 I was the Fool-king of Soho and the number-one slag in the Groucho Club, the second drunkest member of the world's drunkest band. This was no disaster, though. It was a dream coming true.' For Alex James, music had always been a door to a more eventful life. But as bass player of Blur - one of the most successful British bands of all time - his journey was more exciting and extreme than he could ever have predicted. In *Bit of a Blur* he chronicles his journey from a slug-infested flat in Camberwell to a world of screaming fans and private jets - and his eventual search to find meaning and happiness (and, perhaps most importantly, the perfect cheese), in an increasingly surreal world.

ISMB-93 Time Life Medical

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful

study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Rose is a princess, a Cinder, and half-human. She is the last one born of her kind, and on her twenty-first birthday, she must enter the woods and travel to find her Prince, as her sisters did before her. ". . . And we will all dance at the Grand Ball," her sisters would always say. But the Human servants are keeping a secret that could prevent the Cinders from reaching their Happily Ever After....Hidden in Rose's dreams and vision are the answers of the past between Cinders and Humans, and she is quickly running out of time trying to solve their hidden messages. She knows the answer lies in her first clue--identifying an animal she has never seen before--that persistent vision of a furry white animal, holding a gold metal object and exclaiming, "Oh dear! Oh dear! I shall be too late!"

The influenza pandemic caused by the 2009 H1N1 virus underscores the immediate and critical need to prepare for a public health emergency in which thousands, tens of thousands, or even hundreds of thousands of people suddenly seek and require medical care in communities across the United States. *Guidance for Establishing Crisis Standards of Care for Use in Disaster Situations* draws from a broad spectrum of expertise--including state and local public health, emergency medicine and response, primary care, nursing, palliative care, ethics, the law, behavioral health, and risk communication--to offer guidance toward establishing standards of care that should apply to disaster situations, both naturally occurring and man-made, under conditions in which resources are scarce. This book explores two case studies that illustrate the application of the guidance and principles laid out in the report. One scenario focuses on a gradual-onset pandemic flu. The other scenario focuses on an earthquake and the particular issues that would arise during a no-notice event. Outlining current concepts and offering guidance, this book will prove an asset to state and local public health officials, health care facilities, and professionals in the development of systematic and comprehensive policies and protocols for standards of care in disasters when resources are scarce. In addition, the extensive operations section of the book provides guidance to clinicians, health care institutions, and state and local public health officials for how crisis standards of care should be implemented in a disaster situation.

This book explores how the sharing economy models present opportunities and also pose challenges in achieving sustainable development at the base of the pyramid. Through a 3S Framework (sharing, socialization, and social intermediation) and Reformative-Transformative classification, this book demonstrates how sharing economy models offer the potential for more inclusive and sustainable development. The book includes case studies on sharing economy models that offer products and services for free or at prices more affordable than traditional options, while also finding ways toward economic sustainability and inclusive growth. This book identifies how local resources, community social capital, and bricolage could be leveraged in the development of sharing economy models that take into account the specificities of particular communities while ensuring that the solutions can be quickly modified and replicated. Further, this book highlights that sharing economy models leverage the digital revolution to take advantage of cheaper computational capacity and global connectivity, while rapidly adapting to engage with those that have less digital literacy at the base of the pyramid. This edited book aims to present analyses of sharing economy models at the base of the pyramid, identifying characteristics that can be particularly important for sustainable development and barriers that would need to be overcome to realize its full potential. The chapters in this book are contributed by a wide range of academics and scholars who are experts in the field.

Manual of Emergency Airway Management Lippincott Williams & Wilkins

During natural disasters, disease pandemics, terrorist attacks, and other public health emergencies, the health system must be prepared to accommodate a surge in the number of individuals seeking medical help. For the health community, a primary concern is how to provide care to individuals during such high demand, when the health system's resources are exhausted and there are more patients than the system can accommodate. The IOM's Forum on Medical and Public Health Preparedness for Catastrophic Events held a workshop June 10-11, 2009, to assess the capability of and tools available to federal, state, and local governments to respond to a medical surge. In addition, participants discussed strategies for the public and private sectors to improve preparedness for such a surge. The workshop brought together leaders in the medical and public health preparedness fields, including policy makers from federal agencies and state and local public health departments; providers from the health care community; and health care and hospital administrators. This document summarizes the workshop.

This proceedings volume includes the full research papers presented at the First International Conference on Mobile Computing, Applications, and Services (MobiCASE) held in San Diego, California, during October 26-29, 2009. It was sponsored by ICST and held in conjunction with the First Workshop on Innovative Mobile User Interactivity (WIMUI). MobiCASE highlights state-of-the-art academic and industry research work in - main topics above the OSI transport layer with an emphasis on complete end-to-end systems and their components. Its vision is largely influenced by what we see in the consumer space today: high-end mobile phones, high-bandwidth wireless networks, novel consumer and enterprise mobile applications, scalable software infrastructures, and of course an increasingly larger user base that is moving towards an almost a- mobile lifestyle. This year's program spanned a wide range of research that explored new features, algorithms, and infrastructure related to mobile platforms. We received submissions from many countries around the world with a high number from Europe and Asia in addition to the many from North America. Each paper received at least three independent reviews from our Technical Program Committee members during the Spring of 2009, with final results coming out in July. As a result of the review process, we selected 15 high-quality papers and complemented them with six invited submissions from leading researchers, reaching the final count of 21 papers in the program.
