*Drawing of the Hand* Courier Dover Publications

Arthur Rackham was a Victorian born illustrator and artist who influenced much of the book and commercial illustration of the first half of the 20th Century. The impish detail of his hundreds of drawings brought humour and dark detail to the fairy stories and classic tales which were popular at the time, from Washington Irving to the Brothers Grimm, Peter Pan to his exquisite work on the Alice in Wonderland. His water-colour work, and the graceful power of his ink and line work influenced the Golden Age illustrators of the 1920s, through to the pulps of *Weird Tales*, and the comic books of today. *Arthur Rackham: Masterpieces of Art* is a celebration of this industrious and lively artist.

**An Edmund Dulac Treasury** Courier Corporation

This pioneering book presents the basic theory, experimental methods, experimental results and solution of boundary value problems in a readable, useful way to designers as well as research workers and students. The mathematical background required has been kept to a minimum and supplemented by explanations where it has been necessary to introduce specialized mathematics. Also, appendices have been included to provide sufficient background in Laplace transforms and in step functions. Chapters 1 and 2 contain an introduction and historic review of creep. As an aid to the reader a background on stress, strain, and stress analysis is provided in Chapters 3 and 4, an introduction to linear viscoelasticity is found in Chapter 5 and linear viscoelastic stress analysis in Chapter 6. In the next six chapters the multiple integral representation of nonlinear creep and relaxation, and simplifications to single integral forms and incompressibility, are examined at length. After a consideration of other representations, general relations are derived, then expanded to components of stress or strain for special cases. Both constant stress (or strain) and variable states are described, together with methods of determining material constants. Conversion from creep to relaxation, effects of temperature and stress analysis problems in nonlinear materials are also treated here. Finally, Chapter 13 discusses experimental methods for creep and stress relaxation under combined stress. This chapter considers especially those experimental problems which must be solved properly when reliable experimental results of high precision are required. Six appendices present the necessary mathematical background, conversion tables, and more rigorous derivations than employed in the text. An extensive updated bibliography completes the book.

**The Complete Book of Hand Shadows** Read Books Ltd

Rooted in tales both ancient and modern, these vibrant images date from the early twentieth

century's Golden Age of Illustration. Edmund Dulac, a prominent artist of the period, created them for books published between 1905 and 1928. Their moods range from the shadowy foreboding of Jane Eyre to the venturesome spirits of Treasure Island and the lighthearted fantasies of A Fairy Garland. Other featured titles include Shakespeare's The Tempest, The Arabian Nights, The Rubáiyát of Omar Khayyam, and the fairy tales of Hans Christian Andersen. French-born Edmund Dulac arrived in London in 1904, when new advances in the printing process kindled a rage for picture books. Dulac's imaginative powers and technical skills assured the popularity of his book illustrations, many of which were sold separately as fine art paintings. After World War I, when the appetite for deluxe volumes waned, the artist turned his talents in many new directions, including portraiture, theatrical costume and set design, newspaper caricature, and stamp design. This retrospective of his early works is the only such anthology available, offering a singular tribute to an artist from a halcyon era of art inspired by literature.
