Optimize your dynamic spectrum access approach using the latest applications and techniques  
 Dynamic Spectrum Access Decisions: Local, Distributed, Centralized and Hybrid Designs prepares engineers to build optimum communications systems by describing at the outset what type of spectrum sensing capabilities are needed. Meant for anyone who has a basic understanding of wireless communications and networks and an interest in the physical and MAC layers of communication systems, this book has a tremendous range of civilian and military applications. Dynamic Spectrum Access Decisions provides fulsome discussions of cognitive radios and networks, but also DSA technologies that operate outside the context of cognitive radios. DSA has applications in: Licensed spectrum bands Unlicensed spectrum bands Civilian communications Military communications Consisting of a set of techniques derived from network information theory

and game theory, DSA improves the performance of communications networks. This book addresses advanced topics in this area and assumes basic knowledge of wireless communications. *Commanders and Command in the Roman Republic and Early Empire* Lulu.com  
 The U.S. military has been continuously engaged in foreign conflicts for over two decades. The strains that these deployments, the associated increases in operational tempo, and the general challenges of military life affect not only service members but also the people who depend on them and who support them as they support the nation "their families. Family members provide support to service members while they serve or when they have difficulties; family problems can interfere with the ability of service members to deploy or remain in theater; and family members are central influences on whether members continue to serve. In addition, rising family diversity and complexity will likely increase the difficulty of creating military policies, programs and practices that adequately support families in the performance of military duties. Strengthening the Military Family Readiness System for a Changing American Society examines the challenges and opportunities facing military families and what is known about effective strategies for supporting

and protecting military children and families, as well as lessons to be learned from these experiences. This report offers recommendations regarding what is needed to strengthen the support system for military families.

Selenium (Se) pollution has led to several cases of severe aquatic ecosystem deterioration due to Se poisoning caused by bioaccumulation over time. However, the removal of selenate (SeO4<sup>2-</sup>) from wastewater streams with co-contaminants has been largely considered as a black box in anaerobic biological systems using mixed consortia. This research aimed at addressing the effect of wastewater characteristics, i.e. co-contaminants such as nitrate (NO<sub>3</sub><sup>-</sup>) and sulfate (SO<sub>4</sub><sup>2-</sup>), heavy metals and pH, on the biological reduction of SeO<sub>4</sub><sup>2-</sup> and evaluating process integration for Se-laden wastewater treatment with co-contaminants. This study demonstrated that the presence of co-contaminants can actually be beneficial for Se removal provided that the concentrations are carefully monitored and appropriate operating conditions and process configurations are used. The Se removal (total Se and SeO<sub>4</sub><sup>2-</sup>) efficiency increased by ~30% in the presence of NO<sub>3</sub><sup>-</sup> and/or

SO42- compared to systems with SeO42- alone. Additionally, an integrated process of an ion exchange (IX) column and bioreactors showed improved overall removal capacity for SO42- and total Se. The knowledge and information gained from this research can help in the advancement and application of biological processes, i.e. predicting of reactor performance, solving specific design or practical problems and implementing novel treatment techniques for Se-laden mine wastewater.

One of the hallmarks of a true profession is its ability to assess and regulate itself, especially with respect to adherence to its foundational ethos. Such self-examination is difficult and often causes discomfort within the profession. Nonetheless, it is absolutely necessary to enable members of the profession to render the service for which the profession exists. U.S. military professionals have never shied away from this responsibility, and they do not today, as evidenced by this riveting monograph. Discussing dishonesty in the Army profession is a topic that will undoubtedly make many readers uneasy. It is, however, a concern that must be addressed to better the Army profession. Through extensive discussions with officers and thorough and sound analysis, Drs. Leonard Wong and Stephen Gerras make a compelling argument for the Army to introspectively examine how it might be inadvertently encouraging the very behavior it deems unacceptable.

Disordered Violence looks at how gender, race, and heteronormative expectations of public life shape Western understandings of terrorism as irrational, immoral and illegitimate. Caron Gentry examines the profiles of 8 well-known terrorist actors, including Andreas Baader, Bernardine Dohrn, Leila Khaled, Dhanu, Anders Breivik, Nidal Hasan and Aafia Siddiqui. Gentry looks for gendered, racial, and sexualised assumptions in how their stories are told. Additionally, she interrogates how the current counterterrorism focus upon radicalisation is another way of constructing terrorists outside of the Western ideal. Finally, the book argues that mainstream Terrorism Studies must contend with the growing misogynist and racialised violence against women.

This book explains how colonial legacies and the postcolonial state of Pakistan negatively influenced the socio-political and cultural dynamics and the security situation in Pakistan's Pashtun 'tribal' areas, formerly known as the Federally Administered Tribal Areas (FATA). It offers a local perspective on peace and conflict resolution in Pakistan's Pashtun 'tribal' region. Discussing the history and background of the former-FATA region, the role of Pashtun conflict resolution mechanism of Jirga, and the persistence of colonial-era Frontier Crimes Regulations (FCR) in the region, the author argues that the persistence of colonial legacies in the Pashtun 'tribal' areas, especially the FCR, coupled with the overarching influence of the military on security policy has negatively impacted the security situation in the region. By focusing on the Jirga and Jirga-based Lashkars (or Pashtun militias), the book demonstrates how Pashtuns have engaged in their own initiatives to handle the rise of militancy in their region. Moreover, the book contends that, even after the introduction of constitutional reforms and FATA's merger with the Khyber Pakhtunkhwa province, little has changed in the region, especially regarding the treatment of 'tribal' Pashtuns as equal citizens of Pakistan. This book explains, in detail, why indigenous methods of peace and conflict resolution, such as the Jirga, could play "some" role towards long-term peace in the South Asian region. Historically and contextually informed with a focus on North-West Pakistan, this book will be of interest to academics researching South Asian Studies, International Relations, Peace and Conflict Studies, terrorism, and traditional justice and restorative forms of peace-making.

This book focuses on an organization, the U.S. Army Nurse Corps, which the author has been privileged to be affiliated with – in one way or another – for the greatest part of her adult life. As an active duty officer, the author had first-hand knowledge about the Army Nurse Corps inner workings and spent the last years of her Army career (from 1992) researching and writing the Corps history. One of her goals in researching and writing this history was to intrigue and provide a sense of gratification for the reader. After the conclusion of the Vietnam War, several wide-ranging and significant changes exerted myriad effects on the Army Nurse Corps. The most influential of these phenomena included the dismantling of the Selective Service System, the reorganization of the Army, the launch of the Health Services Command (HSC), the opening of the Academy of Health Sciences, the transformation of the Office of the Army Surgeon General, the inauguration of improvements in the Army Reserve and National Guard, and the evolution in the roles and status of women.

This book offers a detailed examination of the counter-insurgency operations undertaken by the Nigerian military against Boko Haram between 2011 and 2017. Based on extensive fieldwork conducted with military units in Nigeria, Counter-Insurgency in Nigeria has two main aims. First, it seeks to provide an understanding of the Nigerian military's internal role – a role that today, as a result of internal threats, pivots towards counter-insurgency. The book illustrates how

organizational culture, historical experience, institutions, and doctrine, are critical to understanding the Nigerian military and its attitudes and actions against the threat of civil disobedience, today and in the past. The second aim of the book is to examine the Nigerian military campaign against Boko Haram insurgents – specifically, plans and operations between June 2011 and April 2017. Within this second theme, emphasis is placed on the idea of battlefield innovation and the reorganization within the Nigerian military since 2013, as the Nigerian Army and Air Force recalibrated themselves for COIN warfare. A certain mystique has surrounded the technicalities of COIN operations by the Army against Boko Haram, and this book aims to disperse that veil of secrecy. Furthermore, the work's analysis of the air force's role in counter-insurgency is unprecedented within the literature on military warfare in Nigeria. This book will be of great interest to students of military studies, counter-insurgency, counter-terrorism, African politics and security studies in general.

China's People's Liberation Army (PLA) has embarked on its most wide-ranging and ambitious restructuring since 1949, including major changes to most of its key organizations. The restructuring reflects the desire to strengthen PLA joint operation capabilities- on land, sea, in the air, and in the space and cyber domains. The reforms could result in a more adept joint warfighting force, though the PLA will continue to face a number of key hurdles to effective joint operations. Several potential actions would indicate that the PLA is overcoming obstacles to a stronger joint operations capability. The reforms are also intended to increase Chairman Xi Jinping's control over the PLA and to reinvigorate Chinese Communist Party (CCP) organs within the military. Xi Jinping's ability to push through reforms indicates that he has more authority over the PLA than his recent predecessors. The restructuring could create new opportunities for U.S.-China military contacts. *Design, User Experience, and Usability: Technological Contexts* National Academies Press Military technology is highly advanced in terms of technology being used in the field, computer applications, artificial intelligence, and software applications. These high-performance technologies range from weapons to communications technology to automation in vehicles and weaponry. These technologies must be both secure and reliable in harsh environments. Research is being focused specifically on that, including how military and defense applications operate, what modern technologies are being used, and the ethics surrounding these applications. A holistic view of these applications is necessary for both understanding current military tactics and tools along with the future applications. The Research Anthology on Military and Defense Applications, Utilization, Education, and Ethics focuses specifically on military and defense operations, expenditure, technologies, and tools, and the ethics surrounding technologies like weaponry and artificial intelligence in the military. The chapters cover a wide and diverse range of military and defense applications while providing crucial information on the functions, security, and reliability of these technologies. Beyond an understanding of the applications themselves, this book also focuses on military education surrounding these technologies and the ethics of usage to provide a well-rounded understanding of research in the field. This book is ideal for military consultants, military personnel, defense agencies, national security agencies, government officials, defense personnel, policymakers, military educators and trainers, stakeholders, practitioners, researchers, academicians, and students interested in the latest research in military and defense applications.

Since the previous National Military Strategy (2011), global disorder has significantly increased while some of our comparative military advantage has begun to erode. We now face multiple,

simultaneous security challenges from traditional state actors and transregional networks of sub-state groups -- all taking advantage of rapid technological change. This 2015 National Military Strategy describes how the U.S. will employ our military forces to protect and advance our national interests. We must be able to rapidly adapt to new threats while maintaining comparative advantage over traditional ones. Future conflicts will come more rapidly, last longer, and take place on a much more technically challenging battlefield. Success will increasingly depend on how well our military instrument can support the other instruments of power and enable our network of allies and partners. Figures. This is a print on demand report.

Americans eat more processed foods than anyone else in the world. We also spend more on military research. These two seemingly unrelated facts are inextricably linked. If you ever wondered how ready-to-eat foods infiltrated your kitchen, you'll love this entertaining romp through the secret military history of practically everything you buy at the supermarket. In a nondescript Boston suburb, in a handful of low buildings buffered by trees and a lake, a group of men and women spend their days researching, testing, tasting, and producing the foods that form the bedrock of the American diet. If you stumbled into the facility, you might think the technicians dressed in lab coats and the shiny kitchen equipment belonged to one of the giant food conglomerates responsible for your favorite brand of frozen pizza or microwavable breakfast burritos. So you'd be surprised to learn that you've just entered the U.S. Army Natick Soldier Systems Center, ground zero for the processed food industry. Ever since Napoleon, armies have sought better ways to preserve, store, and transport food for battle. As part of this quest, although most people don't realize it, the U.S. military spearheaded the invention of energy bars, restructured meat, extended-life bread, instant coffee, and much more. But there's been an insidious mission creep: because the military enlisted industry—huge corporations such as ADM,

ConAgra, General Mills, Hershey, Hormel, Mars, Nabisco, Reynolds, Smithfield, Swift, Tyson, and Unilever—to help develop and manufacture food for soldiers on the front line, over the years combat rations, or the key technologies used in engineering them, have ended up dominating grocery store shelves and refrigerator cases. TV dinners, the cheese powder in snack foods, cling wrap . . . The list is almost endless. Now food writer Anastacia Marx de Salcedo scrutinizes the world of processed food and its long relationship with the military—unveiling the twists, turns, successes, failures, and products that have found their way from the armed forces' and contractors' laboratories into our kitchens. In developing these rations, the army was looking for some of the very same qualities as we do in our hectic, fast-paced twenty-first-century lives: portability, ease of preparation, extended shelf life at room temperature, affordability, and appeal to even the least adventurous eaters. In other words, the military has us chowing down like special ops. What is the effect of such a diet, eaten—as it is by soldiers and most consumers—day in and day out, year after year? We don't really know. We're the guinea pigs in a giant public health experiment, one in which science and technology, at the beck and call of the military, have taken over our kitchens.

This report examines many of the weaknesses in China's People's Liberation Army (PLA) human capital and organization realms, its combat capabilities across various domains, and China's defense research and industrial complex. Furthermore, the report analyzes how these weaknesses affect the PLA's performance of missions tasked by Beijing. China's military isn't ready to win wars despite spending heavily to modernize. The People's Liberation Army suffers from 'potentially serious weaknesses' that could limit its ability to conduct the operations required to fight and win future conflicts. "Although the PLA's capabilities have increased dramatically, its remaining

weaknesses increase the risk of failure to successfully perform the missions the Chinese Communist Party leaders may task it to perform," the report says. It cited Taiwan contingencies, maritime claim missions, protecting sea lines of communications and some non-war military operations. The report looks at two critical shortcomings: institutional and combat capabilities. On institutional issues, the PLA faces shortcomings regarding outdated command structures, quality of personnel, professionalism and corruption. Combat weaknesses include logistical, insufficient strategic airlift capabilities, limited numbers of special-mission aircraft, and deficiencies in fleet air defense and anti-submarine warfare.
