BoD - Books on Demand
A Politician Turned General offers a critical examination of the turbulent early political career and the controversial military service of Stephen Augustus Hurlbut, an Illinois Whig, Republican politician, and Northern political general who rose to distinction as a prominent member of the Union high command in the West during the Civil War. Though traditionally there are two different characterizations of those who exercised command during the Civil War - soldier-politician and the political generals - Hurlbut was viewed as a military politician. This book provides an important study of another friend and/or political supporter of Lincoln who rose to general during the war and gained important appointments after the war. This first biography of Hurlbut chronicles the early life and the Civil War career of one of Abraham Lincoln's foremost military appointments. Through exhaustive research of primary and secondary sources, author Jeffrey N. Lash identifies and evaluates the successes and failures of Hurlbut's generalship and combat leadership, both as a field commander in Missouri in 1861 and as a division commander at the Battles of Shiloh and Hatchie Bridge in 1862. University and Research Library Studies, Volume 8 presents the growing awareness of the international character of library studies. This book discusses the highly organized approach to library science research in Eastern Europe. Comprised of six chapters, this volume begins with an overview of the advantages of the comparative study of the libraries of various countries, including the possibilities of development and solutions to familiar difficulties. This text then examines the role of the library as a teaching instrument whereby instructions and library assignments are included as an integral part of the normal courses in the curriculum. Other chapters consider the background to the foundation of the Library of the School of Oriental and African Studies. This book discusses as well the function of the university library to bring together information and human beings. The final chapter deals with the types of activities that constitute library science research. Librarians will find this book useful.

A General Treatise on the Manufacture of Vinegar Springer Science & Business Media

Contains annual financial report, reports of schools, departments, committees, other administrative offices, and publications of the faculty.

Turning and Mechanical Manipulation Taylor & Francis

This book examines the meanings, uses, and agency of voice, noise, sound, and sound technologies across Asia. Including a series of wide-ranging and interdisciplinary case studies, the book reveals sound as central to the experience of modernity in Asia and as essential to the understanding of the historical processes of cultural, social, political, and economic transformation throughout the long twentieth century. Presenting a broad range of topics - from the changing sounds of the Kyoto kimono making industry to radio in late colonial India - the book explores how the study of Asian

sound cultures offers greater insight into historical accounts of local and global transformation.

Challenging us to rethink and reassemble important categories in sound studies, this book will be a vital resource for students and scholars of sound studies, Asian studies, history, postcolonial studies, and media studies.

Asian Sound Cultures Writers Exchange E-Publishing

by Conference Chairman n1 It is my pleasure to introduce this volume of Proceedings for the 33 MATADOR Conference. The Proceedings include 83 refereed papers submitted from 19 countries on 4 continents. 00 The spread of papers in this volume reflects four developments since the 32 MATADOR Conference in 1997: (i) the power of information technology to integrate the management and control of manufacturing systems; (ii) international manufacturing enterprises; (iii) the use of computers to integrate different aspects of manufacturing technology; and, (iv) new manufacturing technologies. New developments in the manufacturing systems area are globalisation and the use of the Web to achieve virtual enterprises. In manufacturing technology the potential of the following processes is being realised: rapid proto typing, laser processing, high-speed machining, and high-speed machine tool design. And, at the same time in the area of controls and automation, the flexibility and integration ability of open architecture computer controllers are creating a wide range of opportunities for novel solutions. Up-to-date research results in these and other areas are presented in this volume. The Proceedings reflect the truly international nature of this Conference and the way in which original research results are both collected and disseminated. The volume does not, however, record the rich debate and extensive scientific discussion which took place during the Conference. I trust that you will find this volume to be a permanent record of some of the research carried out in the last two years; and.

Assessing Government Transparency in China(2018) Kent State University Press

In 1987, Tadhg O'Kelly's graduates as Kilkarney's top cadet in his career as an army forensic investigator. As the years go by, he gradually knits the threads of evidence from numerous kidnappings of women and children into a noose. But finding the guilty neck to tie it around will require all his skill, and not a little help. Royal Army General Mara Meathe returns to Tara after numerous troubleshooting tasks around the world to face her biggest and deadliest challenges yet. A friend of Mara's, Nellie Hacker, arrives from Tara to her home Earth of Tirdia to assist Day MacAllister with some court-appointed espionage.

Responding to the Inspector General's Findings of Improper Use of National Security Letters by the

FBI

This book, based on empirical and quantitative research, assesses the development of openness in government affairs in China. The content is divided into five parts, namely a general report, special reports, assessment reports on government transparency, reports on the openness of government in specific fields and how openness in government affairs is locally practiced. Covering the country as a whole, the general report summarizes significant aspects of openness in government affairs at all levels regarding, e.g. decision-making, law enforcement, management, service, policy interpretation and responding to public concerns. In addition, the general report reveals some current problems and provides an outline of openness in government affairs for the future. Focusing on decision-making, social assistance, environmental protection, transport, education and other fields closely related to public interest and social attention, the book subsequently summarizes a number of special works concerning openness in government affairs. Furthermore, it conducts a special study on the standardized work of openness in government affairs, which has been actively pursued by departments of the State Council and local governments. In order to provide representative coverage on openness in government affairs, the book combines innovative measures, experiences and problems, while also sharing an in-depth analysis of the difficulties involved in openness for local governments, including examples from several provinces and cities.

Official Opinions of the Attorneys General of the United States

The market for information technology products is rapidly changing from a manufacturer-driven market where new products were determined by the evolution of technology, to a user-driven market where users buy only products corresponding exactly to their needs and where competition is very strong. Confronted with this market situation, hardware and software producers are being obliged to adopt new strategies, and to make a large number of products available on the market in response to a variety of different needs. As a result of the multiplicity of choice available, the design of an office system which corresponds precisely to user needs is becoming an increasingly complex task. With exactly this in mind, the Commission, as early as 1985, invited submissions of projects aiming at the development of such adequate tools in its Call for Proposals for the ESPRIT

Programme, in order to assist companies in the design of their office systems. This topic was recognised as being of strategic importance, considering the low level of penetration of Information Technology in European enterprises compared to the United States and Japan. Following this strategy, the project TODOS was selected and launched. This project has successfully developed tools and methods for the definition of the functional specification of the office system, as well as the system architecture and user interface -results which can be of great interest for the IT community at large.

A Catalogue of Books Printed in the Fifteenth Century Now in the Bodleian Library

From the reviews: "It survives the pitfalls of this fashion-conscious era by pursuing a rigorously independent-minded attitude to contemporary ideas. The level is introductory undergraduate, with rather little mathematics but a strong physical basis. ...The second part, on general relativity and cosmology, provides a good account of modern theoretical ideas, from rotating black holes to Grand Unified Theories and inflation. The third part is an excellent and profound discussion of the fundamental problems of cosmology. For anyone with a philosophical turn of mind this section alone makes the book essential reading."
