HALLIE BEARD

The First Man in Rome HarperCollins

With extraordinary narrative power, New York Times bestselling author Colleen McCullough sweeps the reader into a whirlpool of pageantry and passion, bringing to vivid life the most glorious epoch in human history. When the world cowered before the legions of Rome, two extraordinary men dreamed of personal glory: the military genius and wealthy rural "upstart" Marius, and Sulla, penniless and debauched but of aristocratic birth. Men of exceptional vision, courage, cunning, and ruthless ambition, separately they faced the insurmountable opposition of powerful, vindictive foes. Yet allied they could answer the treachery of rivals, lovers, enemy generals, and senatorial vipers with intricate and merciless machinations of their own—to achieve in the end a bloody and splendid foretold destiny . . . and win the most coveted honor the Republic could bestow.

Caesar Ascending-India Limited Edition is the third volume of the bestselling alternate history series in which Caesar survives the assassination in March of 44 BC and carries out his planned invasion of Parthia. Now that Parthia has been pacified and turned into a Roman province, Julius Caesar sets his eyes on India, the mysterious land that the Macedonian King Alexander could not subdue. Determined to surpass Alexander's achievement, Caesar leads his vast army out of Parthia, and marching with him as always is Titus Pullus and his Equestrians, the famed 10th Legion. Landing on the western coast of northern India, what Caesar has never divulged, even to his most trusted officers, is that he is not going to be satisfied with anything less than reaching the eastern boundary of India, the River Ganges, Alexander's objective three

centuries earlier, but which the Macedonian king failed to attain. In order to achieve this feat, his Legions must first face the famed war elephants of the Indian kingdom of Bharuch, but Caesar faces defeat not only from his enemies, but from the men of his own army when they finally learn that his intention is not to return to Parthia at the end of the fighting season. This campaign in India will prove to be Caesar's most challenging yet, and will be a test for his Legions as they stand and fight the armored behemoths that are the most powerful weapon of their time. This Limited Edition contains a Bonus Chapter and a montage of covers featuring Titus Pullus, Legionary of Rome, and the characters who impacted his remarkable career.

Gemini Ascending: Tempting Eternity, the latest in the Gemini Ascending series of novels, is meant for those who believe the world we live in, the lives that we lead, and the wonders that we see in the universe all have purpose. The unfolding events on Earth over time has created serious consequences for its people, steering them towards an unimaginable fate, one that very few are aware of. However, an immortal, driven to evolve, and a psychiatric patient, whose doctors strive to unravel the secrets hidden in the depths of his mind, could give the Earth a chance, unless they fail in their initial quests. The incredible ending in this latest novel, the women who emerge to take on leadership roles while struggling with their personal relationships, and the breadth of storyline creates a tale, in modern times, similar to that in the "Game of Thrones," and "Lord of the Rings." "...Terranova's concise prose generates memorable scenes." - Kirkus Reviews. "The story triumphantly fuses fantasy with real-world relationships..." - Kirkus Reviews. "A captivating otherworldly sequel that should appeal to both new and returning readers." - Kirkus Reviews

"One of the most intense, thrilling, and aching beautiful stories I've ever read."--Marie Lu, New York Times best-selling author of the Legend trilogy The first in the New York Times bestselling author duo Amie Kaufman and Meagan Spooner's sweeping science fiction trilogy, These Broken Stars is a timeless love story about hope and survival in the face of unthinkable odds. It's a night like any other on board the Icarus. Then, catastrophe strikes: the massive luxury spaceliner is yanked out of hyperspace and plummets into the nearest planet. Lilac LaRoux and Tarver Merendsen are the only survivors. Lilac is the daughter of the richest man in the universe. Tarver comes from nothing, a young war hero who learned long ago that girls like Lilac are more trouble than they're worth. But with only each other to rely on, Lilac and Tarver must work together, making a tortuous journey across the eerie, deserted terrain to seek help. Then, against all odds, Lilac and Tarver find a strange blessing in the tragedy that has thrown them into each other's arms. Everything changes when they uncover the truth behind the chilling whispers that haunt their every step. Lilac and Tarver may find a way off this planet. But they won't be the same people who landed on it.

India's recent economic performance has attracted world attention but the country is re-awakening not just as an economy but as a civilization. After a thousand years of the decline, it now has a genuine opportunity to re-establish itself as a major global power. In *The Indian Renaissance?*, the author, Sanjeev Sanyal, looks at the processes that led to ten centuries of fossilization and then at the powerful economic and social forces that are now working together to transform India beyond recognition. These range from demographic shifts to rising literacy levels, but the most important revolution has been the opening of mind and the changed attitude towards innovation and risk. This book is about how India found itself at this historic juncture, the obstacles that it still needs to negotiate and the future that it may enjoy. The author tells the story from the perspective of the new generation of Indians who have emerged from this great period of change. Published and distributed worldwide by World Scientific Publishing Co. except India, UK and North America

Hugo and Shirley Jackson award-winning Peter Watts stands on the cutting edge of hard SF with his acclaimed novel, *Blindsight* Two months since the stars fell... Two months of silence, while a world held its breath. Now some half-derelict space probe, sparking fitfully past Neptune's orbit, hears a whisper from the edge of the solar system: a faint signal sweeping the cosmos like a lighthouse beam. Whatever's out there isn't talking to us. It's talking to some distant star, perhaps. Or perhaps to something closer, something en route. So who do you send to force introductions with unknown and unknowable alien intellect that doesn't wish to be met? You send a linguist with multiple personalities, her brain surgically partitioned into separate, sentient processing cores. You send a biologist so radically interfaced with machinery that he sees x-rays and tastes ultrasound. You send a pacifist warrior in the faint hope she won't be needed. You send a monster to command them all, an extinct hominid predator once called vampire, recalled from the grave with the voodoo of recombinant genetics and the blood of sociopaths. And you send a synthesist—an informational topologist with half his mind gone—as an interface between here and there. Pray they can be trusted with the fate of a world. They may be more alien than the thing they've been sent to find. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

The History of England: from the Invasion of Julius Caesar to the Year A.D. 1852 Simon and Schuster

Orbital Mechanics for Engineering Students, Second Edition, provides an introduction to the basic concepts of space mechanics. These include vector kinematics in three dimensions; Newton's laws of motion and gravitation; relative motion; the vector-based solution of the classical two-body problem; derivation of Kepler's equations; orbits in three dimensions; preliminary orbit determination; and orbital maneuvers. The book also covers relative motion and the two-impulse rendezvous problem; interplanetary mission design using patched conics; rigid-body dynamics used to characterize the attitude of a space vehicle; satellite attitude dynamics; and the characteristics and design of multi-stage launch vehicles. Each chapter begins with an outline of key concepts and concludes with problems that are based on the material covered. This text is written for undergraduates who are studying orbital mechanics for the first time and have completed courses in physics, dynamics, and mathematics, including differential equations and applied linear algebra. Graduate students, researchers, and experienced practitioners will also find useful review materials in the book. NEW: Reorganized and improved discussions of coordinate systems, new discussion on perturbations and quaternions NEW: Increased coverage of attitude dynamics, including new Matlab algorithms and examples in chapter 10 New examples and

homework problems

Seeing Like a State Macmillan

In the fifth book in the bestselling alternate history series, Caesar Ascending-The Ganges, with his treaty solidified with the Pandya Kingdom of southern India, Julius Caesar sets his sights on the next step of his quest to supplant the only name who precedes his as the greatest general in history, the Macedonian King Alexander. By reaching the sacred Ganges and taking the fabled city of Palibothra in the process, Caesar will have succeeded where Alexander could not. To do this, he must use every bit of his skill, not just in waging war but in statecraft, beginning with the other great kingdom of southern India, the Chola, the bitter rival of young King Nedunj and his Pandya, led by King Karikala. After negotiating a safe passage through the Chola Kingdom, Karikala's son Crown Prince Divakar is provoked into initiating battle with Caesar's 10th Legion as they are marching into Cholan territory as part of the negotiated agreement. Using young King Nedunj's knowledge of Divakar's impetuosity, when the Crown Prince launches an unprovoked attack on the most veteran army in the known world, he is killed by the powerful but volatile substance naphtha, used by Rome to combat the ancient world's most potent superweapon, the armored elephants of the Indian kingdoms. The ramifications of his grisly demise will reverberate, with a king driven mad with grief focusing his blame and hatred on a giant Roman Centurion, blaming Titus Pullus for the death of his son. After many errors, Caesar must decide between returning the thousand miles back to Pandya as the first leg of what will an

arduous journey back to Rome or risk another mutiny by pressing forward. Throughout this extraordinary campaign, Caesar has been able to rely on Titus Pullus and his Equestrians, but that loyalty will be tested as never before if Caesar tries to lead his army beyond the Ganges.

Caesar Ascending-Pandya Outskirts Press

Demonstrates the connection of the astronomical phenomenon known as the precession of the equinoxes with the great cycles of world history, astrology and ancient Hindu Scripture.

These Broken Stars Yale University Press

“One of the most profound and illuminating studies of this century to have been published in recent decades.”—John Gray, New York Times Book Review Hailed as “a magisterial critique of top-down social planning” by the New York Times, this essential work analyzes disasters from Russia to Tanzania to uncover why states so often fail—sometimes catastrophically—in grand efforts to engineer their society or their environment, and uncovers the conditions common to all such planning disasters. “Beautifully written, this book calls into sharp relief the nature of the world we now inhabit.”—New Yorker “A tour de force.”— Charles Tilly, Columbia University

The Bad Bug Book Little, Brown

The Guardian's Best Science Book of 2017: the fascinating science and history of the air we breathe. It's invisible. It's ever-present. Without it, you would die in minutes. And it has an epic story to tell. In Caesar's Last Breath, New York Times bestselling author Sam Kean takes us on a journey through the periodic table, around the globe, and across time to tell the story of the air

we breathe, which, it turns out, is also the story of earth and our existence on it. With every breath, you literally inhale the history of the world. On the ides of March, 44 BC, Julius Caesar died of stab wounds on the Senate floor, but the story of his last breath is still unfolding; in fact, you're probably inhaling some of it now. Of the sextillions of molecules entering or leaving your lungs at this moment, some might well bear traces of Cleopatra's perfumes, German mustard gas, particles exhaled by dinosaurs or emitted by atomic bombs, even remnants of stardust from the universe's creation. Tracing the origins and ingredients of our atmosphere, Kean reveals how the alchemy of air reshaped our continents, steered human progress, powered revolutions, and continues to influence everything we do. Along the way, we'll swim with radioactive pigs, witness the most important chemical reactions humans have discovered, and join the crowd at the Moulin Rouge for some of the crudest performance art of all time. Lively, witty, and filled with the astounding science of ordinary life, Caesar's Last Breath illuminates the science stories swirling around us every second.
