Social Psychology in Action John Wiley & Sons

"Michael Billig's rhetorical approach has been key to the discursive turn in the social sciences. His witty and original book examines argumentation and its psychological importance in human conduct, and traces the connections between ancient rhetorical ideas and modern social psychology. In a new introduction, he offers further reflections on rhetoric and social psychology, discusses the recent scholarship, and allows some forgotten voices in the history of rhetoric to be heard."

Essentials of Thematic Analysis John Wiley & Sons

Can the phenomena of the human mind be separated from the practices of spiritual formation—of growing to have the mind of Christ? Research into the nature of moral and spiritual change has revived in recent years in the worlds of psychology on one hand and theology and philosophy on the other. But psychology and spiritual formation draw upon distinct bodies of research and theory grounded in different methodologies, resulting in conversation that has suffered from a lack of interdisciplinary cross-pollination. Rooted in a year-long discussion held by Biola University's Center for Christian Thought (CCT), this volume bridges the gaps caused by professional specialization among psychology, theology, and philosophy. Each essay was forged out of an integrative discussion among theologians, psychologists, philosophers, New Testament scholars, educators, and pastors around the CCT seminar table. Topics that emerged included relational and developmental spirituality, moral virtue and judgment, and suffering and trauma. *Psychology and Spiritual Formation in Dialogue* speaks across disciplinary divides, fostering fruitful conversation for fresh insights into the nature and dynamics of personal spiritual change. Contributors include Justin L. Barrett, School of Psychology, Fuller Theological Seminary Earl D. Bland, Rosemead School of Psychology, Biola University Ellen T. Charry, Princeton Seminary John H. How much do children's early experiences affect their cognitive and social development? How important is the parent's role in child development? Is it possible to ameliorate or reverse the consequences of early developmental deficits? This vitally important book draws on the latest research from the social sciences and studies on the brain to answer these questions and to explore what they mean for social policy and child and family development. The authors affirm that sound social policy

providing for safe and appropriate early care, education, health care, and parent support is critical not only for the optimal development of children, but also for strengthening families, communities, and the nation as a whole. Offering a wealth of advice and recommendations, they explain: • the benefits of family leave, child care, and home visitation programs; • the damage that child abuse inflicts; • the vital importance of nutrition (and breast feeding) for pregnant women and young children; • the adverse effects that occur in misguided efforts to disseminate research too early; • and more. Written by experts in the field of early child development, care, and education, the book is essential reading for parents and policymakers alike.

Attribution Psychology Press

Attribution concerns the scientific study of naive theories and common-sense explanations. This text provides a thorough and up-to-date introduction to the field, combining comprehensive coverage of the fundamental theoretical ideas and most significant research with an overview of more recent developments. The author begins with a broad overview of the central questions and basic assumptions of attribution research. This is followed by discussion of the ways in which causal explanations determine reactions to success or failure and how our causal explanations of other people's actions shape our behaviour toward them. The manner in which attributions may shape communication, and how people often quite indirectly communicate their beliefs about causality, is also explained. Finally, the issue of changing causal connections in training and therapy is addressed. With end of chapter summaries, further reading and exercises to illustrate key attribution phenomena,

Attribution will be essential reading for students of social psychology and associated areas such as personality, educational, organisational and clinical psychology.

"Psychology for a Better World is for people who believe it is worth trying to make a world in which both our species and the ecological systems we are part of can flourish. The book is based on the latest research in psychology and is jam-packed with action strategies. It offers new ways to think about how people interact in social settings, why we are tempted to stick with what we know, and how the same characteristics that currently keep us hooked into unsustainable practices can be used to move us forward. The final chapter is a guide to help you analyse what you are doing to contribute towards a better world, and how you can be more effective while simultaneously increasing your personal wellbeing."--Back cover.

Psychology and Spiritual Formation in Dialogue Psychology Press

This timely and applied textbook brings together leading scientists to illustrate how key theories and concepts in social psychology help to predict and explain behavior, and can be successfully applied to benefit social and practical problems. It focuses on robust theories and models known for their successful applications and covers a diverse range of settings—spanning classroom interventions, health behavior, financial decision making, climate change and much more. Each chapter comprises of a theoretical section to define the key concepts and summarize the theory, providing evidence for its reliability and limitations from basic research, as well as an application section

that summarizes research in an applied context and provides details about a particular study including the respective application setting. The textbook expertly shows how theory can make meaningful predictions for real world contexts, and isn't afraid to explain the potential hurdles and pitfalls when applying a theory and its underlying set of concepts in a certain context. Crucially, this format moves towards theory testing in applied contexts, enabling a closer examination of why and under what circumstances interventions may be successful in obtaining a desired behavioral or psychological end-state. Among the topics explored: Mindset theory of action phases and if-then planning Quality of motivation in self-determination theory The focus theory of normative conduct Social identity theory and intergroup contact theory Intergroup forgiveness Social Psychology in Action is a critical resource for advanced undergraduate and graduate students in social and cultural psychology, as well as students of behavioral economics seeking to develop a deeper understanding of major theories and applications of the fields. Practitioners working in the areas of organizational behavior and management, health communication, social work, and educational science and pedagogy will also find the volume pertinent to their work.

'Ethnic cleansing', 'institutional racism', and 'social exclusion' are just some of the terms used to describe one of the most pressing social issues facing today's societies: prejudice and intergroup discrimination. Invariably, these pervasive social problems can be traced back to differences in religion, ethnicity, or countless other bases of group membership: the social categories to which people belong. Social categorization, how we classify ourselves

and others, exerts a profound influence on our thoughts, beliefs, feelings, and behaviors. In this volume, Richard Crisp and Miles Hewstone bring together a selection of leading figures in the social sciences to focus on a rapidly emerging, but critically important, new question: how, when, and why do people classify others along multiple dimensions of social categorization? The volume also explores what this means for social behavior, and what implications multiple and complex perceptions of category membership might have for reducing prejudice, discrimination, and social exclusion. Topics covered include: the cognitive, motivational, and affective implications of multiple categorization the crossed categorization and common ingroup methods of reducing prejudice and intergroup discrimination the nature of social categorization among multicultural, multiethnic, and multilingual individuals. **Multiple Social Categorization: Process, Models and Applications** addresses issues that are central to social psychology and will be of particular interest to those studying or researching in the fields of Group Processes and Intergroup Relations.

Multiple Social Categorization Essential Social Psychology Essentials of Thematic Analysis describes the conceptual grounding and processes of thematic analysis - a highly flexible method that produces meaning-based patterns (themes) from qualitative datasets.

Intergroup contact theory has been one of the most influential theories in social psychology since it was first formulated by Gordon Allport in 1954. This volume highlights, via a critical lens, the most notable recent developments in the field, demonstrating its vitality and its capacity for reinvention and integration with a variety of seemingly distinct research areas. In the last two decades, the research focus has been on the variables that explain why contact improves intergroup attitudes and when the contact-prejudice relationship is stronger. Current research highlights that contact is not a panacea for prejudice, but it can represent a useful tool that can contribute to the improvement of intergroup relations. The book includes coverage of a number of previously under-researched fields, which extend the full potential of contact theory within the personality, acculturation and developmental domains. The chapters also examine the methodological advances in the field and the applied implications. The book offers a rich picture of the state of the field and future directions for research that will be invaluable to students and scholars working in social psychology and related disciplines. It aims to provide fertile ground for the development of new, exciting and dynamic research ideas in intergroup relations.
