 Drawing on unprecedented access to the video archives of B'Tselem, an Israeli NGO that distributes cameras to Palestinians living in the West Bank, East Jerusalem, and the Gaza Strip, Liat Berdugo lays out an argument for a visual studies approach to videographic evidence in Israel/Palestine. Using video stills as core material, it discusses the politics of videographic evidence in Israel/Palestine by demonstrating that the conflict is one that has produced an inequality of visual rights. The book highlights visual surveillance and counter surveillance at the citizen level, how Palestinians originally filmed to "shoot back" at Israelis, who were armed with shooting power via weapons as the occupying force. It also traces how Israeli private citizens began filming back at Palestinians with their own cameras, including personal cell phone cameras, thus creating a simultaneous, echoing counter surveillance. Complicating the notion that visual evidence alone can secure justice, the *Weaponized Camera in The Middle East*

asks how what is seen, but also who is seeing, affects how conflicts are visually recorded. Drawing on over 5,000 hours of footage, only a fraction of which is easily accessible to the public domain, this book offers a unique perspective on the strategies and battlegrounds of the Israel/Palestine conflict.

In this eye-opening critique, Ronald Kramer and James C. Oleson interrogate the promises of crime science and target our misplaced faith in technology as the solution to criminality. This book deconstructs crime science's most prominent manifestations—biological, actuarial, security, and environmental sciences. Rather than holding the technological keys to crime's resolution, crime sciences inscribe criminality on particular bodies and constitute a primary resource for the conceptualization of crime that many societies take for granted. Crime science may strive to reduce crime, but in doing so, it reproduces power asymmetries, creates profit motives, undermines important legal concepts, instantiates questionable practices, and forces open new vistas of deviant activity.

"I should say that one of the inducements to making these inquiries into personal identification has been to discover independent features suitable for hereditary investigation." -Sir Francis Galton, "Personal Identification and Description" (1889) In *Finger Prints* (1907), Sir Francis Galton described the research he did related to the use of fingerprints for identification. Through this work, he validated a theory first proposed by Sir William Herschel and gave the use of fingerprinting a scientific validity that laid the groundwork for its use in criminal investigations. This edition of his book contains minor revisions the author made to the original 1883 publication.

Evaluation Methodology Basics introduces evaluation by focusing on the main kinds of 'big picture' questions that evaluations usually need to answer, and how the nature of such questions are linked to evaluation methodology choices. The author: shows how to identify the right criteria for your evaluation; discusses how to objectively figure out which criteria are more important than the others; and, delves into how to combine a mix of qualitative and quantitative data with 'relevant values' (such as needs) to draw explicitly evaluative conclusions.
