Getting Smart Springer

This edited volume provides a critical discussion of theoretical, methodological, and practical developments of contemporary forms of educational technologies.

Specifically, the book discusses the use of contemporary technologies such as the Flipped Classroom (FC), Massive Open Online Course (MOOC), Social Media, Serious Educational Games (SEG), Wikis, innovative learning software tools, and learning analytic approach for making sense of big data. While some of these contemporary educational

technologies have been touted as panaceas, researchers and developers have been faced with enormous challenges in enhancing the use of these technologies to arouse student attention and improve persistent motivation, engagement, and learning. Hence, the book examines how contemporary technologies can engender student motivation and result in improved engagement and learning. Each chapter also discusses the road ahead and where appropriate, uses the current trend to predict future affordances of technologies.

Evaluability

assessment (EA) can

lead to development of sound program theory, increased stakeholder involvement and empowerment, better understanding of program culture and context, enhanced collaboration and communication, process and findings use, and organizational learning and evaluation capacity building.

Evaluability

Assessment: Improving Evaluation Quality and Use, by Michael

Trevisan and Tamara

Walser, provides an up-to-date treatment of EA, clarifies what it actually is and how it can be used,

demonstrates EA as an approach to evaluative inquiry with

multidisciplinary and global appeal, and identifies and

describes the purposes and benefits to using

EA. Using case examples contributed by EA practitioners, the text illustrates important features of EA use, and showcases how EA is used in a variety of disciplines and evaluation contexts. This text is appropriate as an instructional text for graduate level evaluation courses and training, and as a resource for evaluation practitioners, policymakers, funding agencies, and professional training. “The most impressive aspect of this book is that it positions EA as an approach that perfectly fits within the current philosophical views on program evaluation... The authors do a great job connecting these theories to practice, and provide good

guidelines.”

—Sebastian Galindo-Gonzalez, University of Florida “This book is focused on one very important topic in the scope of program evaluation content. It establishes the foundation for a variety of applications: impact assessment, program development, and formative evaluation. This text provides new insights and methods for conducting evaluability assessment.” —S. Kim MacGregor, Louisiana State University “The book is written in a very readable style, is well organized and referenced. I like the inclusion of case studies, guidelines for actually doing EA, and the extensive discussion of its alignment with other models of evaluation

process.” —Iris Smith,
Emory University

This volume examines the advantages and limitations of the major gene delivery systems and offers guidelines to select the most appropriate viral or synthetic delivery system for specific therapeutic applications. It discusses advances in the design, optimization, and adaptation of gene delivery systems for the treatment of cancerous, cardiovascular, pulmonary, genetic, and infectious diseases.

Basic Books

Peterson's Graduate Programs in the Humanities, Arts &

Social Sciences 2014 contains comprehensive profiles of more than 11,000 graduate programs in disciplines such as, applied arts & design, area & cultural studies, art & art history, conflict resolution & mediation/peace studies, criminology & forensics, language & literature, psychology & counseling, religious studies, sociology, anthropology, archaeology and more. Up-to-date data, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs,

postbaccalaureate distance degrees, faculty, students, requirements, expenses, financial support, faculty research, and unit head and application contact information. There are helpful links to in-depth descriptions about a specific graduate program or department, faculty members and their research, and more. There are also valuable articles on financial assistance, the graduate admissions process, advice for international and minority students, and facts about accreditation, with a current list of accrediting agencies.

A Book of Abstract Algebra John Wiley & Sons

This text for an undergraduate junior or senior course covers the most common elements necessary to design, execute, analyze, and document an engineering experiment or measurement system and to specify instrumentation for a production process. In addition to descriptions of common measurement systems, the text covers computerized data acquisition systems, common statistical techniques, experimental uncertainty analysis, and guidelines for planning and documenting experiments. The

authors are affiliated with the school of engineering at San Francisco State University. Annotation (c)2003 Book News, Inc., Portland, OR (booknews.com)

In a world where advanced knowledge is widespread and low-cost labor is readily available, U.S. advantages in the marketplace and in science and technology have begun to erode. A comprehensive and coordinated federal effort is urgently needed to bolster U.S. competitiveness and pre-eminence in these areas. This congressionally requested report by a pre-eminent committee makes four recommendations along with 20

implementation actions that federal policy-makers should take to create high-quality jobs and focus new science and technology efforts on meeting the nation's needs, especially in the area of clean, affordable energy: 1) Increase America's talent pool by vastly improving K-12 mathematics and science education; 2) Sustain and strengthen the nation's commitment to long-term basic research; 3) Develop, recruit, and retain top students, scientists, and engineers from both the U.S. and abroad; and 4) Ensure that the United States is the premier place in the world for innovation. Some actions will involve changing existing laws, while others will require

financial support that would come from reallocating existing budgets or increasing them. *Rising Above the Gathering Storm* will be of great interest to federal and state government agencies, educators and schools, public decision makers, research sponsors, regulatory analysts, and scholars.

Introduction to Engineering Experimentation ASM Press

A scientific overview of the association of microbes with cheese, through the lens of select cheese varieties that result due to surface mold ripening, internal mold ripening, rind washing, cave aging, or surface smear rind development. Over the past decade, there has been explosive growth

in the U.S. artisan cheese industry. The editor, Ms. Donnelly, was involved in developing a comprehensive education curriculum for those new to cheese making, which focused on the science of cheese, principally to promote cheese quality and safety. Many of the chapters in this book focus on aspects of that requisite knowledge. • Explains the process of transformation of milk to cheese and how sensory attributes of cheese are evaluated. • Provides an overview of cheese safety and regulations governing cheese making, both in the US and abroad, to ensure safety. • Explores how the tools of molecular biology provide new insights into the complexity of

the microbial biodiversity of cheeses.

- Examines the biodiversity of traditional cheeses as a result of traditional practices, and overviews research on the stability of the microbial consortium of select traditional cheese varieties.
- Key text for cheese makers, scientists, students, and cheese enthusiasts who wish to expand their knowledge of cheeses and traditional foods.

A thorough revision of the essential guide to using play therapy in schools Fully updated and revised, *School-Based Play Therapy, Second Edition* presents an A-to-Z guide for using play therapy in preschool

and elementary school settings. Coedited by noted experts in the field, Athena Drewes and Charles Schaefer, the Second Edition offers school counselors, psychologists, social workers, and teachers the latest techniques in developing creative approaches to utilize the therapeutic powers of play in schools. The Second Edition includes coverage on how to implement a play therapy program in school settings; play-based prevention programs; individual play therapy approaches as well as group play; and play therapy with special populations, such as selectively mute, homeless, and autistic children. In addition, nine new chapters have been added with

new material covering:
Cognitive-behavioral

Can we change the

past? The surprising answer to this question can be found in the final chapters of this book. Examining the history of the study of time and presenting in detail the modern state of physical research on the subject, this book is a superb overview of a fascinating subject. The figures who have helped to shape our views on time are presented as real people, in the context of their own times and struggles: from Socrates' troubles in Athens, to the experiences of physicists under the former Soviet Union. In addition Novikov details his own experiences with great Russian and Western physicists, such as Sakharov, Zeldovich, Rees and Hawking. Details of modern

theories in fields such as the possibility of time machines, anomalous flows of time (at black or white

holes) and the possible source of The River of Time are described with authority and clarity.
