This textbook provides an accessible introduction to discourse intonation for ESL/EFL instructors, whether practicing or in pre-service graduate programs. Because intonation is used to form impressions about a speaker's attitude, it is crucial that instructors understand the details of the underlying linguistic system so that they can help students avoid the more common intonation-related pitfalls they experience when communicating in an academic setting. This textbook relies heavily on the Brazil model; chapters are organized around different parts of that model and how they can be most effectively taught. Readers will learn the conventions underlying, for example, how we group words in prosodic units, how we understand turn-taking cues in conversation, and how we assess whether someone is feeling angry or sad. This text features Check Your Learning sections, discussion questions, and hands-on activities at the end of every chapter. Chapters 3-9 also include a section on pedagogical implications. Some of the example sentences that illustrate intonation have accompanying short audio (MP3) files, which can be found online at www.press.umich.edu/elt/compsite/DI/. Book jacket.

Intonation in Context is for upper-intermediate and advanced learners of English who want to improve their intonation. It aims to make learners aware of the main features of intonation and provides enjoyable activities for both controlled and freer practice in a range of conversational situations. Intonation is presented as a system which has an important communicative function in any interaction between speaker and listener. Learners first explore the meaning conveyed by the parts of this system before going on to a variety of production exercises. The book is intended to be used alongside any general coursebook to provide a systematic and accessible introduction to this often neglected area of pronunciation. The easy-to-follow explanations assume no specialist knowledge of the subject and the accompanying CD provides clear models, making this an excellent choice for both classroom use and self-study.

The series serves to propagate investigations into language usage, especially with respect to computational support. This includes all forms of text handling activity, not only interlingual translations, but also conversions carried out in response to different communicative tasks. Among the major topics are problems of text transfer and the interplay between human and machine activities.

Non-Native Prosody: Phonetic Description and Teaching Practice is a response to the increasing interest in the field of prosody in second language acquisition and teaching. The volume presents an overview of the state of the art in second language prosody learning and teaching and brings together linguistic research on the description and modelling of non-native prosodic structures with L2 teaching methods and practices. The first part comprises descriptions of non-native prosodic structures (including intonation, stress and speech rhythm) as well as methodological considerations of research in second language acquisition written by experts in the field. These overviews of current theoretical models and results from empirical studies are presented in a format accessible to language teachers. In the second part, some of the leading teaching practitioners and developers of phonological learning materials present a variety of methods and exercises in the area of prosody. The accompanying audio examples on a CD-ROM make a useful addition illustrating the descriptions and exercises for various target and source languages.

It has long been an assumption in the field of English as a foreign language that those who speak the language as natives pronounce the way it should be taught. Most influential figures in the field have been outsiders, and the subject has accordingly not been really defined as the teaching of English as a foreign language, but as the teaching of English to foreigners: quite a different thing. This book discusses the designing of programs for learning which will take the different kinds of foreign-ness into account.

Phonology for Listening brings listening in English Language Teaching into the 21st century. Learners have problems decoding fast spontaneous speech, and Phonology for Listening - using many recorded examples - provides teachers of English with new concepts, fresh thinking and innovative practical ideas to help students decode the realities of spontaneous speech. It is written for teachers of English worldwide. There are four parts, each with five chapters. The window on speech framework introduces the framework which is used for the analysis and presentation of recorded examples and for teaching listening. Describing spontaneous speech examines what happens to words when they are subjected to the speeds, rhythms and stresses of spontaneous speech. First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual

learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.
