Agrobiodiversity Penguin Random House New Zealand Limited
Owing to climate change related uncertainties and anticipated population growth, different parts of the developing and the developed world (particularly urban areas) are experiencing water shortages or flooding and security of fit-for-purpose supplies is becoming a major issue. The emphasis on decentralized alternative water supply systems has increased considerably. Most of the information on such systems is either scattered or focuses on large scale reuse with little consideration given to decentralized small to medium scale systems. Alternative Water Supply Systems brings together recent

research into the available and innovative options and additionally shares experiences from a wide range of contexts from both developed and developing countries. Alternative Water Supply Systems covers technical, social, financial and institutional aspects associated with decentralized alternative water supply systems. These include systems for greywater recycling, rainwater harvesting, recovery of water through condensation and sewer mining. A number of case studies from the UK, the USA, Australia and the developing world are presented to discuss associated environmental and health implications. The book provides insights into a range of aspects associated with alternative water supply systems and an evidence base (through case studies) on potential water savings and trade-offs. The information organized in the book is aimed at facilitating wider uptake of context specific alternatives at a

decentralized scale mainly in urban areas. This book is a key reference for postgraduate level students and researchers interested in environmental engineering, water resources management, urban planning and resource efficiency, water demand management, building service engineering and sustainable architecture. It provides practical insights for water professionals such as systems designers, operators, and decision makers responsible for planning and delivering sustainable water management in urban areas through the implementation of decentralized water recycling. Authors: Fayyaz Ali Memon, Centre for Water Systems, University of Exeter, UK and Sarah Ward, Centre for Water Systems, University of Exeter, UK

Criminology and Criminal Policy Movements Penguin Group

Toni has always had nightmares about fire, and she also has burn scars but no idea how she got them. So when fire destroys the orphanage she has grown up in, she is ready to make her way to Toronto, where she hopes to discover the truth about the mother she believes hurt and then abandoned her. Toronto proves to be both daunting and exciting for Toni, whose charm and innocence attract attention—not always positive—wherever she goes.

Buoyed by the music she hears at the folk club where she finds a job, and encouraged by her glamorous landlady, Toni unearths shocking information that contradicts everything she believes and makes her re-evaluate what she feels for all the new people in her life. Part of the SECRETS—a series of seven linked novels that can be read in any order.

New Global Perspectives on Industrial Engineering and Management Academic Press

This book is a study of the Basque variety spoken in Lekeitio

(Vizcaya). As such we have intended to make a direct contribution to Basque dialectology, aiming at setting certain standards for research in this area. In addition, we believe that some of the materials assembled in this work will be of interest to a larger audience beyond Basque specialists. It is for this reason that we decided to write the present book in English. In our opinion, certain linguistic aspects are treated in more detail here than in any previous work on any other Basque variety. A case in point would be accentuation, both at the lexical level and in its relation to the syntactic process of focalization.

De los recursos naturales a la economía del conocimiento
Springer

Ethical and Responsible Tourism explains the methods and practices used to manage the environmental impact of tourism on local communities and destinations. The three core themes of the book – destination management, environmental and social aspects of ethical sustainable development and business impacts – are discussed across both topic and case study chapters, alongside explanatory editorial analysis with all chapters clearly signposted and interlinked. The case studies address specific and practical examples from a global range of examples including sites in Australia, Central America, Europe Union countries, Japan, North America and South America. Used as a core textbook, the linking of theory in the topic chapters, and practice gained through case studies, alongside further reading and editorial commentary, Ethical and Responsible Tourism provides a detailed and comprehensive learning experience. Specific case studies can be used as standalone examples as part of a case teaching approach, and the editorial and discussion elements are designed

to be suitable for those simply seeking a concise overview, such as tourism professionals or potential investors in sustainable tourism projects. This book will be essential reading for students, researchers and practitioners of tourism, environmental and sustainability studies.

Financial Counseling Orca Book Publishers

The study questions whether, after a decade of remarkable progress in trade reform, Latin America and the Caribbean really integrates into the global market, offering a promising rapid growth, and good jobs for its workers. For despite the incidence of the loosely called "knowledge economy", the concern prevails that most countries' rich natural resources, still are the determining factor for exports. Policy recommendations include fostering openness to trade, market access, and foreign direct investment flows, in addition to building human capital, institutions, and public infrastructure, without disregarding the natural advantages. To this end, policymakers should aim at developing educational systems that provide quality education, focused on lifelong learning, and training activities to build human capital. Emphasis should follow on research and development (R&D) incentives, and innovations systems, arguing that countries should experiment with taxation incentives, and subsidies to promote both private, and public investments in R&D, (dependent on the institutional capacity of governments to enforce tax laws, and monitor the quality of investments). Moreover, evidence in this report, suggests that information, and communications technology (ICT) can reduce coordination costs, enabling an effective industrialization, and market access.

Urban Regeneration in Europe IWA Publishing

An award-winning and extraordinary story of a boy who protects a baby whale that locals believe is threatening their livelihood. Winner of the Margaret Mahy Book of the Year New Zealand Book Awards for Children and Young Adults 2015 Young Adult Category Winner New Zealand Book Awards for Children and Young Adults 2015 Storylines Notable Young Adult Fiction Award 2015 Will Jackson is hiding out, a city boy reluctantly staying with his uncle in small town New Zealand while he struggles to recover from a brutal attack and the aftermath of a humiliating YouTube clip gone viral. After he discovers a young abandoned orca whale his life is further thrown into chaos, when he rallies to help protect it against hostile, threatening interests. This threatens to tear apart the small fishing community and forever changes Will's life. The boy and the whale develop a special bond, linked by Will's love of singing. With echoes of classic book and film The whalerider this powerful connection is utterly convincing on the page. An exciting plot-driven story full of drama, tension and romance, this magical book captures both heart and mind to hold the reader enthralled from start to finish. These qualities, along with its lyrical use of language and its compelling and persuasive exploration of many global concerns, makes this a beautifully touching, rich and multi-layered story by an award-winning writer for young adults. Singing Home the Whale will appeal to all readers of high-quality New Zealand fiction.

Alternative Water Supply Systems MIT Press

This book contextualizes translational research and provides an up to date progress report on therapies that are currently being targeted in lung cancer. It is now well established that there is tremendous heterogeneity among cancer cells both at the inter-

and intra-tumoral level. Further, a growing body of work highlights the importance of targeted therapies and personalized medicine in treating cancer patients. In contrast to conventional therapies that are typically administered to the average patient regardless of the patient's genotype, targeted therapies are tailored to patients with specific traits. Nonetheless, such genetic changes can be disease-specific and/or target specific; thus, the book addresses these issues manifested in the somatically acquired genetic changes of the targeted gene. Each chapter is written by a leading medical oncologist who specializes in thoracic oncology and is devoted to a particular target in a specific indication. Contributors provide an in-depth review of the literature covering the mechanisms underlying signaling, potential cross talk between the target and downstream signaling, and potential emergence of drug resistance.

Probiotic Bacteria and Postbiotic Metabolites: Role in Animal and Human Health De los recursos naturales a la economía del conocimiento

This book covers all aspects of probiotic bacteria and their metabolites, as well as their role and significance in human and animal health. Given the role of probiotic bacterial strains in the production of short chain fatty acids, butyrate etc probiotics may be considered as an alternative approach for the prevention or treatment of intestinal dysbiosis, cancers, cardiovascular diseases, hypertension. Additionally, the significance of probiotics added in aquaculture systems for improving health, performance and growth of aquatic organisms has been highlighted. In this book, the multi-functional role of probiotics and their post-biotic metabolites in improving overall health

status of man and animals, is discussed. It is a comprehensive compilation useful for researchers, academics, veterinarians and students in the field of microbiology, food technology and biotechnology.

College Yiddish Giramondo Publishing

General study of Guatemala - covers history, geographical aspects, population, ethnic groups, social structure, religious practices, education, health, the economy (agricultural sector, industrial sector), government, politics, the armed forces, etc. Bibliography, glossary, organigram, photographs, statistical tables.

Greywater Reuse Springer Science & Business Media

Michael's older brother dies at the beginning of the summer he turns 15, but as its title suggests *The Incredible Here and Now* is a tale of wonder, not of tragedy. Presented as a series of vignettes, in the tradition of Sandra Cisneros' Young Adult classic *The House on Mango Street*, it tells of Michael's coming of age in a year which brings him grief and romance; and of the place he lives in Western Sydney where 'those who don't know any better drive through the neighbourhood and lock their car doors', and those who do, flourish in its mix of cultures. Through his perceptions, the reader becomes familiar with Michael's community and its surroundings, the unsettled life of his family, the girl he meets at the local pool, the friends that gather in the McDonalds parking lot at night, the white Pontiac Trans Am that lights up his life like a magical talisman.

Systematic Studies in Flacourtiaceae World Bank Publications

"These studies recover the historical roots of thinking that are in

conflict with, and critical of, present-day tendencies. Criminological theory over the last few decades has oscillated between extremes: on one side there are calls for increasing the state exercise of punitive power as the only means of providing security, in the face of both urban and international crime; while the other side highlights the need for reducing the exercise of punitive power because of the paradoxical effects that it produces. Useful for academics, practitioners, professionals and students, this book will certainly contribute to a wider awareness in crime prevention and criminal justice."--Publisher's website.

The Basque Dialect of Lekeitio CRC Press

Reports on the emergence and prevalence of resistant bacterial infections in hospitals and communities raise concerns that we may soon no longer be able to rely on antibiotics as a way to control infectious diseases. Effective medical care would require the constant introduction of novel antibiotics to keep up in the "arms race" with resistant pathogens. This book closely examines the latest developments in the field of antibacterial research and development. It starts with an overview of the growing prevalence of resistant Gram-positive and Gram-negative pathogens, including their various resistance mechanisms, prevalence, risk factors and therapeutic options. The focus then shifts to a comprehensive description of all major chemical classes with antibacterial properties, their chemistry, mode of action, and the generation of analogs; information that provides the basis for the design of improved molecules to defeat microbial infections and combat the emerging resistances. In closing, recently developed compounds already in clinical use, those in preclinical or first clinical studies, and a number of

promising targets to be exploited in the discovery stage are discussed.

Extreme Weather Events and Public Health Responses Springer Nature

In 2004, the WHO Regional Office for Europe and the European Environment Agency organized a meeting to exchange information and develop recommendations on public health and environmental responses to weather and climate extremes. This book reflects a collection of case studies and experiences of experts, ministries and international organizations.

John Wiley & Sons

This book is the first comprehensive treatment of Aotus, the nocturnal New World owl monkeys often used in behavioral and biomedical studies. Found in tropical forests from Nicaragua to Argentina, owl monkeys have been used in laboratories as model organisms for studies of diseases like malaria, and various forms of cancer, as well as studies of reproductive physiology and neuroanatomical structure and function. These and other recent studies of this fascinating primate are included in this new volume. As the only book devoted exclusively to owl monkeys, this volume is an invaluable addition to the library of anyone interested in primate biology, evolution, ecology, and behavior.

Key Features * Only book devoted entirely to owl monkeys * Surveys issues that pertain to wild and captive populations * Represents the breadth of studies that model organisms can engender

Dictionary and Grammar of the Chamorro Language of the Island of Guam John Wiley & Sons

Greywater Reuse examines the features and implications of

greywater reuse scientifically, quantitatively, and thoroughly. Based on the authors' extensive studies of treatment facilities in urban and rural environments, development of greywater treatment systems, and research of potential environmental and health risks posed by greywater at different treatment levels, this authoritative text: Describes the chemical, physical, and microbial properties of greywater Covers the treatment and removal of greywater pollutants, providing case studies of common methods Identifies the risks involved in greywater use and proposes regulatory measures to help reduce these risks Reviews the greywater management strategies, policies, and legislation of several different countries Discusses the prevailing public perception and willingness to adopt various uses of greywater Analyzes the economic impact of greywater reuse from both the consumer and national perspectives Greywater Reuse addresses all major aspects related to greywater reuse, making it a valuable resource for a variety of applications.

Handbook of Methadone Prescribing and Buprenorphine Therapy
IWA Publishing (International Water Assoc)

"This text is a valuable new resource that we recommend for all of our professionals and are proud to incorporate as part of our AFC® certification program. With expertise representing the breadth and depth of the financial counseling profession, the content in this text provides you with a rigorous foundation of knowledge, considers critical theoretical models, and explores foundational skills of communication, self-awareness, and bias. This type of comprehensive approach aligns with our mission and vision—providing you with the foundational knowledge to meet clients where they are across the financial life-cycle and impact

long-term financial capability." -Rebecca Wiggins, Executive Director, AFCPE® (Association for Financial Counseling and Planning Education®) This timely volume presents a comprehensive overview of financial counseling skills in accessible, practical detail for readers throughout the career span. Expert financial counselors, educators, and researchers refer to classic and current theories for up-to-date instruction on building long-term client competence, working with clients of diverse backgrounds, addressing problem financial behavior, and approaching sensitive topics. From these core components, readers have a choice of integrated frameworks for guiding clients in critical areas of financial decision-making. This essential work: · Offers an introduction to financial counseling as a practice and profession · Discusses the challenges of working in financial counseling · Explores the elements of the client/counselor relationship · Compares delivery systems and practice models · Features effective tools and resources used in financial counseling · Encourages counselor ethics, preparedness, and self-awareness A standout in professional development references, Financial Counseling equips students and new professionals to better understand this demanding field, and offers seasoned veterans a robust refresher course in current best practices. Biophysical Aspects of Transmembrane Signaling John Wiley & Sons

This book provides a comparative account of the process of urban regeneration and examines the factors influencing these processes, as well as the consequences of their implementation. Through a mixture of theoretical discussion and a series of case studies a thorough examination is made of the extent to which

these different European old industrial conurbations are facing similar problems.

The Art Journal Springer Science & Business Media

Experts discuss the challenges faced in agrobiodiversity and conservation, integrating disciplines that range from plant and biological sciences to economics and political science. Wide-ranging environmental phenomena—including climate change, extreme weather events, and soil and water availability—combine with such socioeconomic factors as food policies, dietary preferences, and market forces to affect agriculture and food production systems on local, national, and global scales. The increasing simplification of food systems, the continuing decline of plant species, and the ongoing spread of pests and disease threaten biodiversity in agriculture as well as the sustainability of food resources. Complicating the situation further, the multiple systems involved—cultural, economic, environmental, institutional, and technological—are driven by human decision making, which is inevitably informed by diverse knowledge systems. The interactions and linkages that emerge necessitate an integrated assessment if we are to make progress toward sustainable agriculture and food systems. This volume in the Strüngmann Forum Reports series offers insights into the challenges faced in agrobiodiversity and sustainability and proposes an integrative framework to guide future research, scholarship, policy, and practice. The contributors offer perspectives from a range of disciplines, including plant and biological sciences, food systems and nutrition, ecology, economics, plant and animal breeding, anthropology, political science, geography, law, and sociology. Topics covered include

evolutionary ecology, food and human health, the governance of agrobiodiversity, and the interactions between agrobiodiversity and climate and demographic change.

The Unlikely Hero of Room 13B Universidad del Pais Vasco

The need for novel antibiotics is greater now than perhaps anytime since the pre-antibiotic era. Indeed, the recent collapse of many pharmaceutical antibacterial groups, combined with the emergence of hypervirulent and pan-antibiotic-resistant bacteria has severely compromised infection treatment options and led to dramatic increases in the incidence and severity of bacterial infections. This collection of reviews and laboratory protocols gives the reader an introduction to the causes of antibiotic resistance, the bacterial strains that pose the largest danger to humans (i.e., streptococci, pneumococci and enterococci) and the antimicrobial agents used to combat infections with these organisms. Some new avenues that are being investigated for antibiotic development are also discussed. Such developments include the discovery of agents that inhibit bacterial RNA degradation, the bacterial ribosome, and structure-based approaches to antibiotic drug discovery. Two laboratory protocols are provided to illustrate different strategies for discovering new antibiotics. One is a bacterial growth inhibition assay to identify inhibitors of bacterial growth that specifically target conditionally essential enzymes in the pathway of interest. The other protocol is used to identify inhibitors of bacterial cell-to-cell signaling. This e-book — a curated collection from eLS, WIREs, and Current Protocols — offers a fantastic introduction to the field of antibiotics and antibiotic resistance for students or interdisciplinary collaborators. Table of Contents: Introduction

Antibiotics and the Evolution of Antibiotic Resistance eLS Jose L Martinez, Fernando Baquero Antimicrobials Against Streptococci, Pneumococci and Enterococci eLS Susan Donabedian, Adenike Shoyinka Techniques & Applications RNA decay: a novel therapeutic target in bacteria WIREs RNA Tess M. Katie likes to believe she's invisible. It seems so much safer than

being exposed as who she is: shy, poor, and vulnerable. So getting up in front of audience as the lead in her school's production of *The Taming of the Shrew* should be complete torture. But as Katie tells it, something totally unexpected happened when she stepped on stage: "My head exploded. I loved it. Acting hit me like a sucker punch and I loved, loved, loved it! Invisible Katie became visible Katherina." Evan is, as they say, another story. He knows just what it takes to get noticed, and he uses every one of the skills he's perfected from years of being the new kid at yet another new school. Rich, smart, and ridiculously charming, he's like nothing and no one Katie has ever encountered. How then could someone like him possibly be interested in someone like her? But before she knows it they are inseparable. Over the dizzying course of their relationship, Katie must confront the fact that the power of love can conceal darker truths.
