Les médecins praticiens trouveront dans cet ouvrage l'essentiel de ce qu'il faut savoir pour prescrire avec succès des médicaments homéopathiques. Organisé comme une "fusée à trois étages" ce livre s'adresse : - au médecin intéressé par l'homéopathie sans la connaître vraiment et qui, avant d'aller plus loin, veut s'essayer à quelques prescriptions ; - au médecin qui, voulant acquérir l'essentiel de la méthode, a besoin de connaître les principaux médicaments homéopathiques afin de fonder ses prescriptions sur des symptômes fiables ; - au médecin homéopathe confirmé qui recherche un éventail plus large de médicaments ou des arguments supplémentaires pour prescrire les médicaments qu'il connaît déjà. Le lecteur pourra aisément passer du premier stade au second, puis au troisième, au fur et à mesure de sa réflexion et de son expérience, et suivre ainsi un processus de perfectionnement dans l'acquisition de ses connaissances. Ce livre, didactique et d'accès facile, l'accompagnera tout au long de sa carrière. Pour chaque maladie (350 en tout), les trois étapes sont clairement identifiables grâce à une présentation typographique particulière, ce qui permet une consultation rapide et progressive de l'ouvrage. Ce livre pratique est l'outil indispensable au médecin qui souhaite prescrire de l'homéopathie. Pour chaque pathologie, le praticien trouvera : les repères clinique, une ordonnance-type, l'essentiel pour la prescription courante et

des indications pour une prescription élargie.

Urogynecology and Reconstructive Pelvic Surgery E-Book John Wiley & Sons

The fifth volume in Dr. Jonathan Berek's bestselling series, *Operative Techniques in Obstetric Surgery* provides superbly illustrated, authoritative guidance on operative techniques along with a thorough understanding of how to select the best procedure, how to avoid complications, and what outcomes to expect. Easy to follow, up to date, and highly visual, this step-by-step reference edited by Drs. Michael A. Belfort, Alireza A. Shamshirsaz, Steven L. Clark, and Karin A. Fox covers the most common operations in obstetrics and is ideal for residents and physicians in daily practice. Succinct text, bulleted points, and quick-reference tables allow you to review information quickly and understand best practices and potential problems for each procedure. Hundreds of full-color intraoperative photographs and drawings, as well as more than 20 high-quality videos, capture procedures step by step and help you immediately apply your knowledge. Each clinical problem is discussed in the same templated format: general principles, anatomy and differential diagnosis, imaging and other diagnostics, preoperative planning, surgical management, procedures and techniques, pearls and pitfalls, postoperative care, outcomes, and complications. Coverage includes Cesarean delivery, management of postpartum hemorrhage including hysterectomy for placenta accreta spectrum, operative vaginal delivery and repair of lacerations, obstetric fistula repair, and more. Perfect for a quick preoperative review of the steps of a procedure. Volume editors and contributors are thought leaders in their respective subspecialties and are known for their surgical expertise. Beyond Training examines the nature of second language teacher development and how teachers' practices are influenced by their beliefs and principles. It seeks to move discussion of language teacher development beyond the level of "training," which reflects a technical view of specific teaching practices. Instead, it takes a more holistic approach to teacher development built on the notion of the teacher as critical and reflective thinker. The argument pursued throughout is that teacher education needs to engage teachers not merely in the mastery of techniques, but in an exploration of the knowledge, beliefs, and attitudes that underly their teaching practices.

This book provides a multi-disciplinary coverage of the broad fields of species, community and landscape conservation. The panel of contributors consider a range of topics in vegetation and biodiversity assessment, planning and management of conservation zones and protected areas, together with historical and social/legal issues of the environment and nature conservation. The book celebrates the life's work of Professor Franco Pedrotti.

Central Nervous System Tumours: Who Classification of Tumours Elsevier Health Sciences

This book describes the fundamentals of three-dimensional (3D) printing, addresses the practical aspects of establishing a 3D printing service in a medical facility, and explains the enormous potential value of rendering images as 3D printed models capable of providing tactile feedback and tangible information on both anatomic and pathologic states. Individual chapters also focus on selected areas of applications for 3D printing, including musculoskeletal, craniomaxillofacial, cardiovascular, and neurosurgery applications. Challenges and opportunities related to training, materials and equipment, and guidelines are addressed, and the overall costs of a 3D printing lab and the balancing of these costs against clinical benefits are discussed. Radiologists, surgeons, and other physicians will find this book to be a rich source of information on the practicalities and expanding medical applications of 3D printing.

Bluetongue in Northern Europe Walter de Gruyter GmbH & Co KG

Bluetongue (BT) is an infectious, viral and vector-borne disease of improved breeds of sheep and some species of deer that is of major international importance. The infection is usually unapparent in cattle, which acts as reservoir for the virus. However, some serotypes such as serotype 8 (BTV-8), which recently caused a severe epizootic of BT in northern Europe, exhibit a more important virulence in cattle. Consequently, the redaction of a scientific booklet describing Bluetongue is of great utility for veterinarians and animal health professionals in the framework of an early detection of Bluetongue and other emerging diseases.

The latest edition of the essential text and professional reference, with substantial new material on such topics as vEB trees, multithreaded algorithms, dynamic programming, and edge-based flow. Some books on algorithms are rigorous but incomplete; others cover masses of material but lack rigor. Introduction to Algorithms uniquely combines rigor and comprehensiveness. The book covers a broad range of algorithms in depth, yet makes their design and analysis accessible to all levels of readers. Each chapter is relatively self-contained and can be used as a unit of study. The algorithms are described in English and in a pseudocode designed to be readable by anyone who has done a little programming. The explanations have been kept elementary without sacrificing depth of coverage or mathematical rigor. The first edition became a widely used text in universities

worldwide as well as the standard reference for professionals. The second edition featured new chapters on the role of algorithms, probabilistic analysis and randomized algorithms, and linear programming. The third edition has been revised and updated throughout. It includes two completely new chapters, on van Emde Boas trees and multithreaded algorithms, substantial additions to the chapter on recurrence (now called "Divide-and-Conquer"), and an appendix on matrices. It features improved treatment of dynamic programming and greedy algorithms and a new notion of edge-based flow in the material on flow networks. Many exercises and problems have been added for this edition. The international paperback edition is no longer available; the hardcover is available worldwide.

Beyond Training WHO Regional Office Europe

Based on the experience of many countries in the WHO European Region and the advice of experts, this guide outlines some of the steps prison systems should take to reduce the public health risks from compulsory detention in often unhealthy situations, to care for prisoners in need and to promote the health of prisoners and prison staff. This requires that everyone working in prisons understand how imprisonment affects health, what prisoners' health needs are, and how evidence-based health services can be provided for everyone needing treatment, care and prevention in prison. Other essential elements are being aware of and accepting internationally recommended standards for prison health; providing professional care with the same adherence to professional ethics as in other health services; and, while seeing individual needs as the central feature of the care provided, promoting a whole-prison approach to care and promoting the health and well-being of people in custody.

Approaching high-volume spay and neuter as a separate discipline, this comprehensive reference addresses the unique challenges of this branch of shelter medicine. You will learn how to become faster at performing these procedures in a variety of settings, while still maintaining the safety of the patient. Safety is emphasized throughout with guidance on how to best treat patients with unknown medical histories and financial constraints that restrict the ability to do pre-anesthetic blood work. Special attention is given to considerations about surgical technique, as well as topics such as suture selection and size, suture pattern, patient order, medications, and aftercare. Coverage of mobile veterinary services examines how to provide low-cost spay and neuter to underserved communities with this emerging trend in the industry. - Comprehensive coverage examines the "hows" and "whys" of the mechanics of high-volume spay/neuter, as well as how to manage complications that can occur. - Written by Victoria Valdez, an experienced veterinarian who has performed more than 40,000 spays and neuters. - Information on how to set up both a mobile and a stationary suite offers guidance for providing low-cost spay and neuter services in a variety of settings. - Easy-to-read reference manual format ensures each chapter includes all pertinent information on a topic, eliminating the need to cross-reference throughout the book. - Enhanced eBook on Expert Consult offers a fully searchable version of the text.

"The Hidden Patients" looks at questions of gender in psychiatric publications on the colonial Maghreb, which described "normal" and "abnormal" forms of behaviour among the colonised and compared these findings to descriptions of Europeans who had been diagnosed with psychiatric "abnormalities". Many psychiatric experts claimed that Muslim women rarely went "mad" and that they only accounted for a negligible percentage of the patients cared for by colonial psychiatrists. Consequently, relatively little space was dedicated to female Muslim patients in the theoretical source material, even though case studies and statistics clearly showed that it was mainly an imaginary absence and that it contradicted the everyday experiences of the psychiatrists.
