BESTSELLER • One of the most acclaimed books of our time: an unforgettable memoir about a young woman who, kept out of school, leaves her survivalist family and goes on to earn a PhD from Cambridge University "Extraordinary . . . an act of courage and self-invention."—The New York Times NAMED ONE OF THE TEN BEST BOOKS OF THE YEAR BY THE NEW YORK TIMES BOOK REVIEW • ONE OF PRESIDENT BARACK OBAMA'S FAVORITE BOOKS OF THE YEAR • BILL GATES'S HOLIDAY READING LIST • FINALIST: National Book Critics Circle's Award In Autobiography and John Leonard Prize For Best First Book • PEN/Jean Stein Book Award • Los Angeles Times Book Prize Born to survivalists in the mountains of Idaho, Tara Westover was seventeen the first time she set foot in a classroom. Her family was so isolated from mainstream society that there was no one

to ensure the children received an education, and no one to intervene when one of Tara's older brothers became violent. When another brother got himself into college, Tara decided to try a new kind of life. Her quest for knowledge transformed her, taking her over oceans and across continents, to Harvard and to Cambridge University. Only then would she wonder if she'd traveled too far, if there was still a way home. "Beautiful and propulsive . . . Despite the singularity of [Westover's] childhood, the questions her book poses are universal: How much of ourselves should we give to those we love? How to Become a Straight-A Student Ballantine Books

- For the first time in the history of memory books, a purely practical book with advanced super-memory techniques for those fed up with reading about how

amazing super-memory can be and get no benefits at the end...- Ten different exercises that teaches memory systems and simulates how memory champions form mental images for remembering thousands of items in a matter of minutes, each exercise contains practices that target one of the memory systems...- The third level of this book comprises new and exclusive memory systems specialized in helping students to use super-memory for academic success...Note: this book contains over a hundred graphically designed mental images.No matter how old you are, you can remember the way to any school you studied in (Spatial memory). You can remember what your class, classmates, and teachers look like (Visual memory). You also can remember the times where you have been happy and excited or even sad and angry (Emotional memory). Yet somehow, you have forgotten most of the books you spent so much time memorizing!?. Super memory technique is a combination of these proven parts of memory. Spatial memory will arrange your items and prevent overlapping while visual memory is making them stick right away through mental images, and emotional memory will form unforgettable parts in them. Although super memory techniques are easy to learn in general, the only difficulty here is that you have to learn them by practicing and not just reading about them. Fortunately, this book is purely practical. This book teaches super memory through actual and visual designed mental

images. These mental images simulate how memory athletes remember thousands of items in just a few minutes. The start is about warming up and get some initial results. After that, you will read about the concepts behind memory techniques to improve your records even more in the next memory practices.So we are already using our super memory, only we want to know how to use them exactly where we want, as in our daily life like remembering phone numbers, people's names or shopping lists. Plus, memory can be crucial in studying, for instance, learning a new language, medicine, nursing, engineering, history, literature, technology, biochemistry, or any other academic area, in addition to some career like actor scripts, lab value, speeches, poems. about the author: Bassa studied medicine using super memory techniques, which is one of the most information-overloaded majors. According to Bassa, this has not come overnight but through serious attempts and fails. Today, he is the first man to succeed in medical school by using only memory techniques. Bassa said that to use super memory for studying or work, you must think out of the box and not use the exact techniques used in memory championships because studying is different from long, similar, and interchanging items in both structure and constituents. Bassa came up with three new memory systems under the brand name mnemonic symbolism, which have made super memory techniques usable in any field of interest.
