Het recht van de zee, zowel op internationaal als nationaal vlak, is blijvend in evolutie. Naar aanleiding van het emeritaat van professor Eddy Somers, expert in internationaal zee- en maritiem recht, stelden An Cliquet en Frank Maes een uniek liber amicorum samen, met actuele ontwikkelingen in het internationaal zeerecht en het maritiem recht. Een eerste deel handelt over ontwikkelingen in het internationaal zeerecht en gaat in op de toepassing van het Zeerechtverdrag op Arctica, mariene ruimtelijke planning, mariene gebiedsbescherming, mensensmokkel op zee, piraterij, hulp en bijstand. Een tweede

deel gaat in op het maritiem recht en omvat bijdragen inzake beveiliging van Belgische schepen, bewarend beslag op zeeschepen, 'transportfacilitatie', staking in de haven en de regionalisering van de binnenvaart. In een derde deel komen een aantal ruimere maritieme thema's aan bod: de historiek van de breedte van de territoriale zee, havenplanologie in Vlaanderen, scheepsafval en havenontvangstinstallaties, veiligheidsmaatregelen in de havens, samenwerking tussen Vlaanderen en Nederland inzake de Schelde en de estuaire vaart. Het geheel is opgevat als eigentijds handboek, rijk gestoemd voor iedereen met interesse in de zee en het zeerecht, voor academici en mensen in de praktijk! Met bijdragen van Erik Franckx, Fanny Douvere, Frank Maes, An Cliquet, Jasmine Coppens, Klaas Willaert, Gwen Gonsaeles, Walter P. Verstrepen,

MacKenzie demonstrates that ICAO has assumed a leading role in the struggle to secure civil aviation against sabotage and hijacking, while providing a forum for international concerns and disputes.

Air cargo is a key element of the global supply chain. It allows outsourcing of manufacturing to other countries and links production in both multinational and smaller enterprises. It has also been the most important driver of certain export industries in countries such as South Africa, Kenya and Chile. As a component of the air transport industry, air cargo makes the crucial difference between profit and loss on many long-haul routes. This second edition of *Moving Boxes by Air* offers a comprehensive and up-to-date guide to the business and practices of air cargo, with chapters dedicated to key issues such as current trends, market characteristics, regulation, airport terminal operations, pricing and revenues, and environmental impacts. The book illustrates the recent emphasis on mergers at the expense of alliances, which have not had the impact that they had on passenger operations. The section on security has been expanded to assess in more depth the threats to aircraft from terrorists, particularly in the lower cargo and passenger baggage compartments. Surcharges are examined and the book considers whether all airlines will follow the lead of some to do

away with both fuel and security surcharges. The book concludes with a summary of the latest industry forecasts. Fully updated throughout, this edition is the definitive guide to air cargo for professionals within both the aviation and freight industries.

Derived from the renowned multi-volume International Encyclopaedia of Laws, this practical analysis of the structure, competence, and management of International Civil Aviation Organization (ICAO) provides substantial and readily accessible information for lawyers, academics, and policymakers likely to have dealings with its activities and data. No other book gives such a clear, uncomplicated description of the organization's role, its rules and how they are applied, its place in the framework of international law, or its relations with other organizations. The monograph proceeds logically from the organization's genesis and historical development to the structure of its membership, its various organs and their mandates, its role in intergovernmental cooperation, and its interaction with decisions taken at the national level. Its competence, its financial management, and the nature and applicability of its data and publications are fully described. Systematic in presentation, this valuable time-saving resource offers the quickest, easiest way to acquire a sound understanding of the workings of International Civil Aviation Organization (ICAO) for all interested parties. Students and teachers of international law will find it especially valuable as an essential component of the rapidly growing and changing global legal milieu.

Since the 1950s, a number of specialized books dealing with human factors has been published, but very little in aviation. *Human Factors in Aviation* is the first comprehensive review of contemporary applications of human factors research to aviation.

A "must" for aviation professionals, equipment and systems designers, pilots, and managers--with emphasis on definition and solution of specific problems. General areas of human cognition and perception, systems theory, and safety are approached through specific topics in aviation--behavioral analysis of pilot performance, cockpit automation, advancing display and control technology, and training methods.

Every ten years ICAO holds a worldwide air transport conference. The most recent such event - the 6th Worldwide Air Transport Conference (ATConf/6) - was held in Montreal from 18 to 22 March 2013. The questions posed by this book are: are the "clerical and administrative tasks" for ICAO which were decided on by ATConf/6 (and other preceding conferences) sufficient to meet the needs of the people of the world for safe, regular, economical and efficient air transport? Should ICAO not think outside of its 67-year-old box and become a beacon to air transport regulators? In other words, shouldn't the bottom line of ICAO's meaning and purpose in the field of air transport be to analyze trends and guide the air transport industry instead of continuing to merely act as a forum for global practitioners to gather and update information on their respective countries' policies for air transport? Shouldn't ICAO provide direction, as do other agencies of the United Nations? This book addresses ICAO's inability, unlike most other specialized agencies in their missions, to make a tangible difference in air transport development, through a discussion of key issues affecting the air transport industry. It also inquires into the future of air transport regulation.

This book is both a repertory guide to the Convention on International Civil Aviation (Chicago Convention) as well as a legal analysis of the provisions of the treaty. It traces action taken by the ICAO Assembly and the Council in the implementation of the Convention from the first ICAO Assembly in 1947 until 2012. Above all, the book offers a commentary on the functional and moral fabric of the Chicago Convention, which is not only a multilateral legal instrument that sets out basic principles of air navigation and air transport, but also serves as a

moral compass that brings the people of the world together. The teleological nature of the Chicago Convention is reflected from the outset – from its Preamble which sets the tone and philosophy of the Convention – that aviation builds friendship and understanding among all people, to its technical provisions that range from rules of the air to landing at airports and customs and immigration procedures. The book effectively demonstrates the Aristotelian principle – that rules make people good by forming habits in them. Standardization, or in other words, compliance, is the driver of the Convention that keeps aviation safe, regular, efficient and economical. To that end, this book traces and details the sustained relevance of the Chicago Convention and the efforts of ICAO and the international aviation community towards keeping air transport on track and ready for its future exponential growth, both in letter and in spirit.

The Principles of Integrated Technology in Avionics Systems describes how integration can improve flight operations, enhance system processing efficiency and equip resource integration. The title provides systematic coverage of avionics system architecture and ground system integration. Looking beyond hardware resource sharing alone, it guides the reader through the benefits and scope of a modern integrated avionics system. Integrated technology enhances the performance of organizations by improving system capacity and boosting efficiency. Avionics systems are the functional center of aircraft systems. System integration technology plays a vital role in the complex world of avionics and an integrated avionics system will fully-address systems, information and processes. - Introduces

integration technology in complex avionics systems - Guides the reader through the scope and benefits of avionic system integration - Gives practical guidance on using integration to optimize an avionics system - Describes the basis of avionics system architecture and ground system integration - Presents modern avionics as a system that is becoming increasingly integrated

This document describes the latest methods and procedures for disinsection of internal areas of passenger, military and cargo aircraft to prevent international transport of mosquito vectors of human diseases and protect aircraft passengers and airline crew. It provides updates on insecticide application methods and equipment, physical requirements of aerosol and residual sprays, and revised calculation tables for aerosol spray amounts required, as well as updated examples of pre-embarkation and pre-departure cabin treatment and certification requirements of the International Civil Aviation Organization (ICAO). It is intended for use by Member States and stakeholders (e.g. airlines, airport authorities, members of the International Air Transport Association, ICAO, pesticide manufacturers and pesticide regulatory agencies). Countries that are in liaison with the departure country should observe the requirements for disinsection of arriving aircraft, taking into consideration various

risk factors described in the document. The regulatory aspects of approval of products for aircraft disinsection and occupational risk assessment are beyond the scope of the document. Separate guidance is available for surveillance and control of vectors in and around airport premises. Although the prevention of importation of agricultural pests is beyond the scope of this document, many countries may require aircraft disinsection for this purpose.

Convention on International Civil Aviation Springer Nature
From early 2020 for a period of two years at the end of which this book was written, air transport suffered unprecedented setbacks due to the COVID-19 pandemic. Although the pandemic may eventually fizzle out into another flu like occurrence, the restraint with which air transport services were offered would remain with us for a while with some practices being sustained, particularly those pertaining to public health. One of the main areas of air transport that was and will be affected significantly by the changed circumstances - is facilitation - a subject that is regulated by the Chicago Convention of 1944 and its Annex 9. This book looks in depth at the Annex as it will be applied in a post pandemic world, against its legal, socio-political, and economic impacts, addressing the Standards of the Annex on clearance of aircraft; entry and departure of passengers; and the carriage of cargo. It also discusses some critical aviation events in 2020 and 2021 that occurred as they relate to facilitation of air transport. Some of the key areas discussed are the role of ICAO; issues of public health as they relate to air transport; security of travel documents; smuggling of persons; digital technology and rights of the passenger; unruly passengers; carriage of disabled

passengers; relief flights and repatriation flights; and facilities at airports.

This book explores the legal and regulatory aspects of the complex air cargo sector, discussing in detail the general principles of the carriage of air cargo; artificial intelligence and air cargo; facilitation; carriage of hazardous goods; human remains; and animals, as well as cargo security; price fixing and anti competitive conduct in air cargo operations; liability issues; the air cargo supply chain and contract of carriage. It also discusses related achievements of the International Civil Aviation Organization; the International Air Transport Association and Airports Council International. The value of goods carried by airlines represents 7.4% of the global Gross Domestic Product. While cargo carried by air accounts for less than 1% of global cargo carriage, airlines carry 35% of the value of world trade,

making this industry highly valuable and efficient, and the most reliable way to transport goods throughout the world. On average, airlines transport 52 million metric tons of goods per annum, worth an equivalent of \$6.8 trillion, i.e. \$18.6 billion worth of goods daily.
