It is my contention that the table of intentionality (rationality, mind, thought, language, personality etc.) that features prominently here describes more or less accurately, or at least serves as an heuristic for, how we think and behave, and so it encompasses not merely philosophy and psychology, but everything else (history, literature, mathematics, politics etc.). Note especially that intentionality and rationality as I (along with Searle, Wittgenstein and others) view it, includes both conscious deliberative linguistic System 2 and unconscious automated prelinguistic System 1 actions or reflexes. I provide a critical survey of some of the major findings of two of the most eminent students of behavior of modern times, Ludwig Wittgenstein and John Searle, on the logical structure of intentionality (mind, language, behavior), taking as my starting point Wittgenstein's fundamental discovery -that all truly 'philosophical' problems are the same-confusions about how to use language in a particular context, and so all solutions are the same-looking at how language can be used in the context at issue so that its truth conditions (Conditions of Satisfaction or COS) are clear. The basic problem is that one can say anything but one cannot mean (state clear COS for) any arbitrary utterance and meaning is only possible in a very specific context. I analyze various writings by and about them from the modern perspective of the two systems of thought (popularized as 'thinking fast, thinking slow'), employing a new table of intentionality and new dual systems nomenclature. I show that this is a powerful heuristic for describing behavior. Thus, all behavior is intimately connected if one takes the correct viewpoint. The Phenomenological Illusion (oblivion to our automated System 1) is universal and extends not merely throughout philosophy but throughout life. I am sure that Chomsky, Obama, Zuckerberg and the Pope would be incredulous if told that they suffer from the same problem as Hegel, Husserl and Heidegger, (or that that they differ only in degree from drug and sex addicts in being motivated by stimulation of their frontal cortices by the delivery of dopamine (and over 100 other chemicals) via the ventral tegmentum and the nucleus accumbens), but it's clearly true. While the phenomenologists only wasted a lot of people's time, they are wasting the earth and their descendant's future.

It is November 25, 1960, and three beautiful sisters have been found near their wrecked Jeep at the bottom of a 150-foot cliff on the north coast of the Dominican Republic. The official state newspaper reports their deaths as accidental. It does not mention that a fourth sister lives. Nor does it explain that the sisters were among the leading opponents of Gen. Rafael Leonidas Trujillo's dictatorship. It doesn't have to. Everybody knows of *Las Mariposas*—"The Butterflies." In this extraordinary novel, the voices of all four sisters—Minerva, Patria, María Teresa, and the survivor, Dedé—speak across the decades to tell their own stories, from hair ribbons and secret crushes to gunrunning and prison torture, and to describe the everyday horrors of life under Trujillo's rule. Through the art and magic of Julia Alvarez's imagination, the martyred Butterflies live again in this novel of courage and love,

and the human cost of political oppression.

One day Sophie comes home from school to find two questions in her mail: "Who are you?" and "Where does the world come from?" Before she knows it she is enrolled in a correspondence course with a mysterious philosopher. Thus begins Jostein Gaarder's unique novel, which is not only a mystery, but also a complete and entertaining history of philosophy.

Es mi afirmación que la tabla de intencionalidad (racionalidad, mente, pensamiento, lenguaje, personalidad, etc.) que presenta prominentemente aquí describe más o menos con precisión, o al menos sirve como heurística para, cómo pensamos y nos comportamos, y por lo tanto no abarca simplemente filosofía y psicología, sino todo lo demás (historia, literatura, matemáticas, política, etc.). Tenga en cuenta especialmente que la intencionalidad y racionalidad como yo (junto con Searle, Wittgenstein y otros) lo veo, incluye tanto el Sistema Lingüístico deliberativo consciente 2 como las acciones o reflejos inconscientes automatizados del Sistema 1 automatizado. Proporciono una encuesta crítica de algunos de los principales hallazgos de dos de los estudiantes más eminentes de comportamiento de los tiempos modernos, Ludwig Wittgenstein y John Searle, sobre la estructura lógica de la intencionalidad (mente, lenguaje, comportamiento), tomando como punto de partida el descubrimiento fundamental de Wittgenstein -que todos los problemas verdaderamente "filosóficos" son los mismos- confusiones sobre cómo usar el lenguaje en un contexto particular, y por lo tanto todas las soluciones son las mismas- mirando cómo se puede utilizar el lenguaje en el contexto en cuestión para que sus condiciones de verdad (Condiciones de Satisfacción o COS) son claras. El problema básico es que uno puede decir cualquier cosa, pero no se puede significar (indicar COS claro para) cualquier expresión arbitraria y significado sólo es posible en un contexto muy específico. Analizo varios escritos por y sobre ellos desde la perspectiva moderna de los dos sistemas de pensamiento (popularizados como 'pensar rápido, pensar lento'), empleando una nueva tabla de intencionalidad y nueva nomenclatura de sistemas duales.

Demuestro que esta es una heurística poderosa para describir el comportamiento. Por lo tanto, todo comportamiento está íntimamente conectado si uno toma el punto de vista correcto. La Ilusión Fenomenológica (olvido a nuestro Sistema automatizado 1) es universal y se extiende no sólo a lo largo de la filosofía, sino a lo largo de la vida. Estoy seguro de que Chomsky, Obama, Zuckerberg y el Papa serían incrédulos si se les dijera que sufren del mismo problema que Hegel, Husserl y Heidegger, (o que difieren sólo en grado de los adictos a las drogas y el sexo en estar motivados por la estimulación de sus cortices frontales por la entrega de dopamina (y más de 100 otros productos químicos) a través del tegmentum ventral y el núcleo accumbens), pero es claramente cierto. Mientras que los fenomenólogos sólo desperdiciaron mucho el tiempo de la gente, están desperdiciando la tierra y el futuro de sus descendientes.

C. L. (Charles Leonard) Hamblin (1922-1985) received his undergraduate degree in philosophy, mathematics, and physics and an M.A. in philosophy at Monash University. He received a Ph.D. at the London School of Economics in language and information theory. From 1955 to 1985 he was Lecturer then Professor in the School of Philosophy of the University of New South Wales, making lasting contributions to both philosophy and computer science. Hamblin's Fallacies "was the first full-length scholarly book on fallacies since the Middle Ages, and arguably since Aristotle's Sophistical Refutations itself." Jim Mackenzie, Informal Logic "As important as it is as a historical study, Hamblin's Fallacies is even more important today for its signal contribution to our understanding and analysis of informal arguments. . . . with its extensive historical overview and sharp analyses of the logical fallacies." El libro Introducción a la Lógica Matemática parte del reconocimiento de la importancia de la lógica, en el sentido de contribuir con el lector en mejorar sus procesos de argumentación en contextos tanto científicos como coloquiales. Entre los propósitos de este libro está el de servir de texto de consulta para asignaturas como Lógica Matemática o áreas a fines y de ayudar a las personas que se interesan por esta temática a evitar la excesiva axiomatización, de tal manera que les permita hacer uso racional de la duda. El contenido desarrollado en el libro se presenta en siete capítulos que tratan asuntos como la descripción de los sistemas axiomáticos en una ruta histórica de la evolución de la lógica, la relación de las proposiciones con el idioma y bases para una argumentación adecuada, los procesos de deducción proposicional y cuantificacional, estructura lógica de teoremas y métodos de demostración. Cada capítulo del libro inicia con una actividad exploratoria que le permitirá al lector valorar qué tanto conoce sobre el tema. Al final de los capítulos se proponen numerosas situaciones o ejercicios cuyo propósito es lograr un dominio conceptual y contribuir con el desarrollo de destrezas en los temas correspondientes.

La presente publicación se ocupa, en este trasfondo, del rol de la Iglesia católica en América Latina en relación con un desarrollo liberador. Tiene su origen en un congreso que fue llevado a cabo del 19 al 23 de agosto de 2018 por el Stipendienwerk Lateinamerika-Deutschland (Intercambio Cultural Alemán Latinoamericano [Icala]) en colaboración con la Pontificia Universidad Javeriana, con ocasión de la celebración de los cincuenta años de la Conferencia de Medellín. 1968 fue también un año clave para la Iglesia católica en Latinoamérica. Con el impulso de Medellín, ella ha encontrado ciertamente una nueva figura: del lado de los pobres, al servicio de la justicia y de la paz. Si se mira la historia del continente latinoamericano, el entrelazamiento de la Iglesia en el proceso de conquista, las aspiraciones coloniales de la corona española y portuguesa y luego –después de los movimientos de Independencia– las alianzas con las élites de poder político y económico de las nuevas repúblicas, este papel de la Iglesia católica no es para nada una obviedad. La Iglesia católica se ha convertido en religión como fuente para un desarrollo liberador y un nuevo actor social y en una institución reconocida más allá de los círculos eclesiales al servicio de la transformación social, de los derechos humanos, de un desarrollo justo y orientado a los pobres y del compromiso por la paz, recién por medio del proceso de renovación que significó el Concilio Vaticano II (1962-1965) para ella (en relación con la libertad religiosa, los derechos humanos, el diálogo ecuménico e interreligioso, las nuevas estructuras de participación, el significado de los laicos o de los movimientos sociales, etc.) y por medio de la “implementación” de esa renovación en el contexto latinoamericano a través de la II Conferencia General del Episcopado Latinoamericano en Medellín.

Piaget's influence on psychology has been profound. His pathbreaking investigations and theories of cognitive development have set child psychology moving in entirely new directions. His bold speculations have provided the inspiration for the work of others. His studies have been the subject of many books and countless articles. Here Jean Piaget, with the assistance of his long-time collaborator Bärbel Inhelder, offers a definitive presentation of the developmental psychology he has elaborated over the last forty years. The premise of Dimensions of Learning an instructional framework founded on the best of what researchers and theorists know about learning is that five types, or dimensions, of thinking are essential to successful learning. These are (1) positive attitudes and perceptions about learning, (2) thinking involved in acquiring and integrating knowledge, (3) thinking involved in extending and refining knowledge, (4) thinking involved in using knowledge meaningfully, and (5) productive habits of mind. Dimensions of Learning is a valuable tool for reorganizing curriculum, instruction, and assessment. The authors discuss each of the five dimensions in detail and describe hundreds of teaching strategies that support them for example, how to help students construct meaning for declarative knowledge, internalize procedural knowledge, and see the relevance of what they are expected to learn. The authors provide many examples at the elementary and secondary classroom levels. Teachers of grades K-12 can use this information to improve teaching and learning in any content area.

Logic is often perceived as having little to do with the rest of philosophy, and even less to do with real life. Graham Priest explores the philosophical roots of the subject, explaining how modern formal logic addresses many issues.

La obra presenta novedades importantes respecto al tratamiento clásico del tema. Así, en el capítulo cinco, además de los métodos combinatorios clásicos, los Grafos eulerianos y los Grafos coloreados, se presenta una introducción a la teoría de las funciones recursivas, funciones que tienen gran importancia en Computación. En el capítulo seis hay una introducción rigurosa al estudio de las máquinas y autómatas finitos, de importancia hoy en Informática Teórica y Computación. En el capítulo siete se desarrolla con cierta extensión la teoría de Ramsey, que puede considerarse una de las partes más interesantes del análisis combinatorio no elemental y que tiene aplicaciones en la teoría de grafos coloreados.
