*Textual Sources For The Study Of
Zoroastrianism*

Downloaded from intra.itu.edu.tr by guest

RILEY ESCOBAR

Zoroastrianism Oxford University Press

"[This collection] is distinguished by its wide range and the care which has clearly gone into the selection of texts for inclusion. . . . Attention has understandably been focused on what might be called the religious aspects of Islam, such as scripture, theology, sects, law, ritual and mysticism, but within those limits the texts chosen are marked by substantially of content, by geographical, chronological and social diversity, and by an intelligent use of less well known authors. . . . An excellent starting point for a systematic and analytical examination of Islam."—G. R. Hawting,

Bulletin of the School of Oriental and African Studies
Using Non-Textual Sources Routledge

"McLeod is a renowned scholar of Sikhism. . . . [This book] confirms my view that there is nothing about the Sikhs or their religion that McLeod does not know and there is no one who can put it across with as much clarity and brevity as he can. In his latest work he has compressed in under 150 pages the principal sources of the Sikh religion, the Khalsa tradition and the beliefs of breakaway sects like the Nirankaris and Namdharis. . . . As often happens, an outsider has sharper insight into the workings of a community than insiders whose visions are perforce restricted."—Khushwant Singh, *Hindustan Times*
Deep Learning OUP USA

"Alexander assembles material from Scripture and tradition,

through religious law and ethical literature to a section on Society and the Jews, and prefaces the whole with an admirable introduction."—Jonathan Sacks, *Jewish Chronicle* "The texts . . . which are drawn from over two thousand years of history, are usefully divided, annotated and glossed. They enable students to explore the tradition in a new way [and] give a marvellous insight into the richness and liveliness of the Jewish religion and culture: we are given wit and pathos in addition to popular story and religious law."—Janet Trotter, *Resource Textual Sources for the Study of Zoroastrianism* University of Chicago Press

An interactive, multimedia text that introduces students to reading and writing at the college level.

A Reader of Ancient Near Eastern Texts Manchester University Press

This book is designed to introduce doctoral and graduate students to the process of conducting scientific research in the social sciences, business, education, public health, and related disciplines. It is a one-stop, comprehensive, and compact source for foundational concepts in behavioral research, and can serve as a stand-alone text or as a supplement to research readings in any doctoral seminar or research methods class. This book is currently used as a research text at universities on six continents and will shortly be available in nine different languages.

The Word on College Reading and Writing University of Chicago Press

This Second Edition of Diana Ridley's bestselling guide to the literature review outlines practical strategies for reading and note taking, and guides the reader on how to conduct a systematic

search of the available literature, and uses cases and examples throughout to demonstrate best practice in writing and presenting the review. New to this edition are examples drawn from a wide range of disciplines, a new chapter on conducting a systematic review, increased coverage of issues of evaluating quality and conducting reviews using online sources and online literature and enhanced guidance in dealing with copyright and permissions issues.

Reading Darwin in Arabic, 1860-1950 Translated Texts for Historian

In *Reading Darwin in Arabic*, Marwa Elshakry questions current ideas about Islam, science, and secularism by exploring the ways in which Darwin was read in Arabic from the late 1860s to the mid-twentieth century. Borrowing from translation and reading studies and weaving together the history of science with intellectual history, she explores Darwin's global appeal from the perspective of several generations of Arabic readers and shows how Darwin's writings helped alter the social and epistemological landscape of the Arab learned classes. Providing a close textual, political, and institutional analysis of the tremendous interest in Darwin's ideas and other works on evolution, Elshakry shows how, in an age of massive regional and international political upheaval, these readings were suffused with the anxieties of empire and civilizational decline. The politics of evolution infiltrated Arabic discussions of pedagogy, progress, and the very sense of history. They also led to a literary and conceptual transformation of notions of science and religion themselves. Darwin thus became a vehicle for discussing scriptural exegesis, the conditions of belief, and cosmological views more broadly.

The book also acquaints readers with Muslim and Christian intellectuals, bureaucrats, and theologians, and concludes by exploring Darwin's waning influence on public and intellectual life in the Arab world after World War I. Reading Darwin in Arabic is an engaging and powerfully argued reconceptualization of the intellectual and political history of the Middle East.

The Federalist Papers University of Chicago Press

The essential handbook for doing historical research in the twenty-first century The Princeton Guide to Historical Research provides students, scholars, and professionals with the skills they need to practice the historian's craft in the digital age, while never losing sight of the fundamental values and techniques that have defined historical scholarship for centuries. Zachary Schrag begins by explaining how to ask good questions and then guides readers step-by-step through all phases of historical research, from narrowing a topic and locating sources to taking notes, crafting a narrative, and connecting one's work to existing scholarship. He shows how researchers extract knowledge from the widest range of sources, such as government documents, newspapers, unpublished manuscripts, images, interviews, and datasets. He demonstrates how to use archives and libraries, read sources critically, present claims supported by evidence, tell compelling stories, and much more. Featuring a wealth of examples that illustrate the methods used by seasoned experts, The Princeton Guide to Historical Research reveals that, however varied the subject matter and sources, historians share basic tools in the quest to understand people and the choices they made. Offers practical step-by-step guidance on how to do historical research, taking readers from initial questions to final

publication Connects new digital technologies to the traditional skills of the historian Draws on hundreds of examples from a broad range of historical topics and approaches Shares tips for researchers at every skill level

Neo-Assyrian Sources in Context University of Chicago Press

First established 150 years ago, Chicago Sinai is one of America's oldest Reform Jewish congregations. Its founders were upwardly mobile and civically committed men and women, founders and partners of banks and landmark businesses like Hart Schaffner & Marx, Sears & Roebuck, and the giant meatpacking firm Morris & Co. As explicitly modern Jews, Sinai's members supported and led civic institutions and participated actively in Chicago politics. Perhaps most radically, their Sunday services, introduced in 1874 and still celebrated today, became a hallmark of the congregation. In *Sundays at Sinai*, Tobias Brinkmann brings modern Jewish history, immigration, urban history, and religious history together to trace the roots of radical Reform Judaism from across the Atlantic to this rapidly growing American metropolis. Brinkmann shines a light on the development of an urban reform congregation, illuminating Chicago Sinai's practices and history, and its contribution to Christian-Jewish dialogue in the United States. Chronicling Chicago Sinai's radical beginnings in antebellum Chicago to the present, *Sundays at Sinai* is the extraordinary story of a leading Jewish Reform congregation in one of America's great cities.

The Master Plan Barnes & Noble Imports

The inspiring, instructive, and ultimately triumphant memoir of a man who used hard work and a Master Plan to turn a life sentence into a second chance. Growing up in a tough

Washington, D.C., neighborhood, Chris Wilson was so afraid for his life he wouldn't leave the house without a gun. One night, defending himself, he killed a man. At eighteen, he was sentenced to life in prison with no hope of parole. But what should have been the end of his story became the beginning. Deciding to make something of his life, Chris embarked on a journey of self-improvement--reading, working out, learning languages, even starting a business. He wrote his Master Plan: a list of all he expected to accomplish or acquire. He worked his plan every day for years, and in his mid-thirties he did the impossible: he convinced a judge to reduce his sentence and became a free man. Today Chris is a successful social entrepreneur who employs returning citizens; a mentor; and a public speaker. He is the embodiment of second chances, and this is his unforgettable story.

The Princeton Guide to Historical Research University of Chicago Press

This introductory textbook provides an accessible overview of the key contributions to translation theory. Jeremy Munday explores each theory chapter-by-chapter and tests the different approaches by applying them to texts. The texts discussed are taken from a broad range of languages - English, French, German, Spanish, Italian, Punjabi, Portuguese and English translations are provided. A wide variety of text types are analyzed, including a tourist brochure, a children's cookery book, a Harry Potter novel, the Bible, literary reviews and translators' prefaces, film translation, a technical text and a European Parliament speech. Each chapter includes the following features: a table introducing key concepts an introduction outlining the

translation theory or theories illustrative texts with translations a chapter summary discussion points and exercises. Including a general introduction, an extensive bibliography, and websites for further information, this is a practical, user-friendly textbook that gives a balanced and comprehensive insight into translation studies.

The Christianity Reader SAGE Publications

Through a dual engagement with the unconscious in psychoanalysis and Islamic theological-medical reasoning, Stefania Pandolfo's unsettling and innovative book reflects on the maladies of the soul at a time of tremendous global upheaval. Drawing on in-depth historical research and testimonies of contemporary patients and therapists in Morocco, *Knot of the Soul* offers both an ethnographic journey through madness and contemporary formations of despair and a philosophical and theological exploration of the vicissitudes of the soul. *Knot of the Soul* moves from the experience of psychosis in psychiatric hospitals, to the visionary torments of the soul in poor urban neighborhoods, to the melancholy and religious imaginary of undocumented migration, culminating in the liturgical stage of the Qur'anic cure. Demonstrating how contemporary Islamic cures for madness address some of the core preoccupations of the psychoanalytic approach, she reveals how a religious and ethical relation to the "ordeal" of madness might actually allow for spiritual transformation. This sophisticated and evocative work illuminates new dimensions of psychoanalysis and the ethical imagination while also sensitively examining the collective psychic strife that so many communities endure today.

American Judaism University of Chicago Press

In this volume, Jacob Lassner examines the triangular relationship that during the Middle Ages defined - and continues to define today - the political and cultural interaction among the three Abrahamic faiths.

Suggestions to Medical Authors and A.M.A. Style Book University of Chicago Press

"An indispensable companion text, *Texts and Traditions* includes the essential documents of the various religious trends of the Second Temple and Rabbinic periods as well as Josephus, Greek and Aramaic inscriptions, classical historians and talmudic sources." --Book Jacket.

The Literature Review University of Chicago Press

A collection of essays dealing with the Neo-Assyrian Empire.

Essays include historical and literary studies using various textual and pictographic sources, as well as discussions of the philological or historiographical problems of royal inscriptions with some connection to archaeology.

Sundays at Sinai Princeton University Press

This is a collection of ancient Near Eastern texts relevant to the study of the Old Testament. The texts have been selected from the vast body of written materials in many different languages and in a variety of media from the ancient Near East (including Egypt) from the third millennium bce to the turn of the era.

Sources for the History of the School of Nisibis "O'Reilly Media, Inc."

The Reader in the Book is concerned with a particular aspect of the history of the book, an archeology and sociology of the use of margins and other blank spaces. One of the most commonplace aspects of old books is the fact that people wrote in them,

something that, until very recently, has infuriated modern collectors and librarians. But these inscriptions constitute a significant dimension of the book's history, and what readers did to books often added to their value. Sometimes marks in books have no relation to the subject of the book, merely names, dates, prices paid; blank spaces were used for pen trials and doing sums, and flyleaves are occasionally the repository of records of various kinds. The Reader in the Book deals with that special class of books in which the text and marginalia are in intense communication with each other, in which reading constitutes an active and sometimes adversarial engagement with the book. The major examples are works that are either classics or were classics in their own time; but they are seen here as contemporaries read them, without the benefit of centuries of commentary and critical guidance. The underlying question is at what point marginalia, the legible incorporation of the work of reading into the text of the book, became a way of defacing it rather than of increasing its value-why did we want books to lose their history?

Textual Sources for the Study of Hinduism Bloomsbury Publishing

This seven-volume set offers a core collection of hand-selected titles in 58 curriculum-specific subject areas. Volumes are organized into broad subject areas such as Humanities, Languages and Literature, History, Social Sciences and Professional Studies, Science and Technology, and Interdisciplinary and Area Studies. The seventh volume provides helpful cross-referencing indexes which explain the relationship between RCL subject taxonomy and LC ranges. New to this edition are the inclusion of interdisciplinary subject areas and the

selection of electronic resources and web sites essential for undergraduate library collections. Non-book selections will be easily identified by a graphic indicator included in the item record. All selections will be assigned an audience level marker indicating whether the title is most appropriate for lower-division undergraduate, upper-division undergraduate, faculty, or general readership. Records will also include a notation if they previously appeared in BCL3 (Books for College Libraries, 1988) or have been reviewed by Choice.

Jews, Christians, and the Abode of Islam University of Chicago Press

Christianity is the world's most populous religion, with some two billion adherents. As a world religion, Christianity has flourished because it is capable of taking on new forms in new contexts. To understand both the religion's history and its present state, Mary Gerhart and Fabian Udoh gather original texts—from early Christian writings to contemporary documents on church-related issues—in *The Christianity Reader*. The most comprehensive anthology of Christian texts ever in English, this is a landmark sourcebook for the study of Christianity's historical diversity. With newly edited, annotated, and translated primary texts, along with supplemental analytical essays, the volume allows Christianity, at long last, to speak in its many voices. Focusing on Christianity as a religion, Gerhart and Udoh select texts that illuminate issues such as theology, mysticism, and ritual, while also articulating the stories of previously marginalized groups, as well as those in new and growing epicenters of the religion. With nearly three hundred selections, the texts encompass the entire history of Christian writings excluding the New Testament, from Justin Martyr and

Tertullian to Fabien Eboussi Boulaga and Teresa of Calcutta. Eight thematic sections cover biblical traditions and interpretations; early influences; nascent forms; patterns of worship; structures of community; philosophy, theology, and mysticism; twentieth-century issues and challenges; and the contemporary relationship between Christianity and other world religions. The Reader's contents are arranged chronologically and are supported with introductions and source notes that explain the rationale for their inclusion and their context. Providing a far richer selection than ever before available in a single volume, *The Christianity Reader* will be welcomed as both a classroom resource and a work of reference for decades to come.

Texts and Traditions KTAV Publishing House, Inc.

An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. "Written by three experts in the field, *Deep Learning* is the only comprehensive book on the subject." —Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant

concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives,

covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. A website offers supplementary material for both readers and instructors.
