers, the cross) to the grandest archetypes (darkness, the mother figure), Massey carefully and confidently lays the cultural and psychosocial bricks of evolutionism. Volume II provides detailed discourse on the Egyptian origin of the delicate components of the monotheistic creed. With his agile prose, Massey leads an adventurous examination of the epistemology of astronomy, time, and Christology-and what it all means for human culture. British author GERALD MASSEY (1828-1907) published works of poetry, spiritualism, Shakespearean criticism, and theology, but his best known works are in the realm of Egyptology, including The Book of the Beginnings, The Natural Genesis, and Ancient Egypt: The Light of the World.

"The" Satires of Juvenal,. North-Holland

This meticulously researched compendium provides every aspect of growing, identifying, harvesting, preserving, and using more than 500 species of herbs. Thorough profiles provide a plant's botanical name and family, whether it is an annual or perennial, its height, hardiness, light requirements, water consumption, required soil type, and pH. The often fascinating history of the plant, the chemistry of its essential oils, and its culinary, landscape, and craft uses are also included, as is advice on how to propagate. For the first edition of their work, both authors received The Gertrude B. Foster Award for Excellence in Herbal Literature from the Herb Society of America. This new edition adds important species and includes updated nomenclature.

"Wildlife in a Changing World" presents an analysis of the 2008 IUCN Red List of Threatened Species. Beginning with an explanation of the IUCN Red List as a key conservation tool, it goes on to discuss the state of the world's species and provides the latest information on the patterns of species facing extinction in some of the most important ecosystems in the world, highlighting the reasons behind their declining status. Areas of focus in the report include: freshwater biodiversity, the status of the world's marine species, species susceptibility to climate change impacts, the Mediterranean biodiversity hot spot, and broadening the coverage of biodiversity assessments."

Hemp is enjoying a worldwide resurgence. This book combines a useful review of the hemp pest and disease literature published over the past 50 years, with up-to-date information on modern biological control techniques. Each pest and disease organism is presented in the same format, covering range and economic impact, symptoms, life history, diagnosis, and both new and old techniques for biological control and chemical control. Easy to use keys are included for rapid identification of the most common pests. Introductory chapters describe the general principles of plant protection, requirements for healthy plant growth, and taxonomy of parasites and pathogens.

[Wildlife in a Changing World](#) Timber Press

True bugs (Heteroptera) are a diverse and complex group of plant-feeding and predatory insects important to food production, human health, the global economy and the environment. Within the nearly 43,000 species described around the world, Neotropical true bugs are particularly diverse, and much remains to be discovered about their biology and relations with other species. Inspired by the need for a comprehensive assessment, True Bugs (Heteroptera) of the Neotropics is the most

complete and thorough review ever published. Experts in each of the seven infraorders have drawn together the scattered literature to provide detailed treatments of each major taxon. The most common and important species as well as select lesser known species in each major family are covered, highlighting morphology, classification, biology and ecology. The numerous color illustrations highlight key species and their adaptations, and importance to basic and applied sciences is discussed. Each chapter is based on an up-to-date review of the literature, and with a bibliography of more than 3,000 references, readers are presented with an unprecedented and vital and timely account of the true bugs of the Neotropical Region.

The Torre-Bueno Glossary of Entomology Walter de Gruyter

"An exhaustive dictionary of over 13,000 terms relating to invertebrate zoology, including etymologies, word derivations and taxonomic classification. Entries cover parasitology, nematology, marine invertebrates, insects, and anatomy, biology, and reproductive processes for the following phyla: Acanthocephala, Annelida, Arthropoda, Brachiopoda, Bryozoa, Chaetognatha, Cnidaria, Ctenophora, Echinodermata, Echiura, Entoprocta, Gastrotricha, Gnathostomulida, Kinorhyncha, Loricifera, Mesozoa, Mollusca, Nematoda, Nematomorpha, Nemertea, Onychophora, Pentastoma, Phoronida, Placozoa, Platyhelminthes, Pogonophora, Porifera, Priapulida, Rotifera, Sipuncula, and Tardigrada"--Abstract at <http://digitalcommons.unl.edu/onlinedictinvertzoology/2>.

I welcome the opportunity to have my book translated, because of the great emphasis on two-phase flow and heat transfer in the English-speaking world, as related to research, university education, and industrial practice. The 1988 Springer-Verlag edition of "Warmeübergang beim Kondensieren und beim Sieden" has been enlarged to include additional material on falling film evaporation (Chapter 12) and pressure drop in two-phase flow (Chapter 13). Minor errors in the original text have also been corrected. I would like to express my sincere appreciation to Professor Green, Associate Professor of German at Rensselaer, for his excellent translation and cooperation. My thanks go also to Professor Bergles for his close attention to technical and linguistic details. He carefully read the typescript and made many comments and suggestions that helped to improve the manuscript. I hope that the English edition will meet with a favorable reception and contribute to better understanding and to progress in the field of heat transfer in condensation and boiling. February 1992 K. Stephan Preface to the German-Language Edition This book is a continuation of the series "Heat and Mass Transfer" edited by U. Grigull, in which three volumes have already been published. Its aim is to acquaint students and practicing engineers with heat transfer during condensation and boiling, and is intended primarily for students and engineers in mechanical, chemical, electrical, and industrial processing engineering.

The Tools of Asclepius IUCN

Ongoing landscape transformation worldwide has raised global concerns and there is a need to rethink landscaping to protect the environment. This is especially true for previously developed sites, currently abandoned or underused. Instead of consuming green lands, these derelict landscapes need to be redeveloped and given new life, enabling their transition to an increasingly sustainable urban setting. In this scenario, the present book, considers a set of subjects that highlight the diverse nature of the scientific domains associated with landscape reclamation, emphasizing the need to acknowledge that the contribution of each sustainability dimension is equally important. This will offer complementary development opportunities, while enabling redeveloped landscapes to fulfill multiple functions in an integrated way and underline the relevance of multifunctionality to promote sustainable landscape reclamation, planning, and development.

A Manual of Entomology, CABI

The second edition of The Diversity of Fishes represents a major revision of the world's most widely adopted ichthyology textbook. Expanded and updated, the second edition is illustrated throughout with striking color photographs depicting the spectacular evolutionary adaptations of the most

ecologically and taxonomically diverse vertebrate group. The text incorporates the latest advances in the biology of fishes, covering taxonomy, anatomy, physiology, biogeography, ecology, and behavior. A new chapter on genetics and molecular ecology of fishes has been added, and conservation is emphasized throughout. Hundreds of new and redrawn illustrations augment readable text, and every chapter has been revised to reflect the discoveries and greater understanding achieved during the past decade. Written by a team of internationally-recognized authorities, the first edition of *The Diversity of Fishes* was received with enthusiasm and praise, and incorporated into ichthyology and fish biology classes around the globe, at both undergraduate and postgraduate levels. The second edition is a substantial update of an already classic reference and text. Companion resources site This book is accompanied by a resources site:

Completely revised and updated, *Dermatology* covers all the classical and related fields of dermatology, providing a wealth of information on clinical features, pathophysiology, and differential diagnosis. Over 900 color photographs acquaint the reader with a variety of dermatological diseases. Each chapter contains detailed proposals for comprehensive therapy.

Annotated Checklist of Indian Marine Molluscs: Cephalopoda, Bivalvia and Scaphopoda Conservation International

This is a volume about the life and power of ritual objects in their religious ritual settings. In this Special Issue, we see a wide range of contributions on material culture and ritual practices across religions. By focusing on the dynamic interrelations between objects, ritual, and belief, it explores how religion happens through symbolic materiality. The ritual objects presented in this volume include: masks worn in the Dogon dance; antique ecclesiastical silver objects carried around in festive processions and shown in shrines in the southern Andes; funerary photographs and films functioning as mnemonic objects for grieving children; a dented rock surface perceived to be the god's footprint in the archaic place of pilgrimage, Gaya (India); a recovered manual of rituals (from Xiapu county) for Mani, the founder of Manichaeism, juxtaposed to a Manichaeian painting from southern China; sacred stories and related sacred stones in the Alor-Pantar archipelago, Indonesia; lotus symbolism, indicating immortalizing plants in the mythic traditions of Egypt, the Levant, and Mesopotamia; lavishly illustrated variations of portrayals of Ravana, a Sinhalese god-king-demon; figurines made of cow dung sculptured by rural women in Rajasthan (India); and mythical artifacts called 'Apples of Eden' in a well-known interactive game series.

Handbook of Spices, Seasonings, and Flavorings, Second Edition Golden Age Media

Large Scale Applications of Heat Pumps *Journal of Heat Transfer* Oil - Final Countdown To A Global Crisis And Its Solutions Golden Age Media

In *The Tools of Asclepius* Lawrence Bliquez provides a comprehensive, up-to-date treatment of the surgical instruments and paraphernalia used by Greco-Roman pharmacists, physicians and surgeons.

[Hemp Diseases and Pests](#) Elsevier

An A to Z Catalog of Innovative Spices and Flavorings Designed to be a practical tool for the many diverse professionals who develop and market foods, the *Handbook of Spices, Seasonings, and Flavorings* combines technical information about spices—forms, varieties, properties, applications, and quality specifications — with information about trends, spice history, and the culture behind their cuisines. The book codifies the vast technical and culinary knowledge for the many professionals who develop and market foods. While many reference books on spices include alphabetized descriptions, the similarity between this book and others ends there. More than just a list of spices, this book covers each spice's varieties, forms, and the chemical components that typify its flavor and color. The author includes a description of spice properties, both chemical and

sensory, and the culinary information that will aid in product development. She also explains how each spice is used around the world, lists the popular global spice blends that contain the spice, describes each spice's folklore and traditional medicine usage, and provides translations of each spice's name in global languages. New to this edition is coverage of spice labeling and a chapter on commercial seasoning formulas. Going beyond the scope of most spice books, this reference describes ingredients found among the world's cuisines that are essential in providing flavors, textures, colors, and nutritional value to foods. It explores how these ingredients are commonly used with spices to create authentic or new flavors. The author has created a complete reference book that includes traditionally popular spices and flavorings as well as those that are emerging in the US to create authentic or fusion products. Designed to help you meet the challenges and demands of today's dynamic marketplace, this book is a complete guide to developing and marketing successful products.

The Raja Ampat islands are another example of a highly diverse coral ecosystem under threat. Such regions stand out not only because of their species richness, endemism, and habitat level diversity, but also because of their relatively pristine condition. Yet portions of these coral ecosystems face imminent destruction and degradation because of over-fishing or destructive fishing, pollution, population growth, and the urbanization of coastlines. This rapid assessment catalogs the current biological state of the Raja Ampat islands and assesses potential threats.

Rapid advancement of telecommunications and information technology has created the potential for high-quality expert healthcare to be delivered when and where it is needed. This text charts the development of the telemedicine industry, defines its current scope and reveals the potential of new methodologies. * Explains the main features of telemedicine and telecare * Reviews the technology needed for telemedicine * Describes how to develop, deliver and evaluate telemedicine services * Considers the associated ethical and legal issues * Includes an in-depth survey of the literature with over 300 references to research articles and hyperlinks to associated websites This text provides a good working knowledge of the subject matter. It will be indispensable for all students on courses related to medicine and health care management. It also addresses the strategic, technical and operational issues faced by clinicians and health care managers considering the introduction of telemedicine services offering solutions for a variety of situations.

[Planthoppers](#) Large Scale Applications of Heat Pumps *Journal of Heat Transfer* Oil - Final Countdown To A Global Crisis And Its Solutions

Latin is one of two acceptable languages for describing new plants, and taxonomists must be able to translate earlier texts in Latin. Providing a simple explanation of Latin grammar along with an in-depth vocabulary, this is an indispensable guide for systematic botanists worldwide. All relevant parts of speech are discussed, with accompanying examples as well as worked exercises for translating diagnoses and descriptions to and from Latin. Guidelines for forming specific epithets are also included. The authors cross-reference their grammar to Stearn's *Botanical Latin* and to articles in the *International Code of Nomenclature for Algae, Fungi and Plants*. The comprehensive vocabulary is enhanced with terms from recent glossaries for non-flowering plants - lichens, mosses, algae, fungi and ferns - making this an ideal resource for anyone looking to hone their understanding of Latin grammar and to translate botanical texts from the past 300 years.
