Career Development and Counseling Passbooks

This book considers the origins, performance and diffusion of national immigration policies targeting highly skilled immigrants. Unlike asylum seekers and immigrants admitted under family reunification streams, highly skilled immigrants are typically cast as “wanted and welcome” as a consequence of their potential economic contribution to the receiving society and putative assimilability. Testing the degree to which this assumption holds is the principle aim of this book. In contrast to publications which see highly skilled immigration as functional response to labor market needs, the book probes the political and sociological

dimensions of policy, drawing on contributions from an international group of established and new scholars from the fields of history, law, political science, sociology, and public policy. The book is organized into four parts. Part I probes the origins of post-WWII immigration policies in Canada, Australia, and the United States. Part II analyzes recent debates on highly skilled immigration policy in the United States, whose origins go back to the 1965 Act by Congress which favored family reunification over skilled immigration. Part III considers the degree to which highly skilled immigrants are welcome, by focusing on the integration trajectories of foreign trained professionals in Canada. Paradoxically, just as Canada has succeeded in orienting its admissions system more explicitly toward privileging highly educated and skilled professionals,

highly skilled immigrants have experienced worsening economic outcomes as reflected in rates of unemployment and falling earnings. Part IV considers the internationalization of highly skilled immigration policies, focusing on Europe's most important immigration countries, Germany and Britain. As is true in Canada, the labor market outcomes for highly skilled immigrants in Europe are disappointing, and the final chapter discusses why this is the case and what might be done to improve matters. Given its combination of cross-disciplinary insights, cross-national comparisons, and empirical richness, the book will be of interest to both scholars and policymakers concerned with immigration policy.

Robbins and Cotran Review of Pathology CRC Press

Practising fundamental patient care skills and techniques is essential to the development of trainees' wider competencies in all medical specialties. After the success of simulation learning techniques used in other industries, such as aviation, this approach has been adopted into medical education. This book assists novice and experienced teachers in each of these fields to develop a teaching framework that incorporates simulation. The *Manual of Simulation in Healthcare, Second Edition* is fully revised and updated. New material includes a greater emphasis on patient safety, interprofessional education, and a more descriptive illustration of simulation in the areas of education, acute care medicine, and aviation. Divided into three sections, it ranges from the logistics of establishing a simulation and skills centre and the inherent problems with funding, equipment, staffing, and course development to the considerations for healthcare-centred simulation within medical education and the

steps required to develop courses that comply with 'best practice' in medical education. Providing an in-depth understanding of how medical educators can best incorporate simulation teaching methodologies into their curricula, this book is an invaluable resource to teachers across all medical specialties.

Inpatient Obstetric Nursing McGill-Queen's Press - MQUP

Presenting field work conducted by fourteen Canadian and Sudanese-born Canadian researchers between 2003 and 2011, *Canada in Sudan, Sudan in Canada* explores salient and timely issues faced by both countries. Sudanese immigration to Canada and the transnational ties between the two countries are illuminated in the context of various case studies. Tensions, both social and political, are discussed through the recent secession of South Sudan, the Darfur conflict, and the rise of Islamic fundamentalism. The authors also broach the reconstruction efforts in education and health initiatives, transnationalism from below, and Canada's role in conflict resolution in Sudan. Using qualitative and quantitative research methods that include interviews, surveys, participant observations, discourse analyses, and document analyses, researchers from a wide range of disciplinary approaches - sociology, anthropology, political science, social work, and health studies - reveal important conceptual and empirical perspectives about the processes of inclusion and exclusion. At a time when the Sudanese diaspora in Canada is growing and the conflict in Sudan has become a preoccupation of the international community, *Canada in Sudan, Sudan in Canada* reveals the root causes of conflict in Sudan and identifies measures to foster peace, stability, and development. Contributors include John Clayton (Samaritan's Purse Canada in

Calgary), Rod Crutcher (University of Calgary), Dalal Daoud (PhD student, Queens University), Allison Dennis (University of Calgary), Martha Fanjoy (University of Calgary), Juli Finlay (University of Calgary), Amal Madibbo (University of Calgary), Susan McGrath (York University), Ruth Parent (University of Calgary), Shelley Ross (University of Alberta), Scott Shannon (University of Calgary), Ali Kamal, Ashley Soleski, and Daniel Madit Thon Duop (IMA World Health).

Practical Guide to Medical Student Assessment Lippincott Williams & Wilkins

Clinical reasoning is an essential non-negotiable element for all health professionals. The ability of the health professional to demonstrate professional competence, compassion, and accountability depend on a foundation of sound clinical reasoning. The clinical reasoning process needs to bring together knowledge, experience, and understanding of people, the environment, and organizations along with a strong moral compass in making sound decisions and taking necessary actions. While clinical reasoning and the role of mentors has been a focus of the continued growth and development of residency programs in physical therapy, there is a critical need to have a broader, in-depth look at how educators across academic and clinical settings intentionally facilitate the development of clinical reasoning skills across one's career. *Clinical Reasoning and Decision Making in Physical Therapy: Facilitation, Assessment, and Implementation* fills this need by providing a comprehensive and in-depth focus on development of the patient-client management skills of clinical reasoning and clinical decision-making. It takes into account teaching and learning strategies,

assessment, and technological applications across the continuum from novice to residents/fellows-in-training, along with academic and clinical faculty for both entry-level and specialist practice. Drs. Gina Maria Musolino and Gail Jensen have designed this comprehensive resource with contributions from professional colleagues. The text centers on life-long learning by encouraging the development of clinical reasoning abilities from professional education through residency education. The aim and scope of the text is directed for physical therapy education, to enhance clinical reasoning and clinical decision-making for developing professionals and post-professionals in both clinical and academic realms, and for the development of clinical and academic faculty. *Clinical Reasoning and Decision Making in Physical Therapy* uniquely offers both evidence-based approaches and pragmatic consultation from award-winning authors with direct practice experiences developing and implementing clinical reasoning/clinical decision-making in practice applications for teaching students, residents, patients, and clinical/academic faculty in classrooms, clinics, and through simulation and telehealth. *Clinical Reasoning and Decision Making in Physical Therapy* is the first of its kind to address this foundational element for practice that is key for real-world practice and continuing competence as a health care professional. Physical therapy and physical therapist assistant students, faculty, and clinicians will find this to be an invaluable resource to enhance their clinical reasoning and decision making abilities.

Comprehensive Healthcare Simulation: Implementing Best Practices in Standardized Patient Methodology John Wiley & Sons
This text defines and conceptualizes the field of family medicine.

The first edition was widely acclaimed for its originality, depth of analysis and elegant style. The book has now been extensively revised. Much new material has been added on the patient-centered clinical method, illness narratives, the biological basis of family medicine, health promotion, the concept of risk, and the contribution of evidence-based medicine. A new chapter on alternative (complementary) medicine fills the need for reliable information on this topic.

Annals World Scientific

Created in partnership with the Association for the Study of Medical Education (ASME), this completely revised and updated new edition of *Understanding Medical Education* synthesizes the latest knowledge, evidence and best practice across the continuum of medical education. Written and edited by an international team, this latest edition continues to cover a wide range of subject matter within five broad areas – Foundations, Teaching and Learning, Assessment and Selection, Research and Evaluation, and Faculty and Learners – as well as featuring a wealth of new material, including new chapters on the science of learning, knowledge synthesis, and learner support and well-being. The third edition of *Understanding Medical Education*: Provides a comprehensive and authoritative resource summarizing the theoretical and academic bases to modern medical education practice Meets the needs of all newcomers to medical education whether undergraduate or postgraduate, including those studying at certificate, diploma or masters level Offers a global perspective on medical education from leading experts from across the world Providing practical guidance and exploring medical education in all its diversity, *Understanding*

Medical Education continues to be an essential resource for both established educators and all those new to the field.

The one resource you absolutely need for the MCCQE Part II. Up to date with the MCC's 2018 exam revisions. Prepare to ace the Medical Council of Canada's clinical skills exam, the MCCQE Part II. This is the most complete study guide available. Strategies for the MCCQE Part II offers a strategic, efficient, and high-yield approach to the exam, covering every one of the clinical presentations listed by the MCC, and taking into account the likely scenarios you'll encounter. Strategies breaks down each clinical presentation into three sections: - MCC particular objective(s): For each clinical presentation, Strategies outlines the focus set by the MCC. - MCC differential diagnosis with added evidence: Strategies unpacks the common causal conditions listed by the MCC for each clinical presentation. - Strategy for patient encounter: Strategies breaks down in detail the tasks most likely to be required during the patient encounter, including history taking, physical exam, investigations, and management. Strategies also helps you avoid common exam errors identified by the MCC: it alerts you when clinical presentations may involve emergency care, it models open-ended questions for history taking, it clarifies diagnostic goals for history taking and physical exams, and it offers tips for appropriate patient counselling. Strategies for the MCCQE Part II takes the stress out of studying by organizing the information you need to succeed on this crucial exam.

Before Larten Crepsley was a vampire general... Before he was Darren Shan's master... Before the War of Scars... Larten Crepsley was a teenager. And he was sick of the pomp and circumstance of fusty old vampires telling him what to do. Taking off on his own with his blood brother, Wester, Larten takes off into the world to see what his newly blooded vampire status can get him in the human world. Sucking all he can out of humanity, Larten stumbles into a violent, hedonistic lifestyle, where cheats beckon, power corrupts, and enemies are waiting. This is his story.

Pharmacy OSCEs Elsevier Health Sciences

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates.

Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Developing and Validating Multiple-choice Test Items Academic Foundation

About 550 registrants from 51 different countries attended the Seventh Ottawa Conference on Medical Education and Assessment in Maastricht. We received 525 abstracts for the conference, divided in thematic poster sessions and platform presentations. Organising the conference was an honour and we tried to meet the high standards of a friendly and relaxed atmosphere which has characterized previous Ottawa conferences. During and after the conference about 250 papers were submitted for publication in the conference proceedings, leaving us little time for a post-conference depression. Despite the large number of papers, the editors have attempted to review and edit the papers as care fully as possible. Occasionally, however, correspondence exceeded reasonable deadlines, preventing careful editing of a small number of the papers. Although we felt that our editorial task was not quite finished, we nevertheless decided to include these papers. We thank the many authors for their enthusiastic and prompt response to - occasionally tedious - editorial suggestions and requests. We are sure that this collective effort has resulted in a book that will make an important contribution to the field of medical education. The editors want to thank Jocelyn Flippo-Berger whose expertise

with desk top publishing and perseverance was a great help.
