 The concepts of statistical physics and big data play an important role in the evidence-based analysis and interpretation of macroeconomic principles.

The techniques of complex networks, big data, and statistical physics are useful to understand theories of economic systems, and the authors have applied these to understand the intricacies of complex macroeconomic problems. Recent research work using tools and techniques of big data, statistical physics, complex networks, and statistical science is covered, and basic graph algorithms and statistical measures of complex networks are described. The application of big data and statistical physics tools to assess price dynamics, inflation, systemic risks, and productivity is discussed. This Selected Issues paper on Hungary describes the main factors behind the evolution of output in Hungary since 1990, and examines Hungary's future growth prospects with specific focus on the role that structural and macroeconomic policies can play in enhancing those prospects. In this paper, the shortfall in growth relative to the other advanced transition economies is attributed to relatively slow progress with macroeconomic stabilization, stalled structural reform between 1993 and mid-1995, and specific features in the design of Hungary's reform program. The paper also analyzes debt dynamics in Hungary.

A Financial Times Economics Book of the Year A Times Business Book of the Year A Sunday Independent (Ireland) Book of the Year 'People who like horror films will love this book' Financial Times 'Forewarned is forearmed. Read and pay attention' Martin Wolf 'Not only will the reader be better off after reading this book, but the world will be a better place' Nassim Nicholas Taleb We are heading towards the worst economic catastrophe of our lifetimes - unless we can defend against ten terrifying threats. World renowned economist Nouriel Roubini was nicknamed Dr. Doom until his warnings of the 2008 housing crisis and Great Financial Crisis came true - when it was too late. Now he's back with much scarier predictions, ones that we ignore at our peril. There are no fewer than ten overlapping, interconnected threats that are so serious Roubini describes them as megathreats - with each one potentially amplifying the others. From the worst debt crisis the world has ever seen, to governments pumping out too much money and causing inflation, to borders that are blocked to workers and many shipments of goods, to the rise of a new superpower competition between China and the US, to pandemics and climate change that strike directly at our most populated cities, to the threat to jobs coming from AI, we are facing not one, not two, but ten causes of disaster. Today, we are heading towards a Great Stagflation that will make the 1970s look moderate. There is a slight chance we can avoid it, if we come to our senses - but we must act now.

From Adam Smith's Wealth of Nations to Thomas Piketty's bestseller Capital in the Twenty-First Century, here are the great reads, seminal ideas and famous texts, clarified and illuminated for all. The revised edition will: · include 5-6 new titles addressing some more up to date areas of the subject such as The Bitcoin Standard, The Age of Surveillance Capitalism and Discrimination and Disparities · have a revised introduction to reflect on the current turbulence and challenges facing the global economy over the next decade · have some of the less relevant titles removed 'Something of a modern classic in its own right.' E&T magazine '50 Economics Classics is a celebration of the large imaginative canvasses of the great economists. Butler-Bowdon's choices are broad, interdisciplinary and compellingly idiosyncratic. His chapters are not simply straight summaries of the chosen works, but thoughtful reflections on why we should care about this or that book and what its relevance is for us today. Butler-Bowdon's renderings are done so well that one might never bother going back to the original! Professional economists, students and general readers alike will find much here to delight in and many new byways to explore.' Niall Kishtainy, Fellow in Economic History, London School of Economics
