Hodder Murray  
More than 800,000 copies

in print! From the author  
of critically acclaimed and  
bestselling memoir *Falling  
Leaves*, this is a poignant  
and moving true account  
of her childhood, growing  
up as an unloved  
daughter in 1940s China.  
A Chinese proverb says,  
"Falling leaves return to  
their roots." In her own  
courageous voice, Adeline  
Yen Mah returns to her

roots to tell the story of her painful childhood and her ultimate triumph in the face of despair. Adeline's affluent, powerful family considers her bad luck after her mother dies giving birth to her, and life does not get any easier when her father remarries. Adeline and her siblings are subjected to the disdain of her stepmother, while her stepbrother and stepsister are spoiled with gifts and attention. Although Adeline wins prizes at school, they are not enough to compensate for

what she really yearns for -- the love and understanding of her family. Like the classic Cinderella story, this powerful memoir is a moving story of resilience and hope. Includes an Author's Note, a 6-page photo insert, a historical note, and the Chinese text of the original Chinese Cinderella. A PW BEST BOOK OF THE YEAR AN ALA-YALSA BEST BOOK FOR YOUNG ADULTS "One of the most inspiring books I have ever read."

This classroom-tested textbook is an introduction to probability theory, with the right balance between mathematical precision, probabilistic intuition, and concrete applications. Introduction to Probability covers the material precisely, while avoiding excessive technical details. After introducing the basic vocabulary of randomness, including events, probabilities, and random variables, the text

offers the reader a first glimpse of the major theorems of the subject: the law of large numbers and the central limit theorem. The important probability distributions are introduced organically as they arise from applications. The discrete and continuous sides of probability are treated together to emphasize their similarities. Intended for students with a calculus background, the text teaches not only the nuts and bolts of probability theory and how to solve specific

problems, but also why the methods of solution work.

From Ancient Greece to the present day, Trivium 21c explores whether a contemporary trivium

(Grammar, Dialectic, and Rhetoric) can unite progressive and traditionalist institutions, teachers, politicians and parents in the common pursuit of providing a great education for our children in the 21st century. Education policy and practice is a battleground. Traditionalists argue for the teaching of a privileged type of hard knowledge and deride soft skills. Progressives deride learning about great works of the past preferring '21c skills' (21st

century skills) such as creativity and critical thinking. Whilst looking for a school for his daughter, the author became frustrated by schools' inability to value knowledge, as well as creativity, foster discipline alongside free-thinking, and value citizenship alongside independent learning. Drawing from his work as a creative teacher, Robinson finds inspiration in the Arts and the need to nurture learners with the ability to deal with the uncertainties of our age.
