Gender discrimination pervades nearly all legal institutions and practices in Latin America. The deeper question is how this shapes broader relations of power. By examining the relationship between law and gender as it manifests itself in the Mexican legal system, the thirteen essays in this volume show how law is produced by, but also perpetuates, unequal power relations. At the same time, however, authors show how law is often malleable and can provide spaces for negotiation and redress. The contributors (including political scientists, sociologists, geographers, anthropologists, and economists) explore these issues—not only in courts, police stations, and prisons, but also in rural organizations, indigenous communities, and families. By bringing new interdisciplinary perspectives to issues such as the quality of citizenship and the rule of law in present-day Mexico, this book raises important issues for research on the relationship between law and gender more widely.

Lexicon of Geologic Names of the United States (including Alaska). Rutgers University Press

Contains scholarly evaluations of books and book chapters as well as conference papers and articles published worldwide in the field of Latin American studies. Covers social sciences and the humanities in alternate years.

Geological Survey Professional Paper UNC Press Books

Includes Part 1, Number 2: Books and Pamphlets, Including Serials and Contributions to Periodicals July - December)

Mineral Springs Resorts in Global Perspective Springer Nature

Issue identified as 1935 covers names used through Dec. 1935.

Means provides the first major study of both the historical development of private law in a Latin

American country and the shifting role of business corporations or share companies in Latin American development. He shows that Colombia's corporate law provisions for commercial codes held only a tenuous relationship to reality and that, even today, Colombia's commercial development continues to be affected by a paucity of legal scholars, case reports, and legal journals. *List of Publications* Copyright Office, Library of Congress

This book presents the theoretical and experimental foundations of quasi-static deformation of elastoplastic and viscoplastic materials and structural elements made of them. Experimental studies of deformation and fracture of materials under complex loading under impulse influences are described and discussed. A short introduction of theoretical and numerical methods for studying the stress-strain state of elastoplastic structural elements under dynamic, impulse loading and their interaction with other media is given.

Analyses of Natural Gases, 1917-80

Spa resorts were a favoured destination for affluent seekers after health and comfortable leisure in opulent surroundings from the seventeenth to the twentieth century, although in the railway age they began to suffer from competition from new fashions in leisure and tourism, especially the seaside holiday. During their heyday the leading spa resorts became hotbeds of political and diplomatic intrigue, and gathering-points for high society. As such, they also became important businesses, and distinctive, carefully-managed urban environments. 'Taking the waters' at a mineral springs resort fell into eclipse over much of the Western world in the mid-twentieth century, only to revive in more diffuse guise as 'health and wellness tourism' in the new millennium. This book examines an important body of practices and experiences from the perspectives of health, pleasure, conspicuous consumption and display, urban governance, culture and politics across a quarter of a millennium, drawing its examples not only from the British Isles, France, Spain and Central Europe, but also from the United States and Australia. An international team of distinguished historians puts this neglected theme back on the historical map, at a time when spas and their treatments have never been so popular and visible in contemporary society. This book was published as a special issue of the *Journal of Tourism History*.

The American Catalogue

Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries.

Catalog of Copyright Entries. Third Series

This book presents recent advances in the physics of magnetic reconnection, investigated via both in situ spacecraft observations and fully kinetic numerical simulations. Magnetic reconnection is a fundamental process in plasma physics during which the topological reconfiguration of the magnetic field leads to energy conversion and particle energization. The book focuses on the physics of the electron diffusion region (EDR), a crucial region where the electrons are decoupled from the magnetic field and efficiently accelerated by the electric field. By using recent, high-resolution measurements provided by NASA's Magnetospheric MultiScale Mission (MMS), the book investigates

the structure of the EDR at the Earth's magnetopause. The presented analysis provides evidence for an inhomogeneous and patchy EDR structure. The structure of the EDR appears to be more complex than the in laminar picture suggested by previous observations and simulations. Then, electrons dynamics in the EDR is studied using a novel, fully kinetic Eulerian Vlasov-Darwin model that has been implemented in the Vlasov-Darwin numerical code (ViDA), explained in detail in the book. Lastly, the book covers the testing of this new code, and investigates the contributions of the different terms in the generalized Ohm's law within the EDR, highlighting the role of the electron inertia term.
