Recent archaeological discoveries from China and central Asia have changed our understanding of how human civilization developed in the period of some 4 million years before the start of written history. In this new edition of his Very Short Introduction, Chris Gosden explores the current theories on the ebb and flow of human cultural variety.

From the early days of the movies, "cavemen" have been a popular subject for filmmakers--not surprisingly, since the birth of cinema occurred only a few decades after the earliest scientific studies of prehistoric man. Filmmakers, however, were not constrained by the emerging science; instead they most often took a comedic look at prehistory, a trend that continued throughout the 20th century. Prehistoric humans also populated adventure-fantasy films, with the original One Million B.C. (1940) leading the charge. Documentaries were also made, but it was not until the 1970s that accurate film accounts of prehistoric humans finally emerged. This exhaustive work provides detailed accounts of 581 film and television productions that feature depictions of human prehistory. Included are dramas and comedies set in human prehistory; documentaries; and films and television shows in which prehistoric people somehow exist in historical periods--from the advent of civilization up to the present--or in extraterrestrial settings. Each entry includes full filmographic data, including year of release, running time, production personnel, cast information, and format. A description of each film provides background on the prehistoric elements. Contemporary critical commentary is included for many of the works.

*Prehistoric Peoples: Life Before Recorded History* Franklin Watts

This volume considers the cultural history of the real South Florida "old-timers" dating from 10,000 B.C. through the invasion by Europeans and analyzes the ways in which they adapted to their environment through time--or caused their environment to adapt to their needs.

Essay from the year 2018 in the subject Cultural Studies - Miscellaneous, grade: 1.8, , language: English, abstract: Focusing primarily on North American developments, this essay discusses what several Native American cultures' practices and lifestyles were like in the Pre-Columbian era, that is, prior to the discovery of the New World by Spanish explorer Christopher Columbus. Many of the cultures mentioned actually disappeared before the 15th century. We shall explore archaeological finds and dig into the Americas' past. Elements of paleontology shall also be delved into as we read about some of the prehistoric fauna that early Indians were familiar. The evolution of the bison is noted as is its significance. However people made it to the Americas, it must have taken a great deal of courage (or stupidity) as well as perseverance. Let us explore the rich and ancient heritage of the Native Americans.

*Man's Unknown Ancestors* Univ of California Press

Based on lectures given at the Conference of the British Summer School of Archaeology at Edinburgh in 1954, this book, published in 1962, surveys the general field of pre-historic Scotland, five archaeologists each contributing chapters discussing the main aspects and problems that have presented themselves in specialised research areas. From the first peopling of the area by human communities with hunting and food-gathering economies, to field antiquities and the introduction of

copper and bronze metallurgy and on to the first settlement by Celtic speakers and the links to the first historically documented Scotland. Contributors: R.J.C. Atkinson, G.E. Daniel, T.G.E. Powell and C.A.R. Radford.

*Prehistoric Man in America* Armadillo

Extending some 1,400 miles from Alaska to northern California, America's Northwest Coast is one of the richest and most distinct cultural areas on earth. The region is famous for its magnificent art--masks, totem poles, woven blankets--produced by the world's most politically and economically complex hunters and gatherers. As this pioneering account shows, the history of settlement on the Northwest Coast stretches back some 11,000 years. With the stabilization of sea levels and salmon runs after 4000 B.C., many of the region's salient features began to emerge. Salmon fishing supported rapid population growth to a peak over 1,000 years ago. The spread of rain forest made available trees such as red cedar that could be turned into vast houses and seaworthy canoes. Large households and permanent villages emerged alongside slavery and a hereditary nobility. Warfare became epidemic, initially hand to hand but later characterized by the development of fortresses and the bow and arrow. Art evolved from simple carvings and geometric designs 5,000 years ago to the specialized crafts of the modern era. Written by noted experts and profusely illustrated, this is an essential reference for scholars and students of Native American archaeology and anthropology as well as travelers to the region.

**Survival by Hunting** Southwater

"Who were the first humans to inhabit North America? According to the now familiar story, mammal hunters entered the continent some 12,000 years ago via a land bridge that spanned the Bering Sea and introduced the distinctive stone tools of the Clovis culture. Drawing from original archaeological analysis, paleoclimatic research, and genetic studies, noted archaeologists Dennis J. Stanford and Bruce A. Bradley challenge that narrative. Their hypothesis places the technological antecedents of Clovis technology in Europe, with the culture of Solutrean people in France and Spain more than 20,000 years ago, and posits that the first Americans crossed the Atlantic by boat and arrived earlier than previously thought."--Back cover.

**Manners and Monuments of Prehistoric Peoples** McFarland

Minnesota's written history goes back only to the 1600s, when the first European visitors recorded the locations of native American populations. The ancestors of those native Americans are Minnesota's prehistoric peoples. Instead of written history, they left a rich record of their existence buried in the earth. Archaeologists study the lives of prehistoric people through careful excavation and analyses of the buried record. This booklet illustrates what they have found and tells what they have learned about Minnesota's prehistory.
