This book reports in detail the newly developed Communicative Listening Comprehension Test (CLCT) for the National College English Test (CET) of China. Following the principles of communicative testing in general and test construction approach proposed by Bachman and Palmer (1996) in particular, the project develops CLCT for CET-4 and CET-6. The research begins with the construction of frameworks of listening task characteristics and communicative listening ability.

Subsequently, based on a survey of Chinese college students' English listening needs and an analysis of listening tasks in influential English listening course books and public tests, CLCT-4 and CLCT-6 test specifications are developed. Finally, sample papers are produced and a series of posteriori studies are conducted to examine the difficulty and usefulness of the newly developed notes-completion task type in two CLCT tests. As an example of successful integration of communicative testing theories and test construction practice, this research provides valuable insights into listening test development for other large-scale tests.

Translaboration brings translation and collaboration into dialogue with one another. It theorises new forms of collaboration not only between humans, but also between humans and machines, posits the text as an actor in the translation process, and stresses the potential confluence, rather than opposition, of analogue and digital spaces. The contributors to this volume explore translaboration from a wide range of perspectives and challenge prevalent binaries such as analogue/digital, professional/non-professional, paid/voluntary, individual/collective, production/consumption, among others. Their articles shine a light on the social, political, disciplinary, and ethical implications of the power differentials at play in collaborative translation. Through the lens of translaboration, they probe what translation and collaboration are, should be, and are capable of being. *Encyclopedia of Educational Psychology* SAGE Publications Barron's two-book Regents Algebra II Power Pack provides comprehensive review, actual administered exams, and practice questions to help students prepare for the Algebra II Regents exam. ACT Math Prep For Dummies Simon and Schuster

This book describes the design, development, delivery and impact of the mathematics assessment for the OECD Programme for International Student Assessment (PISA). First, the origins of PISA's concept of mathematical literacy are discussed, highlighting the underlying themes of mathematics as preparation for life after school and mathematical modelling of the real world, and clarifying PISA's position within this part of the

mathematics education territory. The PISA mathematics framework is introduced as a significant milestone in the development and dissemination of these ideas. The underlying mathematical competencies on which mathematical literacy so strongly depends are described, along with a scheme to use them in item creation and analysis. The development and implementation of the PISA survey and the consequences for the outcomes are thoroughly discussed. Different kinds of items for both paper-based and computer-based PISA surveys are exemplified by many publicly released items along with details of scoring. The novel survey of the opportunity students have had to learn the mathematics promoted through PISA is explained. The book concludes by surveying international impact. It presents viewpoints of mathematics educators on how PISA and its constituent ideas and methods have influenced teaching and learning practices, curriculum arrangements, assessment practices, and the educational debate more generally in fourteen countries.
