This overview of project finance for the oil and gas industry covers financial markets, sources and providers of finance, financial structures, and capital raising processes. About US\$300 billion of project finance debt is raised annually across several capital intensive sectors—including oil and gas, energy, infrastructure, and mining—and the oil and gas industry represents around 30% of the global project finance market. With over 25 year's project finance experience in international banking and industry, author Robert Clews explores project finance techniques and their effectiveness in the petroleum industry. He highlights the petroleum industry players, risks, economics, and commercial/legal arrangements. With petroleum industry projects representing amongst the largest industrial activities in the world, this book ties together concepts and tools through real examples and aims to ensure that project finance will continue to play a central role in bringing together investors and lenders to finance these ventures. - Combines the theory and practice of raising long-term funding for capital intensive projects with insights about the appeal of project finance to the international oil and gas industry - Includes case studies and examples covering projects in the Arctic, East Africa, Latin America, North America, and Australia - Emphasizes the full downstream value chain of the industry instead of limiting itself to upstream and pipeline project financing - Highlights petroleum industry players, risks, economics, and commercial and legal arrangements

We are only in the early stages of a broader revolution that will impact every aspect of the global economy, including commerce and government services. Coming financial technology innovations could improve the quality of life for all people. Over the past few decades, digital technology has transformed finance. Financial technology (fintech) has enabled more people with fewer resources, in more places around the world, to take advantage of banking, insurance, credit, investment, and other financial services. Marion Laboure and Nicolas Deffrennes argue that these changes are only the tip of the iceberg. A much broader revolution is under way that, if steered correctly, will lead to huge and beneficial social change. The authors describe the genesis of recent financial innovations and how they have helped consumers in rich and poor countries alike by reducing costs, increasing accessibility, and improving convenience and

efficiency. They connect the dots between early innovations in financial services and the wider revolution unfolding today. Changes may disrupt traditional financial services, especially banking, but they may also help us address major social challenges: opening new career paths for millennials, transforming government services, and expanding the gig economy in developed markets. Fintech could lead to economic infrastructure developments in rural areas and could facilitate emerging social security and healthcare systems in developing countries. The authors make this case with a rich combination of economic theory and case studies, including microanalyses of the effects of fintech innovations on individuals, as well as macroeconomic perspectives on fintech's impact on societies. While celebrating fintech's achievements to date, Laboure and Deffrennes also make recommendations for overcoming the obstacles that remain. The stakes--improved quality of life for all people--could not be higher.

Transformation programs are an increasing feature of global companies carrying out major change projects with high strategic relevance. These programs combine business and technical content bringing together management and information systems. Regardless of their form, they can deliver real benefits to an organization's bottom line. On the other hand, however, one needs to remember that such complex endeavours are always affiliated with extensive interventions within the organization's business model, organizational structure, business processes, and enterprise architecture. Not every organization is aware that this kind of interferences has also a significant influence on the corporate vision, strategy, culture, values, and even the entire value chain - elements on which an organization's long-term success strongly depends. Despite the frequency and major significance of such transformations, managers rate the competencies of their companies rather poorly in this respect. Consequently, the success rate of business transformation projects is correspondingly low. Since 2011, the Business Transformation Academy (BTA), an interdisciplinary think tank for the topic of business transformation management, has been publishing related articles and case studies in its quarterly journal '360° - the Business Transformation Journal'. The core focus of BTA's publications lies in the creation of knowledge on how to manage challenging business transformation projects. Every publication describes and explains the fundamental issues that plague business transformation programs, as well as the strategies which organizations should embrace to overcome them. Using a variety of case studies including: Allianz SE, Shell, SAP, Vodafone, and Mercedes-Benz, this book provides

unprecedented insights into characteristics of current transformation programs and the potential that can be leveraged by applying a holistic transformation management approach. In this book, the BTA has selected only its most essential readings. Each article and case study includes timeless advice that will be relevant regardless of the ever-changing business environment.
