This volume examines the ways in which the media, including film, television, social media, and gaming, has constructed and sustained a narrative of white supremacy that has entered mainstream American discourse. With chapters by today's preeminent critical race scholars, the book looks in particular at the ways media institutions have circulated white supremacist ideology across a wide range of platforms and texts that have had significant impact on shaping our current polarized and racialized social and political landscape. Systematically scrutinizing every media platform, this volume provides readers with an understanding of the ways in which media has provided institutional support for white supremacist ideology, and presents them with the means to examine and analyze the persistence of these narratives within our racial discourse, thus offering the necessary knowledge to challenge and transform these racially divisive and destructive narratives. *White Supremacy and the American Media* will be of interest not only to scholars working in critical race studies and popular culture in the United States, but also to those working in the fields of Film and Television Studies, Sociology, Geography, Art History, Communication and Media Studies, Cultural Studies, American Studies, Popular Culture, and Media Studies.

A breathtakingly simple poem of universal experience shows us the transformative power of

collective action. "Together offers a vision of the world we want for our children, one in which all living things flourish, our communities thrive, and justice prevails." --Ibram X. Kendi, author of *Antiracist Baby* In *Together*, social justice kids book pioneer Innosanto Nagara teams up with poet and activist Mona Damluji for a stunningly tender and pitch-perfect visual feast that juxtaposes individual action with the power of people acting together. Each of the ten free-verse couplets in the poem is spread across four pages of imagery, to make a unique and different kind of board book for young kids to discover with their families. The first illustrated book in which Nagara applies his extraordinary visual imagination to words not his own, *Together* is simplicity itself--a poem about the transformational change that happens when people stop acting alone and start doing things together. *Together* is Nagara's third board book, following the immensely popular social justice board books *A is for Activist* and *Counting on Community*.

"Increasingly, across the country, school, district, and postsecondary educators are exploring new avenues for incorporating the visual and performing arts into the core curriculum through interdisciplinary learning called arts integration. Arts Integration is a pedagogy whereby students

engage in learning subject matter in and through the arts. The Kennedy Center in Washington D.C., a nationally recognized leader for professional artists and arts education defines arts integration as "an approach to teaching in which students construct and demonstrate understanding through an art form. "Teachers engaged in an arts integrated pedagogy may design lessons through which students act out the lifecycle of a butterfly, dance the structure of DNA, illustrate main ideas in storybooks or rap mathematical formulas and concepts"--

Biometric recognition, or simply biometrics, is the science of establishing the identity of a person based on physical or behavioral attributes. It is a rapidly evolving field with applications ranging from securely accessing one's computer to gaining entry into a country. While the deployment of large-scale biometric systems in both commercial and government applications has increased the public awareness of this technology, "Introduction to Biometrics" is the first textbook to introduce the fundamentals of Biometrics to undergraduate/graduate students. The three commonly used modalities in the biometrics field, namely, fingerprint, face, and iris are covered in detail in this book. Few other modalities like hand geometry, ear, and gait are also discussed briefly along with advanced topics such as multibiometric systems and security of biometric systems. Exercises for each chapter will be available on the book website to help students gain a better understanding of the topics and obtain practical experience in designing computer programs for biometric applications. These can be found at: <http://www.csee.wvu.edu/~ross/BiometricsTextBook/>. Designed for undergraduate and graduate students in computer science and electrical engineering, "Introduction to Biometrics" is also suitable for researchers and biometric and computer security professionals.

The field of design and health, formerly known as the domain of healthcare design professionals, has now reached a turning point with the proliferation of a plethora of non-invasive wearable technologies, to provide the objective and near-real-time measurement of the impact of many features of the built environment on aspects of health, wellbeing and performance. In turn, new materials and the Internet of Things are allowing the development of smart buildings, which can interact with occupants to optimize their health, wellbeing, performance and overall experience. Companies that have previously focused on positioning themselves as "green" are now turning to positioning themselves in the marketplace as both green and healthy. This Special Issue will include articles that address new cutting edge technologies and materials at the interface between design and health, and review some of the latest findings related to studies which use these technologies.

This SI will also suggest exciting future directions for the field. It will include articles which focus on the objective data gathered to document the effects of the built environment on health. Importantly, it will focus on the use of innovative methods of measurement, such as state-of-the-art wearable and environmental sensors, quantifying some aspects of health, such as stress and relaxation responses, activity, posture, sleep quality, cognitive performance and wellbeing outcomes. It will also examine the impacts of different elements of the built environment on these health and wellbeing outcomes. The published articles will focus on the design interventions informed by these measurements, along with innovative integrated building materials that can shape the design of built environments for better health, productivity, and performance. It will also address the return on investment (ROI) of such design interventions. This Special Issue will provide both the foundational knowledge and fundamentals for characterizing human health and wellbeing in the built environment, as well as the emerging trends and design methods for innovations in this field.
