Japanese Auto Transplants in the Heartland IntraWEB, LLC and Claitor's Law Publishing

The idea for this book was formed during the early 1980s when the author was studying the impact of plant closings on displaced workers and communities. In one community, workers who were displaced by a plant closing expected to receive retraining funds through the Job Training and Partnership Act (JTPA), only

to find that the state had committed all the JTPA funds to train new workers for a Japanese transplant. Soon it became apparent that deindustrialization, job loss, and economically depressed communities were linked with the escalating interstate competition to provide multi-million dollar incentive packages for businesses to settle in their state. When Japanese automobile companies considered coming to the United States, they fueled the interstate competition for these large projects, which promised thousands of jobs and economic growth.

NAMED ONE OF THE BEST COOKBOOKS OF THE YEAR BY BUZZFEED As anyone who has hosted a dinner party knows, cocktail hour is the most fun part of the evening for guests—but the most stressful for whomever is in charge of keeping the

drinks flowing. The solution, though, is simple: batch it! In this fun collection, Maggie Hoffman offers 65 delicious and creative cocktails that you don't have to stir or shake to order; rather, they are designed to stay fresh when made ahead and served out of a pitcher. Recipes such as Tongue in Cheek (gin, Meyer lemon, thyme, Cocchi Rosa), Friendly Fires (mezcal, chile vodka, watermelon, lime), Birds & Bees Punch (rum, cucumber, green tea, lemon), and even alcohol-free options are organized by flavor profile—herbal, boozy, bitter, fruity and tart, and so on—to make choosing and whipping up a perfect pitcher of cocktails a total breeze.

This book presents essential research on a class of environmentally friendly alkylphosphonate herbicides. This class of herbicides acted as a competitive inhibitor of the pyruvate dehydrogenase complex (PDHc) to control weeds. The bioreasoning and systematic approach, from basic research to field tests of candidate compounds, are introduced. The basic research covers the molecular design, chemical synthesis, biological activities evaluation, structure-activity relationship analysis and structural optimization. Subsequently, the book reviews the biochemistry of PDHc inhibitors, the selectivity between mammals and plants, and the mechanism of herbicidal activity of novel alkylphosphonates as selective PDHc inhibitors. Field trials for selected alkylphosphonate candidates as herbicides are also included. This book provides a sound basis for the rational design and development of novel herbicides as effective PDHc inhibitors with good enzyme-selective inhibition of plant PDHc between mammals and

plants. These studies take full advantages of the low toxicity and low residual impact of selective PHDc inhibitors to design an effective and environmentally friendly herbicide. This book is based on twenty years of research on alkylphosphonates and phosphorus-containing PDHc inhibitors, and demonstrates how to develop these PDHc inhibitors as an effective and “green” herbicide candidate.
