Mechanical Technology has long been the most comprehensive text on mechanical technology for students of mechanical engineering at a pre-university and technician level. Within a

single book, full coverage is provided of stress analysis, dynamics, thermodynamics, and fluid mechanics. This complete coverage is achieved without sacrificing depth of treatment, and is without equal in its class. The new edition has been revised in line with the new Engineering syllabus. In particular the section on heat transfer has been expanded. However, the book remains ideal for more traditional courses, and has been designed to cover a wide range of units drafted by colleges and universities. The breadth of coverage also makes Mechanical Technology an ideal text for first year degree modules. Complete subject coverage Suitable for numerous courses / syllabuses Accessible price

Transforming an actor into a character for film or theater takes a great deal of skill, prowess, and creativity, and in this new edition, author Todd Debrececi empowers you with just those qualities. From his years of film, TV, and theatrical experience, he shows you tips and techniques that will have you applying your own makeup effects like a pro in no time. Along with walking you through genre-specific considerations (horror, fantasy, sci-fi, and so on) Todd also teaches you about the gear you will need, how to maintain your kit, how to take care of the actor's skin, how to airbrush properly when HD is involved, and so much more. Learn how to sculpt and mold your own makeup prosthetics, with a focus on how human anatomy relates to sculpture, to create the most realistic effects. Recipes scattered throughout the book show you exactly what you need and how to use it, helping you to create the best SFX makeup applications. Case studies feature some of the world's top makeup effects artists including Steve Wang, Thom Flouts, Ve Neill, Neill Gorton, Greg Nicotero, Kazuhiro Tsuji, Jordu Schell, Howard Berger, Matthew Mungle, Christien Tinsely, Vittorio Sodano, and Tami Lane. Special Makeup Effects for Stage and Screen Taylor & Francis
 Problems in Mechanical Technology covers the subject of mechanical technology in the first year of the Higher National Certificate Course in Engineering. It contains 13 chapters that deal with topics such as stress and strain; shearing forces and bending moments; combined bending and direct stress; deflection of beams due to bending; strain energy; and relative velocity. Also discussed are the dynamics of a rigid body; free vibrations; flow of liquids; and thermodynamic systems. A wide selection of fully-worked examples is provided along with unworked problems with answers through which the student may work in his own time. Although intended for Higher National Certificate students, the book will also be of value in the early years of a Higher National Diploma Course and for those studying for the Part I Examination of the Council of Engineering Institutions. Equally it will be suitable for the new Higher Certificate and Higher Diploma courses to be introduced by the

Technical Education Council.

Armor plays a significant role in the protection of warriors. During the course of history, the introduction of new materials and improvements in the materials already used to construct armor has led to better protection and a reduction in the weight of the armor. But even with such advances in materials, the weight of the armor required to manage threats of ever-increasing destructive capability presents a huge challenge. Opportunities in Protection Materials Science and Technology for Future Army Applications explores the current theoretical and experimental understanding of the key issues surrounding protection materials, identifies the major challenges and technical gaps for developing the future generation of lightweight protection materials, and recommends a path forward for their development. It examines multiscale shockwave energy transfer mechanisms and experimental approaches for their characterization over short timescales, as well as multiscale modeling techniques to predict mechanisms for dissipating energy. The report also considers exemplary threats and design philosophy for the three key applications of armor systems: (1) personnel protection, including body armor and helmets, (2) vehicle armor, and (3) transparent armor. Opportunities in Protection Materials Science and Technology for Future Army Applications recommends that the

Department of Defense (DoD) establish a defense initiative for protection materials by design (PMD), with associated funding lines for basic and applied research. The PMD initiative should include a combination of computational, experimental, and materials testing, characterization, and processing research conducted by government, industry, and academia.
