 The International Committee on Large Dams (ICOLD) held its 26th International Congress in Vienna, Austria (1-7 July 2018). The proceedings of the congress focus on four main questions: 1. Reservoir sedimentation and sustainable development; 2. Safety and risk analysis; 3. Geology and dams, and 4. Small dams and levees. The book thoroughly discusses these questions and is indispensable for academics, engineers and professionals involved or interested in engineering, hydraulic engineering and related disciplines.

In three volumes, historian Jole Shackelford delineates the history of the study of biological rhythms—now widely known as chronobiology—from antiquity into the twentieth century. Perhaps the most well-known biological rhythm is the circadian rhythm, tied to the cycles of day and night and often referred to as the “body clock.” But there are many other biological rhythms, and although scientists and the natural philosophers who preceded them have long known about them, only in the past thirty years have a handful of pioneering scientists begun to study such rhythms in plants and animals seriously. Tracing the intellectual and institutional development of biological rhythm studies, Shackelford offers a meaningful, evidence-based account of a field that today holds great promise for applications in agriculture, health care, and public health. Volume 1 follows early biological observations and research, chiefly on plants; volume 2 turns to animal and human rhythms and the disciplinary contexts for chronobiological investigation; and volume 3 focuses primarily on twentieth-century researchers who modeled biological clocks and sought them out, including three molecular biologists whose work in determining clock mechanisms earned them a Nobel Prize in 2017.

L'utilisation et la gestion de l'énergie nucléaire sont des sujets sensibles. Chaque accident nucléaire majeur qui se produit soulève de nombreuses et nouvelles interrogations sur les risques radioactifs pour l'environnement et la biodiversité, et l'impact des radionucléides sur les êtres vivants et la santé. S'inscrivant au cœur du débat public, Le risque radioactif propose une synthèse complète des connaissances actuelles sur les principaux polluants radioactifs de l'environnement (uranium, transuraniens, isotopes radioactifs du césium, du strontium, de l'iode, du tritium, du carbone et de divers métaux de transition...), leur comportement et leur devenir dans les divers compartiments physiques des milieux et au sein des organismes vivants, dont l'homme. Il présente de façon claire et raisonnée : - les fondements de la physique et de la chimie nucléaires ainsi que leurs applications dans différents domaines (militaire, énergie, médecine, industrie...). Il aborde également les notions à connaître d'écologie et de génétique, et rappelle les origines anthropiques des radionucléides dans l'environnement ; - les grands principes de la radioécologie, discipline consacrée à l'étude des radionucléides, le comportement de ces derniers dans l'environnement (atmosphère, hydrosphère et lithosphère), leur mode de contamination et leur effet néfaste sur les organismes non humains ; - les principaux risques radioactifs pour l'homme (exposition, imprégnation), les mécanismes de contamination et leurs conséquences sur la santé (effets des irradiations) ; - les principaux inconvénients de l'utilisation de l'énergie nucléaire que sont les déchets radioactifs et leur gestion, et les accidents nucléaires et leur impact. Véritable ouvrage de référence multidisciplinaire, Le risque radioactif s'adresse aux ingénieurs, techniciens et industriels concernés par l'évaluation, la prévention et la gestion des risques radioactifs, aux responsables « environnement » des entreprises et collectivités ainsi qu'aux autorités de sûreté nucléaire. Il sera également utile aux enseignants et étudiants de troisième cycle ainsi qu'à toute personne souhaitant mieux comprendre le risque radioactif.

The "European Yearbook promotes the scientific study of nineteen European supranational organisations and the Organisation for Economic Co-operation and Development (OECD). Each volume contains a detailed survey of the history, structure and yearly activities of each organisation and an up-to-date chart providing a clear overview of the member states of each organisation. Each volume contains a comprehensive bibliography covering the year's relevant publications.

by MICHEL FOUCAULT Everyone knows that in France there are few logicians but many historians of science; and that in the 'philosophical establishment' - whether teaching or research oriented - they have occupied a considerable position. But do we know precisely the importance that, in the course of these past fifteen or twenty years, up to the very frontiers of the establishment, a 'work' like that of Georges Canguilhem can have had for those very people who were separated from, or challenged, the establishment? Yes, I know, there have been noisier theatres: psychoanalysis, Marxism, linguistics, ethnology. But let us not forget this fact which depends, as you will, on the sociology of French intellectual environments, the functioning of our university institutions or our system of cultural values: in all the political or scientific discussions of these strange sixty years past, the role of the 'philosophers' - I simply mean those who had received their university training in philosophy department- has been important: perhaps too important for the liking of certain people. And, directly or indirectly, all or almost all these philosophers have had to 'come to terms with' the teaching and books of Georges Canguilhem. From this, a paradox: this man, whose work is austere, intentionally and carefully limited to a particular domain in the history of science, which in any case does not pass for a spectacular discipline, has somehow found himself present in discussions where he himself took care never to figure.

The evolution of the living world has not been straightforward process over geological time. On the contrary, it shows episodes of crises separating phases of evolving radiation. This work, presenting an assessment of the paleontological discoveries of the last fifteen years, could be summed up by the formula "the evolution of life on our planet or biodiversity". This book, which combines clarity of presentation with scientific rigor, will be of interest to biologists and geologists as well as teachers, students and all those wishing to extend their knowledge on the subject.

"French Music and Trauma Between the World Wars illustrates that coping with trauma was a central concern for French musicians active after World War I. The losses and violent warfare of World War I shaped how interwar French musicians-from those fighting in the trenches and working in military hospitals to more well-known musicians-engaged with music. Situated at the intersections of musicology, history, sound and performance studies, and psychology and trauma studies, Resonant Recoveries argues that modernists' compositions and musical activities were sonorous locations for managing and performing trauma. Through analysis of archival materials, French medical,

philosophical, and literary texts, and the music produced between the wars, this book illuminates how music emerged during World War I as an embodied technology of consolation. Resonant Recoveries demonstrates that music making came to be understood by French interwar musicians as a consolatory practice that enhanced their abilities to remember lost loved ones, gave them opportunities to perform their grief publicly and privately, allowed them to create healing bonds of friendship, and soothed them with sonic vibrations and the rhythmically regular bodily movements required in order to perform many French neoclassical compositions. In revealing the importance music making held for interwar French musicians, this book refigures French modernist music as a therapeutic medium for creators, performers, and audiences, while also underlining the importance of addressing trauma, mourning, and people's emotional lives in music scholarship"--

The Phenomenology of Man and of the Human Condition Jones & Bartlett Learning

Inspired by a postgraduate French studies conference (University of Nottingham, 10 September 2008), this volume explores linguistic form and content in relation to a variety of contexts, considering language alongside music, images, theatre, human experience of the world, and another language. Each essay asks what it is to understand language in a given context, and how, in spite of divergent expressive possibilities, a linguistic situation interacts with other contexts, renegotiating boundaries and redefining understanding. The book lies at the intersection of linguistics and hermeneutics, seeking to (a) contextualise philosophical and linguistic discussions of communication across a range of media and (b) illustrate their intimate relations, despite differing strategies or emphases. Puisant son inspiration dans un colloque de French studies pour doctorants (Université de Nottingham, 10 septembre 2008), cet ouvrage étudie forme et contenu linguistiques en relation avec différents contextes, considérant le langage conjointement avec la musique, les images, le théâtre, l'expérience du monde et un autre langage. Chaque chapitre dissèque la compréhension du langage dans un contexte donné, et se demande comment, en dépit de possibilités expressives divergentes, une situation linguistique interagit avec d'autres contextes, redessinant leurs frontières et redéfinissant la compréhension. Ce livre, situé à l'intersection entre la linguistique et l'herméneutique, a pour but de (a) contextualiser les discussions philosophiques et linguistiques sur la communication dans une gamme de médias et (b) démontrer leur relation intime, malgré des stratégies ou intentions différentes.

Dictionary of Medicine Schreiber, Shengold Publishing

Winner of the Jean-Pierre Barricelli Prize given by the International Conference on Romanticism This original study explores the new idea of theory that emerged in the wake of the French Revolution. Leon Chai sees in the Romantic age a significant movement across several broad fields of intellectual endeavor, from theoretical concepts to an attempt to understand how they arise. He contends that this movement led to a spatial treatment of concepts, the primacy of development over concepts, and the creation of metatheory, or the formal analysis of theory. Chai begins with P. B. Shelley on the need for conceptual framework, or theory. He then considers how Friedrich Wolf

and Friedrich Schlegel shift from a preoccupation with antiquity to a heightened self-awareness of Romantic nostalgia for that lost past. He finds a similar reflexivity in Napoleon's battle plan at Jena and, subsequently, in Hegel's move from substance to subject. Chai then turns to the sciences: Xavier Bichat's rejection of the idea of a unitary vital principle for life as process; the chemical theory of matter developed by Humphry Davy; and the work of Évariste Galois, whose proof of the solvability of equations using radicals ushered in the age of metatheory. Chai concludes with reactions to theory: Coleridge's proposal of the conflict between reason and understanding as a model of theory, Mary Shelley's effort to replace theory with a different kind of relationship to external others, and Hölderlin's reflection on the limits of representation and the possibility of fulfillment beyond it.

Romantic Theory TheBookEdition

Life appears ungraspable, yet its understanding lies at the heart of current preoccupations. In our attempt to understand life through its origins, the ambition of the present collection is to unravel the network of the origin of the various spheres of sense that carry it onwards. The primogenital matrix of generation (Tymieniecka), elaborated as the fulcrum of this collection, elucidates the main riddles of the scientific / philosophical controversies concerning the status of various spheres that seek to make sense of life.

Le livre de l'interne en réanimation est un guide indispensable à l'interne et au chef de clinique en réanimation. Pratique et synthétique, il rassemble en 27 chapitres toutes les pathologies susceptibles d'être prises en charge en réanimation médicale, chirurgicale ou polyvalente. Sont traités : - les différentes techniques de réanimation ; - la ventilation mécanique ; - tous les types de pathologies infectieuses, métaboliques, circonstancielles ; - les états de choc ; - les troubles de l'équilibre hydro-électrolytique, de l'endocrinologie, de l'appareil digestif ; - la chirurgie cardiaque et la neurochirurgie ; - les bases de réanimation pédiatrique ; mais aussi la réanimation en traumatologie, en obstétrique, la toxicologie, les prélèvements d'organe, des notions d'organisation des soins et d'éthique... Ce livre est agrémenté de nombreux schémas, arbres décisionnels et tableaux ainsi que d'un index facilitant la recherche par mots-clés. Cet ouvrage s'adresse aux étudiants préparant l'examen classant national, aux internes de médecine d'urgence, d'anesthésie-réanimation ou de réanimation médicale et aux praticiens de toutes spécialités.
