 This book deciphers the three ultimate questions in human philosophy from a new and simplified perspective. It opens up the underlying logical relationship between life, the universe, and human society. It completely overturns the traditional scientific perception and understanding of happiness. The book redefines the nature of organisms and the essence of life by peeling back the layers of contradictions in the evolution of organisms and the evolution of human civilization. This book proposes the hypothesis of female and male particles, basexon and baseyon, that can reach the upper bound of human imagination to reinterpret the natural significance of several existing

scientific cognitions. The analysis of the complexity trap of current scientific cognition is also included. The book proposes two major visions for transforming human society: forgetting about learning and the trust revolution. These visions serve as a guide for the reader's thoughts and actions on how to achieve a true sense of freedom and happiness. The book contains numerous interesting and subversive ideas, which are discussed at length throughout the text. Due to space limitations, only a few examples can be listed here. - Biological nature is a strategic choice for survival, reproduction, security, and connection in terms of energy balance, intake, and lock-in. - Voluntary mutation is a strategy for trial and error and preparation for the next evolutionary leap. - Biological inheritance and passive variation are determined by four stratified genes, which are sequentially influenced by the environment. - The physical form of life is characterized by a boundary that separates the inside from the outside. The crucial phases of the birth of life forms, both biotic and abiotic, involve material combination and aggregation. - The use of language and thinking by humans has advantages during the connections among humans, but it also brings the disadvantage of complexity and reliance on shifting trust mechanisms. - Organisms follow a

biological constitution in the pursuit of bioactivity, their origin similar to the law of abiogenesis in the cosmos.

The past century has been an exciting era for the Bengalis in Malaysia attempting to preserve our identity and cultural heritage. However with the dilution of the community the radar for the coming years is misty. In the course of our efforts to uphold our identity and provide services to the public and be counted, we have not lost sight of our primary professional responsibility as doctors. Many have contributed towards the advancement of the profession by actively participating in research as well as providing financial grants. It is an opportune time to write this book. Our identity might be totally lost in the next 100 years except for the imposing edifice of Bengal House in Port Dickson, Negri Sembilan to bear testimony to the once thriving, vibrant proud Bengali community. The publication would be collecting dust and cobwebs and would be useful only to historians possibly excavating into our possible extinct past. Since commencing this book, two very prominent senior members have passed away, and it is most unfortunate that they have not seen this humble effort. We live in a global world transcending geographical boundaries and preservation of the last vestiges of our heritage should be the responsibility of each and every one of us. The objectives of undertaking this Herculean task which hopefully have been fulfilled were an attempt to: Compile a list of Bengali doctors since their first arrival more than 100 years ago in what was then Malaya together with the subsequent 2nd & 3rd generation doctors born here. Some names might have been left out inadvertently for which sincere apologies are extended while a handful had not responded to repeated efforts to contact them or their next of kin. Explore the reasons for their migration. Many who were from the same district of East Bengal as Rai Bahadur Dr Sarojininath Bardhans and were related to him through his marriages were probably influenced by his success. Some arrived to avoid political persecutions. Global conditions such as World Wars I & II and the Great Depression of the 1930s obviously played an important part in the decision making process. The Post World War II years witnessed the return of local doctors whose studies were interrupted and a couple had harrowing experiences to narrate. Some contract doctors were also recruited directly by private local clinics. Highlight the decades of the 50&60s which could be rightly considered as the golden era for the Bengali doctors. There were insufficient numbers of local graduates to fill the posts as most of the Chinese doctors went into the vast lucrative private sector while very few Malays had taken up Medicine. Although a large number had applied from Bengal, only about 35-40 doctors including a few with post graduate qualifications were recruited. Some climbed up the ranks and became senior administrative officers, appointed not on the basis of availability but because of their capability and proven track records. In the 1960s, the Medical Faculty of University of Malaya was established in Kuala Lumpur and some Calcutta graduates with post graduate qualifications from the United Kingdom were offered key posts to help jump start certain disciplines. This was an excellent testimony of the academic standards of Calcutta University graduates. These two decades also witnessed the successes of the 2nd generation Bengalis with a couple completing their post graduate medical

studies in double-quick time. The first Malaysian Radiologist to start Angiographic studies and to be awarded a neuro-vascular fellowship in Sweden in 1968/69 was a Bengali. In view of the limited number of super scale posts, many however were given glorified titles of State Physicians or Surgeons despite being only Clinical Specialists! Reiterate the contributions of Bengali doctors towards the Malayisation of the medical and health services in the two states of Sabah & Sarawak in early 1970s. The efforts of Dr. Rabindranath Roy in unifying

This accessible textbook gives beginning undergraduate mathematics students a first exposure to introductory logic, proofs, sets, functions, number theory, relations, finite and infinite sets, and the foundations of analysis. The book provides students with a quick path to writing proofs and a practical collection of tools that they can use in later mathematics courses such as abstract algebra and analysis. The importance of the logical structure of a mathematical statement as a framework for finding a proof of that statement, and the proper use of variables, is an early and consistent theme used throughout the book.

Islamophobic hate crimes have increased significantly following the terrorist attacks of 9/11 and 7/7. More recently, the rhetoric surrounding Trump's election and presidency, Brexit, the rise of far-right groups and ISIS-inspired terrorist attacks worldwide have promoted a climate where Islamophobia and anti-Muslim sentiments have become 'legitimised'. The Routledge International Handbook of Islamophobia provides a comprehensive single-volume collection of key readings in Islamophobia. Consisting of 32 chapters accessibly written by scholars, policy makers and practitioners, it seeks to examine the nature, extent, implications of, and responses to Islamophobic hate crime both nationally and internationally. This volume will appeal to undergraduate and postgraduate students as well as postdoctoral researchers interested in fields such as Criminology, Victimology, Sociology, Social Policy, Religious Studies, Law and related Social Sciences subjects. It will also appeal to scholars, policy makers and practitioners working in and around the areas of Islamophobic hate crimes.

CNN host and best-selling author Fareed Zakaria argues for a renewed commitment to the world's most valuable educational tradition. The liberal arts are under attack. The governors of Florida, Texas, and North Carolina have all pledged that they will not spend taxpayer money subsidizing the liberal arts, and they seem to have an unlikely ally in President Obama. While at a General Electric plant in early 2014, Obama remarked, "I promise you, folks can make a lot more, potentially, with skilled manufacturing or the trades than they might with an art history degree." These messages are hitting home: majors like English and history, once very popular and highly

respected, are in steep decline. "I get it," writes Fareed Zakaria, recalling the atmosphere in India where he grew up, which was even more obsessed with getting a skills-based education. However, the CNN host and best-selling author explains why this widely held view is mistaken and shortsighted. Zakaria eloquently expounds on the virtues of a liberal arts education—how to write clearly, how to express yourself convincingly, and how to think analytically. He turns our leaders' vocational argument on its head. American routine manufacturing jobs continue to get automated or outsourced, and specific vocational knowledge is often outdated within a few years. Engineering is a great profession, but key value-added skills you will also need are creativity, lateral thinking, design, communication, storytelling, and, more than anything, the ability to continually learn and enjoy learning—precisely the gifts of a liberal education. Zakaria argues that technology is transforming education, opening up access to the best courses and classes in a vast variety of subjects for millions around the world. We are at the dawn of the greatest expansion of the idea of a liberal education in human history.

There is no doubt about the importance of assessment: it defines what students regard as important, how they spend their time and how they come to see themselves - it is a necessary part of helping them to learn. This text provides background research on different aspects of assessment. Its purpose is to help lecturers to refresh their approach to the assessment of student learning. It explores the nature of conventional assessment such as essays and projects, and also considers less widely used approaches such as self- and peer-assessment. There are also chapters devoted to the use of IT, the role of external examiners and the introduction of different forms of assessment. With guidelines, suggestions, examples of practice and activities, this book will become a springboard for action, discussion and even more active learning.
