Bernard Maybeck Cool

Spring Press

The work of Bernard
Maybeck has

influenced generations of architects. His landmark buildings include the Palace of Fine Arts and First Church of Christ, Scientist. His emphasis on an open use of natural materials marks him as a pioneer in sustainable architecture, or “green design.” Maybeck’s work achieves that delicate balance between historicism and modernism, and his buildings are still in use throughout several states on the West Coast and the Midwest. This book includes more than two dozen Maybeck buildings that have never been photographed in color in any other book, as well as several of his buildings that were never documented before. Architect of Elegance not only

encompasses his most memorable works but also includes letters and drawings from the family archives never before seen by the general public. The foreword is written by Maybeck’s granddaughter, Cherry Maybeck Nittler. Author Mark Wilson’s 22-year friendship with Bernard Maybeck’s daughter-in-law, Jacomena Maybeck, gave him unique insights into the life and work of one of America’s most important architects.

East Corridor Project

Springer Science & Business Media
Now revised, this landmark reference surveys every American housing style from Native American days to the present. Over 100 styles are covered, including 1700s Dutch Colonials

and New England saltboxes, Southern plantation mansions, Shaker dwellings, and much more. Includes detailed drawings of each style, with exploded diagrams and floor plans. Over 1,000 illustrations.

Popular Science

Bloomsbury Publishing
 Almost every practical astronomer eventually aspires to have a fixed, permanent observatory for his or her telescope. A roll-off roof or dome observatory is the answer for the most popular home observatory design. Building a Roll-Off or Dome Observatory will help you decide whether to embark on the venture and will certainly increase your enthusiasm for the project. The author, both an amateur

astronomer and a professional landscape architect, answers many of the common questions asked about observatory construction, covering the following topics: • Zoning, and by-law requirements common to most states, towns and municipalities • Where to locate the observatory • How to tailor the observatory for your particular needs • Tools and structural components required • Possible variations in design • How to combine the structure with other structures (incorporating a garden patio under the gantry in the roll-off roof observatory, for example) This fully detailed outlines step-by-step construction, with professional detailed diagrams for

each phase of construction.

Lessons in Drawing Plans and Interiors CRC Press

"Focuses on taking students through each drawing they would have to do in a set of construction documents. Easy to understand for first time drafters." - Azizi Arrington-Bey, Indiana State University, US
Learn step-by-step how to hand draft and draw perspectives for interiors. After learning the basics-such as lettering, scales, and types of lines-this book guides you through two-color, illustrated lessons for five hand drafting projects and eight hand-drawn interiors. You'll learn to draft and draw both residential and commercial spaces, preparing you for your

career.

A Survey and Historic Significance Evaluation of CDF Building Inventory

Government Printing Office

Local communities have adapted for

centuries to challenging surroundings, resulting from unforeseen natural hazards. Vernacular architecture often reveals very intelligent responses attuned to the environment. Therefore, the question that emerged was: how did local populations prepare their dwellings to face frequent earthquakes? It was to respond to this gap in knowledge, that the SEISMIC-V research project was instigated, and this interdisciplinary international publication was prepared. The research revealed the existence of a local seismic culture, in terms of reactive or preventive seismic resistant measures, able to survive, if properly

maintained, in areas with frequent earthquakes. The fundamental contribution and aims of the publication were to enhance: -The disciplinary interest in vernacular architecture; -Its contribution to risk mitigation in responding to natural hazards; -To encourage academic and scientific research collaboration among different disciplines; -To contribute to the improvement of vernacular dwellings, which half of the world's population still inhabits nowadays. Fifty international researchers and experts presented case studies from Latin America, the Mediterranean, Eastern and Central Asia and the Himalayas region,

with reference to 20 countries, i.e. Algeria, Bolivia, Bhutan, Chile, China, Egypt, El Salvador, Greece, Haiti, Italy, Japan, Mexico, Morocco, Nepal, Nicaragua, Peru, Romania, Taiwan, Turkey and a closer detailed analysis of Portugal. This publication brings together 43 contributions, with new perspectives on seismic retrofitting techniques and relevant data, addressing vernacular architecture; an amazing source of knowledge, and to this day, home to 4 billion people.

A Sense of Place New Society Publishers

The most complete book on gazebos and arbors you can buy. The Complete Guide to Gazebos & Arbors

shows basic techniques for building sheltering structures in the landscape, and provides complete project plans and directions for more than 12 versatile, flexible architectural projects. An overhead arbor can turn a patio or deck into a cool oasis from which to enjoy a landscape, while a gazebo can serve as a full-fledged outdoor room with protective walls, ceilings, and even electrical service. Every reader will find this book to be an indispensable source of planning, design, and practical how-to information.

This insightful volume

shares design ideas to help builders, planners and architects create mass-produced affordable housing that pushes suburban development in more sustainable, liveable directions. The author argues that improving the quality of design in our new homes and communities for greater resiliency, sustainability, and equality, we can build neighborhoods and communities where residents feel more connected to their homes and to one another. Through text, photographs and illustrations, the book reviews prototypical American housing design, then suggests ways to both learn from the past as well as adapt for new environmental imperatives,

demographic changes and lifestyle needs. Written by a practicing architect with 25+ years of experience optimizing residential design, this pioneering approach to suburban building will inspire readers to view mass produced housing through a new, modern lens.

Black & Decker The Complete Guide to Gazebos & Arbors

Gibbs Smith
 "A significant contribution in Caribbean archaeology. Singleton weaves archaeological and documentary evidence into a compelling narrative of the lives of the enslaved at Santa Ana de Biajacas."--Patricia Samford, author of

Subfloor Pits and the Archaeology of Slavery in Colonial Virginia
 "Presents results of the first historical archaeology in Cuba by an American archaeologist since the 1950s revolution. Singleton's extensive historical research provides rich context for this and future archaeological investigations, and the entire body of her pioneering research provides comparative material for other studies of African American life and institutional slavery in the Caribbean and the Americas."--Leland Ferguson, author of *God's Fields: Landscape, Religion, and Race in Moravian Wachovia*
 "Singleton's enlightening findings on plantation slavery life will undoubtedly

constitute a reference point for future studies on Afro-Cuban archaeology."--Manuel Barcia, author of *The Great African Slave Revolt of 1825: Cuba and the Fight for Freedom in Matanzas* Cuba had the largest slave society of the Spanish colonial empire. At Santa Ana de Biajacas the plantation owner sequestered slaves behind a massive masonry wall. In the first archaeological investigation of a Cuban plantation by an English speaker, Theresa Singleton explores how elite Cuban planters used the built environment to impose a hierarchical social order upon slave laborers. Behind the wall, slaves reclaimed the space as their own,

forming communities, building their own houses, celebrating, gambling, and even harboring slave runaways. What emerged there is not just an identity distinct from other North American and Caribbean plantations, but a unique slave culture that thrived despite a spartan lifestyle. Singleton's study provides insight into the larger historical context of the African diaspora, global patterns of enslavement, and the development of Cuba as an integral member of the larger Atlantic World.

Black & Decker The Complete Guide to Porches & Patio Rooms
Gibbs Smith
From an old-fashioned porch swing to a white picket fence,

woodworking projects to enhance gardens, decks, and patios. In addition to detailed diagrams and photos, there's a key point box for every project. It includes the prep, shop, and assembly times, skill level, cost/benefit ratio, and more. Build a planter to show off flowers, shrubs and trees ; a handy garden cart; an outdoor dining set.

Slavery behind the Wall W. W. Norton & Company

Despite a European training and an early career working with Peter Behrens, a migration from Vienna to the Australian state of Queensland positioned the architect Karl Langer (1903-1969) at the very edge of both European and Australian modernism.

Confronted by tropical heat and glare, the economics of affordable housing, fiercely proud and regional architectural practices, and a suspicion of the foreign, Langer moulded the European language of international modernism to the unique climatic and social conditions of tropical Australia. This book will tell Langer's story through a series of edited essays focused on key themes and projects. Published as part of the Bloomsbury Studies in Modern Architecture series, which brings to light the work of significant yet overlooked modernist architects, it is both an examination of an architect's work and international legacy,

and also a case study in the trans-global dissemination of design ideas. Studying the architect's built and proposed work, both regional and metropolitan, the scale and reach of Langer's practice will be considered for the first time, showing how, given his continued influence on the contemporary culture of tropical design, Langer has been unjustly ignored by the historiography of both Australian and Modernist architecture to date.

Popular Mechanics

Fox Chapel Publishing
Almost every amateur astronomer who has taken the pursuit to its second level aspires to a fixed, permanent housing for his telescope, permitting its rapid and

comfortable use avoiding hours of setting-up time for each observing session. A roll-off roof observatory is the simplest and by far the most popular observatory design for today's practical astronomers. Building a Roll-off Roof Observatory is unique, covering all aspects of designing a roll-off roof observatory: planning the site, viewing requirements, conforming to by-laws, and orientation of the structure. The chapters outline step-by-step construction of a typical building. The author, both an amateur astronomer and professional landscape architect, is uniquely qualified to write this fully-detailed book. A professionally designed roll-off

observatory could cost as much as \$3000 just for the plans – which are provided free with Building a Roll-off Roof Observatory.

Build Your Own Sheds & Outdoor Projects Manual, Sixth Edition

Home Planners, LLC

Build the outdoor structure of your dreams with this essential DIY guide.

Build Your Own Shed & Outdoor Projects Manual, 6th Edition includes a catalog of more than 100 expertly prepared plans – including more than 60 all-new designs for this

updated edition – for building a wide range of outdoor structures, from storage sheds and home offices to playhouses, patio furniture, trellises, and so much more. Easy-to-follow construction blueprints and materials lists are also available for each project to ensure success.
