As more people become concerned with food safety as well as the environment, vegetable gardening offers an opportunity to grow produce at home. Not everyone has the time, money, or energy to take on the challenge of starting a vegetable garden, however. In *Circle Gardening*, Kenneth E. Spaeth Jr., a soil and ecosystem specialist, provides a fresh approach and thorough guide to vegetable gardening for all gardeners, experienced and beginner alike. Through years of experimentation, Spaeth has found circle gardening, an ancient method "as old as agriculture," to be not only an efficient but also an aesthetically pleasing way to grow plants. By arranging them in a concentrated circle rather than in rows, gardeners are able to conserve compost, fertilizer, and water. Depending on the number of vegetables planted, this design can save time and be less physically demanding. The rationale for planting your veggies in a circle is scientific, too—many plants clump together in nature and thrive in groups, and so planting in circles actually mimics natural plant distribution. There are other questions that befuddle expert and beginner gardeners, too: What is the difference between organic and conventional gardening? Are there significant pros and cons to each? What makes up the soil in a garden? Spaeth provides clear answers to these complex questions. The book also includes quick vegetable guides in the back along with information on composting, calculating fertilizer rates, and gauging soil health.

"With the twinned calamities of climate change and mass extinction weighing heavier and heavier on my nature-besotted soul, here were concrete, affordable actions that I could take, that anyone could take, to help our wild neighbors thrive in the built human environment. And it all starts with nothing more than a seed. Bringing Nature Home is a miracle: a book that summons butterflies." —Margaret Renkl, The Washington Post As development and habitat destruction accelerate, there are increasing pressures on wildlife populations. In his groundbreaking book *Bringing Nature Home*, Douglas W. Tallamy reveals the unbreakable link between native plant species and native wildlife—native insects cannot, or will not, eat alien plants. When native plants disappear, the insects disappear, impoverishing the food source for birds and other animals. Luckily, there is an important and simple step we can all take to help reverse this alarming trend: everyone with access to a patch of earth can make a significant contribution toward sustaining biodiversity by simply choosing native plants. By acting on Douglas Tallamy's practical and achievable recommendations, we can all make a difference.

The Less Is More Garden Your Money Map

In a time of climate change and mass extinction, how we garden matters more than ever: "An outstanding and deeply passionate book." —Marc Bekoff, author of *The Emotional Lives of Animals* Plenty of books tell home gardeners and professional landscape designers how to garden sustainably, what plants to use, and what resources to explore. Yet few examine why our urban wildlife gardens matter so much—not just for ourselves, but for the larger human and animal communities. Our landscapes push aside wildlife and in turn diminish our genetically programmed love for wildness. How can we get ourselves back into balance through gardens, to speak life's language and learn from other species? Benjamin Vogt addresses why we need a new garden ethic, and why we urgently need wildness in our daily lives—lives sequestered in buildings surrounded by monocultures of lawn and concrete that significantly harm our physical and mental health. He examines the psychological issues around climate change and mass extinction as a way to understand how we are short-circuiting our response to global crises, especially by not growing native plants in our gardens. Simply put, environmentalism is not political; it's social justice for all species marginalized today and for those facing extinction tomorrow. By thinking deeply and honestly about our built landscapes, we can create a compassionate activism that connects us more profoundly to nature and to one another.

In *Gardens of the Roman Empire*, the pioneering archaeologist Wilhelmina F. Jashemski sets out to examine the role of ancient Roman gardens in daily life throughout the empire. This study, therefore, includes for the first time, archaeological, literary, and artistic evidence about ancient Roman gardens across the entire Roman Empire from Britain to Arabia. Through well-illustrated essays by leading scholars in the field, various types of gardens are examined, from how Romans actually created their gardens to the experience of gardens as revealed in literature and art. Demonstrating the central role and value of gardens in Roman civilization, Jashemski and a distinguished, international team of contributors have created a landmark reference work that will serve as the foundation for future scholarship on this topic.
