The result of a federally-mandated study to evaluate the streamlined inspection systems now in place at cattle slaughter plants throughout the US, this volume compares the streamlined system to the traditional cattle inspection system; recounts on-site reviews of two high-volume plants; surveys

procedures for monitoring chemicals and pathogens in carcasses; and evaluates the overall efficacy of the streamlined system in protecting the

public's health. Annotation copyrighted by Book News, Inc., Portland, OR

The livestock sector of China today is barely recognizable to that of two decades ago. The enormous change and growth of the industry will continue to have profound effects both within China and internationally. Understanding China's livestock revolution requires an in-depth study of the forces at work in the market, policy, institutional and agribusiness environment in rural China. This is achieved through an investigation of the emerging and especially intriguing sheep meat industry. The authors also draw upon their extensive field work based research on other livestock industries in China over the last two decades to enrich the analysis and identify broader trends throughout the livestock sector as a whole. This book is a significant addition to the literature on China's agricultural economy. It is an especially valuable resource for researchers, policy makers and industry participants concerned with China's ruminant livestock and meat sector.

Air Emissions from Animal Feeding Operations: Current Knowledge, Future Needs discusses the need for the U.S. Environmental Protection Agency to implement a new method for estimating the amount of ammonia, nitrous oxide, methane, and other pollutants emitted from livestock and poultry farms, and for determining how these emissions are dispersed in the atmosphere. The committee calls for the EPA and the U.S. Department of Agriculture to establish a joint council to coordinate and oversee short- and long-term research to estimate emissions from animal feeding operations accurately and to develop mitigation strategies. Their recommendation was for the joint council to focus its efforts first on those pollutants that pose the greatest risk to the environment and public health.

The use of drugs in food animal production has resulted in benefits throughout the food industry; however, their use has also raised public health safety concerns. The Use of Drugs in Food Animals provides an overview of why and how drugs are used in the major food-producing animal

industries—poultry, dairy, beef, swine, and aquaculture. The volume discusses the prevalence of human pathogens in foods of animal origin. It also addresses the transfer of resistance in animal microbes to human pathogens and the resulting risk of human disease. The committee offers analysis and insight into these areas: Monitoring of drug residues. The book provides a brief overview of how the FDA and USDA monitor drug residues in foods of animal origin and describes quality assurance programs initiated by the poultry, dairy, beef, and swine industries. Antibiotic resistance. The committee reports what is known about this controversial problem and its potential effect on human health. The volume also looks at how drug use may be minimized with new approaches in genetics, nutrition, and animal management.

Modern Livestock and Poultry Production paints a very vivid picture of the animal agriculture industry and provides the information necessary to pursue a career in the field. Readers will appreciate the industry overview and the detailed discussions of specific species. The author introduces the reader to a variety of major and minor farm animal species, including such topics as breeds, marketing, feeding and management of the species and common diseases and parasites. All of the information presented is based on the latest research available. Beyond discussion of the animals, the book takes a close look at career opportunities and job expectations in the field. Additionally, the reader will find this book useful on a long-term basis as it addresses very specific nutrition needs and feeding requirements of such animals as horses, ponies, goats, sheep, beef cattle, swine, rabbits, hens, ducks and more.
